How about the review on this Ranger Radio?

http://www.eham.net/reviews/review/5011

This brings up the point that the noise blankers on these units are much more effective than those on a lot of the other "ham" rigs. I own a TS-50S Kenwood, the noise blanker isn't anywhere nearly as effective as the one on my RCI-2970DX. I removed the Kenwood and use the 2970DX for my favorite bands 10 and12 meters . It has been my experience that most "CB" type equipment does have more effective noise blanking. I can point out crappy features of the Kenwoods, Yaesu's etc just as easily as folks want to pick apart the RCI stuff.

Hi Charlie,

I'm personally not a Ranger fan, but they make passable gear for newcomers. Might I suggest that although you have some valid points, you shoveling s...er, sand against the tide. Until many of the newer guys migrate to AR and "become the establishment," you are talking to those who are already set in their thinking. Eventually, some OT's will look back and say "my first rig was a RCI-29xx, back when I was still <your choice>." Then I became an ARO and...yada, yada, yada. Perhaps there'll be a newcomer to the manufacturing arena that will draw their ire. Be patient, Charlie, be patient.

73 de Bert
KC2HMN

P.S. From a strict business standpoint, they must be doing something right. They're now advertising with full page color spreads in the major publications, (Even the ARRL!) while more "traditional" manufacturers, like Kachina and Alinco, either pack it in or downsize thier operations. Think RCI's making money? $$$'s still the best lobbying tool, is it not?

Ummmmmmm........I'm still here "ding dong"!
Why in the wide world of sports would you really think an ISP would care
what is posted to a NG as long as it is relatively on-topic for the group
posted in. This is not kiddie porn we are talking about here.

> breaking FCC laws.

This might be how you see it but as usuall, it is not the case. I can only guess that about 95% of ALL radio shops in the country are selling or repairing "illegal equipment and this DOES include HAM radio shops.......YES.......I SIAD HAM RADIO SHOPS! ! ! !
The same people you folks are looking to for answers to questions about radio in this group are the very same people you would be taking your radio to for repair! Bitch all you like but the market will still drive the "underground sales" and that is something you will have little or no control over. As long as there is a demand there will be a supply. There was a time when you had to "know the right people" if you wanted to buy a little power for a radio and even if those days where to come again, equipment will always be available to those who search it out.

That's not exactly an OPEN DISCUSSSION policy is
> it?

Have I ever sent out a cancel message on a post you made?
NO!

>http://www.eham.net/articles/2084

Oh come on Charlie. This guy is talking about not being rude to new hams. He is not discussing whether thinly-disguised illegal CB radios are legitimate or not.

You know as well as I do that RCI found a marketing niche (illegal CB) that enabled them to stay alive during the 10 meter sunspot lull. There is no one that seriously believes this company or any of the others catering to the illegal CB market ever intends to make legitimate ham radios.

And there's nothing Fudd-ish about refusing to coddle illegal CBers. No matter how you slice it, freebanding is not a viable substitute for the novice ham ticket. Freebanders and scofflaws do not deserve any respect from hams. If hams lack of respect for freebanders illegal "hobby" hurts freebanders feelings, then freebanders should change their ways.

Of course, if freebanders stop operating illegally and want to get into ham radio then I believe the majority of hams will welcome them with open arms.

If they refuse to give up illegal CB and approach ham radio with a "bend the rules when you can get away with it" attitude, then they should expect rudeness and rejection.

OK Bimbo, this is what RANGER sent back when I asked about the tone board.
And I can't wait to try the roger beep feature on six! That should liven
things up!

Randy,
The CTCSS tone board will not be installed in the unit direct from the
factory.
Due to the many variations used in different parts of the US, we elected to
allow the user to choose the one that best suits his needs.
However, it can be installed by the dealer you purchase it from.
Jerry

Is the new six meter rig going to come with ctcss installed? Without it, FM
is rather useless.

What's "fascist" about commenting that 25-32 Mhz CB radios thinly
disguised as ham gear are illegal to sell and use?

The laws are right there in black and white. I did not make them up.
Perhaps you should take out some of your displaced anger on the FCC.
I suggest you write to Mr. Hollingsworth (rhollings@fcc.gov) since he
is the one who is driving enforcement regarding this illegal gear.

What use would a freebander have for a six meter radio, and what frequencies do you suggest they may be modded for? As for as the modulation mod, AM is not used on six, or at least it is not around here. If you read the thread back a little, you would notice that it has drifted to discussion about the RCI-5054DX.....Ranger's new six meter rig. If you go to the Ranger website, you can see a picture of it. I still a bit perplexed about the roger beep button on it though. CQ six meters.......CQ six meters......N5ABC......BEEP......I don't think so.

I do agree that the 10 meter versions are *mostly* a trick to get modifiable rigs past customs. HRO and AES selling them does not negate that fact, although the newer DX models are purported to require a special board for out of band operation.

I agree,

I often wonder if these idiots have a brain or not.. if they are in the UK, nothing you tell him means shit, what if he's selling it to someone in the UK? I would imagine he would prefer to do that, also the reason the radio wasnt listed in US currency i would imagine.. I guess it realy hard for these Anti's and the moron's that follow them to grasp such things.. I think they forgot to hand out "Common Sence" to these idiots at birth.. but you know what they say, Once an incest mistake, always an incest mistake..

>i have a brand new cb, new antenna&new 100 watt amp. swr is 2 but my radio is not getting out.<
Take the amp out of line, what happens?
Where is the antenna mounted? Bumper?
Antennas need to be at the highest point for best results. Try to get that SWR down to at least 1.5. If you have to trim the antenna be careful. What kind of antenna?
We need more info to help you.

"If it aint broke, don't fix it"

>"Ok. Once again, a question you refuse to answer...

Ok.

>you have made
>countless accusations against those who violate or would violate Unca
>Sam's communication laws

Not true. I do not accuse someone of breaking the law. If they admit it, then anything I say is not an accusation.

> and made your feelings known about those
>individuals. Now that Leland was shown to have violated federal law, I
>wish your opinion on the situation. Is he a faggot for doing so like the
>antis accused so many others of being for seeking a mod?

Of course not. I have never accused anyone of homosexuality. In fact I think such an accusation is only effective if made to a homophobe. I'm not a homophobe, and I find the whole homosexual attack attitude mildly offensive. But like so many people from both sides keep saying, this is an open forum. It doesn't take many brains to figure out that those attacks are groundless and just intended to inflame. I don't need to use any implication of homosexuality to accomplish the same thing. How many times to I have to point this out before it sinks into your thick little skull?

> He just posted
>about his disdain for women.

So?

> Do I have to share the distinguished title
>of "keyclown" with Leland now? Lest your memory is foggy today, Leland

No, I don't think I need a job right now. But:
- if you ever get tired of working on those toys;
- if you can handle a MIG welder on a 200ft. tower;
- if you want to work with some -real- RF power; and
- if the FCC doesn't disqualify you;
then I can find you a job here that pays pretty well.

Hey everybody, maybe we should all pretend that our CB radios can only put out 4 watts and 12 watts pep. We could pretend that we only have radios with under 100% modulation, 40 channels, nice and sanitary, start our own little Yahoo Newsgroup or something like that.

Oh crap, somebody else has already done that .

Sorry!

My PC-122 is set to deadkey 2 watts. Swings to 8. The limiter, ALC & AMC
are intact. The final was placed in Class B because the AM regulator
could not handle the current demand on it. They have both been recently
realigned by an FCC licensed technician using the proper procedures and
equipment. It is modulated with a Uniden stock mike.

It is then fed through RG8m coax to TS-250, that's usually just set to
preamp. On the occasion that I need it, low setting is used.

I have more respect for a person that may use illegal cb channels and not harm anyone than some jerk that has to insist on how "we" should be rude and reject others. Most hams are tired of receiving bad publicity from a few that rant and rave from their soap boxes about hams are gods and cb is shit . I would bet mr.voobner (no caps on purpose) has dirt in his soap box like everyone else.

: -Aaron-

But Aaron, ANY RADIO can be modified! Hell I even
did it to my TS 830s (have never transmitted beyond a
dummy load though). So do we outlaw them all? Maybe
the FCC could charge them another fee to slip some of
them through!

So what I propose is:

1) These VEC's quit selling out ham tickets to people
they know nothing about, who often don't know or care
about the 100 years of collected knowlege in theory and
operation, then;

2) Restrict new and used sales to licensed amateurs.

But since none of this will work unless VEC's and
sellers are completely vigilant;

3) Quit whining to the FCC and the government to
fix our self-policed hobby before they decide we're
a nuisance and re-allocate everything including 27 Mhz
for 10 GigaWatt broadcasting or paging or whatever!

That's just the kind of thing they do to the other
services about every ten years!

: >
: > 1) Ham radios need not be "type accepted" because
: > they are intended for operation by licensed Hams.
:
: <rest snipped> snipped because you didn't read it?

This is funny!

Reminds me of a neighbor who used to steal
my tools all the time. But he was such a wus
that whenever I caught him in his garage, I'd
pull up with a tow truck and march in and grab
a couple of tool boxes to go!

He'd start whining so I'd open 'em up and
say "Oh wow! A few of these in here really
are yours!, I'll bring 'em back after I get a
chance to sort 'em all out".

LMAO

Wrong. Neither the US - or any state - Constitution grants an individual
the right to transmit on any frequency. An individual's use of the airwaves
in the US is a privilidge which is granted to an individual by the FCC
after the individual has met the FCC specified technical competency
requirements for the frequency(s) in which they desire to transmit.

>and Hams are not the radio spectrum police!
> The FCC currently has that jurisdiction (Only in the US).

And under FCC jurisdiction, the FCC has charged licensed hams with policing
those bands which they have been assigned.

Crossposting Flushed

Nowhere in 46 years of licensed amateur operation have I seen in Part 97 any reference to policing anyone or anything. Oneself perhaps but I never needed a badge for that. Not even a callsign.

Aaron in a debate once you have made your point you move on to the next. I am not attacking you sir nor others, I would not want it to seem that way. I see alot of you fighting about how illegal something is. I myself a longtime ago ventured into this newsgroup with an ego of sorts. Fighting about whatever. and overtime I have grown up, understand what you say will not change someones opinion or there direction. I am only 27 years of age now and I wonder how old some of you maybe. A persons maturity level is of course different from one person to the next , I realize this also. I commend people for standing up for what they belive in. What I do not agree with is spamming of this newsgroup with the same rhetoric and propaganda ever single day against whoever you like. My opinion may mean very little and granted that is acceptable to me. My question to you is this and you may not want to answer it. Why do you feel so compelled to be in the limelight? I have always hoped this would be a newsgroup where people of the common thread could come together and relate. You bring up that something is illegal granted that is your right.
That is all you talk about though. You basically give very little to this newsgroup so why are you here. I do not dislike you at all nor do I dislike anyone. I may not like everything others do but this is America. I think everyone is entitled to an opinion and I notice everyone has a perticular one ftting to there perticular situation. Anyone who wastes there time calling the FCC etc when the person they are calling on has not interfered with them at all seems psycologically destructive. I am not saying it is wrong todo for a legal standpoint but by all means go for it. It is not what do in life that counts it is how you live it. I would think this newsgroup is not everyones everyday focus. I have very little time for this newsgroup, I would enjoey it more if there was less spam to go thru. I can see a few of you being taken off this newsgroup soon. You may go else where to post but do not be suprised when that place is taken off aswell. This is not my job nor will it ever, I only say this becouse if you think someone is not watching you are mistaken. What a person feels about a newsgroup does not matter, there job is to keep spam to a min. I can agree with both sides of course. Abortion for or against is your opinion once you voice it ok. You will not change anything though. Why would you waste your time jumping up and down about something that really psycologically you are just using as a soundboard to vent off agression. Many of you may deny this, that does not matter. Either you know you are doing it or you do not you are still guilty of such. I myself have done that in the past and I look back and think " dam shawn you can be an asshole". Aaron this is not all directed at you so please no to feel as if it is all against you. I am just using this post to wiggle in some thoughts of mine. Which some of you may or maynot agree with. It happens. I might get pissed and focus my attention on someone for fucking my sister if I had one and she was quite young but to focus my attention on someone in a newsgroup. We all should have better things todo. Maybe it is just me and the world is crazy who knows. I am a geek though. So my opinions may not line up with any of the people who frequent this newsgroup. I

may suggest taking a deep breath and saying " I do not give a dam" and move on. Life is to short. MY modivation for writing this is that there is too much spam. FIlitering does not help for the reason that when one persons posts someone replys then everyone goes into war about good vs evil. If you want to hear about good vs evil go to church. Lots of people do not stay on topic so this has modivated me to sling a few words arounds. There is a perticular mating ritual here in louisiana and what is funny my mom told me about it a longtime ago. When a women hits you she likes you. Very odd my mother explained becouse she being from chicago noticed watching her friends. Maybe all this fighting is some type of weird mating ritual. HEH. Then maybet some of you are just assholes like me sometimes. I did fall in love with a women that can piss me off like no other but she is from New Jersey Aaron you take care and everyone else on the newsgroup aswell. Have a nice weekend.

Back in the Bushes...

You can try Burnaby Radio Communications at
http://www.burnabyradio.com/dhtml/ . They did get busted for selling
modified radios a while back but I think they still sell amps. They are
mostly Ham radio but they do have a large CB selection.

Gosh Train, you're the ultimate broken record. Read thru the NG. What
do you see? Posts by Train saying how FCC rules should be ignored,
radios should be modded, amps should be used, etc. etc. etc. Not only
that, you get all bent out of whack if anyone dares contradict you.

> Open discussion protects MY rights as well as yours.

YOU find my opinions annoying. I wonder why? Does it have anything to
do with the fact that I don't go along with your idea of CB? Poor
Train. Too bad you can't shut people up on Usenet like you can on a
local CB channel.

> Come with me to a keydown and start whining that this is
> all illegal and see how far it gets you.

Why don't you go to Riley Hollingsworth's office and start bellowing
about how you "have no reason to operate legally"?

> > Is this what you do on CB? You cannot tolerate a person who does not

There's a few reasons why an ISP would care what their subscribers do
on Usenet. Why don't you read Optonline's Terms Of Service? Pay
special attention to the part about using the service for illegal
purposes or to promote crime or lawbreaking.

Shout all you want, I am not impressed. What ham radio shops and what
illegal gear are we talking about anyway? Got some names and
addresses? And while we're on the subject, why do you think telling
me that hams are engaged in illegal activity (and shouting it in ALL
CAPS) is such a crushing blow to me? I always have maintained that
illegal hams should be dealt with the same as illegal CBers. Hey, if
HAMS are running the illegal CB business, you should be EXTREMELY
freaked out. Hollingsworth can put them out of business twice as fast

that way.

This sounds a lot like like the drug trade. Hmm. You seem to have a
BIG problem with authority...buy cars with cash....advocate
lawbreaking. Just a wild guess: ever been arrested?

> That's not exactly an OPEN DISCUSSSION policy is
> > it?
>
> Have I ever sent out a cancel message on a post you made?

This is probably truer than most believe. Sometimes the most outlandishly vocal opponents can inadvertently do more FOR the cause than against, even if the cause is technically in the wrong.

> dummy load though).

I agree. Not only that, every ham transmitter ever made since the 1940's comes able to transmit above and below the ham bands. But here's a question. How come there aren't crowded "freebands" chock full of illegal pirate ops above and below 160, 80, 40, 20, and 15 meters? The equipment to enable it certainly exists. (No, Tim. Hearing a few spanish speaking comms on 6.995 Mhz does not qualify. It doesn't compare to what's going on around 10/11 meters)

> So do we outlaw them all? Maybe
> the FCC could charge them another fee to slip some of
> them through!

Do you see any difference between a phoney export mobile radio with 10 khz channel spacings, talkback, roger beep, 5 bands of 40 channels, etc......and a TS-830-S? HINT: one is designed to appeal to the illegal CB market.

Sorry to be so cynical, but everyone is dodging the obvious. The illegal export radio market is a growing problem. Pretending that it either doesn't exist or isn't a problem is deceitful.

Even better, forget the credit card and keep your working funds in an interest-bearing checking account, or in a savings account and transfer as needed. If you don't use it within a month drop it into a liquid mutual fund or short-term CD. For normal business you'll never need credit again.

There is still a difference between flopping out a card or feeling the PAIN
and seeing the CASH leaving your hand when you pay $80 to take the wife and
kids out for dinner. It's a psychological thing!

So Aaron, how do you know what's going on up on 10/11 meter if you are just
running a legal stock cb?
Just wondering...

Actually Jeff he is correct, running power anyone can talk around the world.
I run a stock Uniden President Washington base
and with that I have made some rather interesting accidental contacts on
sideband, it is alot more rewarding to make these contacts with less power
than it is running power. I am looking for the day when I get my ticket so I
can experiment with QRP. I am building a Elecraft kit to play with when I
get my ticket.

4495. Back from Houston

Newsgroup: rec.radio.cb
Date: 2001-07-13 11:21:42 UTC
From: Henry County American Red Cross <arcweb@bnnorth.net>
Message-ID: <cVA37.3603$ga2.123433@cletus.bright.net>
Source record: 88635

Well all I am back from Houston, I went down for 3 weeks to assist with the disaster relief effort. I had fun working with people from all over the country, met a lot of really nice people, and enjoyed helping those effected by the flooding. I didn't get much chance to talk on the radio while down there.

>> RCI 2990 for sale $300 with shipping very clean. Power has been turned
>> to allow full linearity adjustment.

"Full Linearity Adjustment"? But that's all that's been done to it, right?

>Will also include all paperwork I
>> have downloaded, ordered, bought or otherwise have acquired for this
>> radio.

Wow! You are heavy into documentation. But wait! Is there more?

>Base also comes with a new D-104 astatic silver eagle desk
>> microphone (RCI BIBLE and associated type stuff).

Okay. Got it. Now let's condense it into one sentence:

"I bought this radio for $500 and got the mod information, but I screwed it up so badly that I want to get rid of it, and if you'll give me some of what I paid for it, I'll give you all the documents I bought or downloaded so you can figure out what I did and try to get the radio working, again."

You mean to tell me that the roger beep is a "switched" feature?! All this moaning and groaning about something that can simply be switched off?! Amusing...absolutely amusing. My first rig had a roger beep that was non-switchable, so removal had to be done 'internally.' My radio never even saw a roger beep as I had it disabled at the time of purchase. I think it's funny that all this hubbub should arise from a feature that can be turned off at the push of a button.

and 0%

I don't use AE just because you had to pay it off each month some years ago. When I traveled almost every week for company business, about 12 years ago, they wanted everyone to get their own personal AE card, I said no way, I used my personal Visa and Master Card. Why? Because the dumb girl doing the expense checks didn't get them done in time way too often to pay off the card each month. AE was sending out notices to those people, who didn't pay on time, threatening to cancel their card, and refuse any further charges, if they didn't start paying them off as required. That meant they had to did in to their own savings for the money when the expense checks were not ready. The "typical" expenses for me were around $2K or more per month, and it was similar to others in the same department too, so the amount of money was not exactly small potatoes. Me I just tacked on the "interest" charges to my next month's expense report when that happened. After a few years the girl doing the checks quit and they got somebody else who did the expense checks on time.

GOD DAM MORON,
Ghez Doug, Frank, Leland, Proziac,
This guy is in England and post an item that
is legal there, but no, Aaron or shall we say
Doug, Frank, Leland, Proziac which ever ones
doesn't have the balls to post under a real name,
starts right away with the quoting of the regs.
for an individual that lives in a foreign country.
You guys are not here to inform, but to
get enjoyment out of seeing people get upset
over this type of action.

THE BAPTIST PREACHER

THERE WAS A PREACHER WHOSE WIFE WAS EXPECTING A BABY.

THE PREACHER WENT TO THE CONGREGATION AND ASKED FOR A RAISE.

AFTER MUCH CONSIDERATION AND DISCUSSION,THEY PASSED A RULE
THAT WHENEVER THE
PREACHER'S FAMILY EXPANDED,SO WOULD HIS PAYCHECK.

AFTER 5 OR 6 CHILDREN, THIS STARTED TO GET EXPENSIVE AND THE
CONGREGATION DECIDED TO
HOLD ANOTHER MEETING TO DISCUSS THE PREACHER'S PAY.

THERE WAS MUCH YELLING AND BICKERING ABOUT HOW MUCH THE
CLERGYMAN'S ADDITIONAL
CHILDREN WERE COSTING THE CHURCH.

FINALLY, THE PREACHER GOT UP AND SPOKE TO THE CROWD, "HAVING
CHILDREN IS AN ACT OF
GOD!"

IN THE BACK OF THE ROOM, A LITTLE OLD MAN STOOD UP AND IN HIS
FRAIL VOICE SAID ....

"SNOW AND RAIN ARE ALSO ACTS OF GOD, BUT WHEN WE GET TOO MUCH, WE
WEAR RUBBERS."

TONTO

A man walks onto an airplane and takes his seat. He looks up and notices the most beautiful woman he has ever seen boarding the plane. He is nervous, and soon realizes that she is walking down the aisle toward him. When she takes the seat right next to him, he is anxious to begin a conversation. He asks, "Where are you flying to today?"

She responds, "To the Annual Nymphomaniac Convention in Chicago." His mind reeling, he asks, "And what do you do at this meeting?"

"Well," she says, "We try to dissolve some of the popular myths about sexuality."

"And what myths are those?" he continues, choking back his excitement.

She explains, "Well, one popular myth is that African American men are the most well endowed, when in fact, it is the Native American man who owns this trait. Also, it is widely believed that the Frenchman is the best lover, when actually it is men of Jewish decent who make the best lovers."

"Very interesting..." the man responds.

Suddenly, the woman becomes very embarrassed and blushes. "I'm sorry," she says, "I just feel so awkward discussing this with you when I don't even know you! What is your name?"

The man extends his hand and replies, "Tonto.....Tonto Goldstein."

Source record: 88649

1) A man comes into the ER and yells "My wife's going to have her baby in the cab!" I grabbed my stuff, rushed out to the cab, lifted the lady's dress, and began to take off her underwear. Suddenly I noticed that there are several cabs, and I was in the wrong one.

2) At the beginning of my shift I placed a stethoscope on an elderly and slightly deaf female patient's anterior chest wall. "Big breaths," I instructed. "Yes, they used to be," remorsed the patient.

3) One day I had to be the bearer of bad news when I told a wife that her husband had died of a massive myocardial infarct. Not more than five minutes later, I heard her reporting to the rest of the family that he had died of a"massive internal fart."

4) I was performing a complete physical, including the visual acuity test. I placed the patient twenty feet from the chart and began, "Cover your right eye with your hand." He read the 20/20 line perfectly. "Now your left." Again, a flawless read. "Now both," I requested. There was silence. He couldn't even read the large E on the top line. I turned and discovered that he had done exactly what I had asked; he was standing there with both his eyes covered. I was laughing too hard to finish the exam.

5) During a patient's two week follow-up appointment with his cardiologist, he informed his doctor that he was having trouble with one of his medications. "Which one?", asked the doctor. "The patch. The nurse told me to put on a new one every six hours and now I'm running out of places to put it!" The doctor had him quickly undress and discovered what he hoped he wouldn't see. Yes, the man had over fifty patches on his body! Now the instructions include removal of the old patch before applying a new one.

6) While acquainting myself with a new elderly patient, I asked, "How long have you been bedridden?" After a look of complete confusion she answered, "Why, not for about twenty years - back when my husband was alive."

7) I was caring for a woman from Kentucky and asked, "So how's your breakfast this morning?" It's very good, except for the Kentucky Jelly. I can't seem to get used to the taste," the patient replied. I then asked to see the jelly and the woman produced a foil packet labeled "KY Jelly."

...and the kicker ...

Pharmacist: A lady walked into a pharmacy & spoke to the pharmacist. She asked: "Do you have Viagra?" "Yes," he answered. She asked, "Does

it work?" "Yes," He answered. "Can you get it over the counter?" she asked "I can if I take two," he answered

To all that doesn't know,
Aaron is not a real person, irregardless of what
he may say or show you. He is an alter ego of
either Doug Adair, Frank Gilliland or Leland Scott.
I am saying this, because this "person" showed up
on rec.radio.cb a few months back when the three individuals above were
being trashed mouth by numerous
people, myself include I'm sorry to say.
Now both Doug and Frank's posts decrease due to complaints to their ISP
for TOS violations. Now, all of a Aaron" was resurrected and his post have
increased,. It was also proved by a couple other individuals that this
person was not who he claimed to be.
So in other words, take everything he says with a grain
of salt, he and others are here only to fan the flames rather
than to inform.

Artificial Aaron (not to be confused with artificial Rhonda) said: The only people that would suffer from having "thinly-disguised-as-ham-radio illegal extended-coverage CB rigs" pulled off the market or severly restricted are the freebanders and outlaw CBers that they are designed for.
-Artificial Aaron-

"Artificial Aaron, this is not necessarily true. Most would just get better radios, HF all mode ham radios for example. By the way, I have a question. How come you never rag on pirate radio? I mean, you use the term pirate radio, but you know not what it means. I mean true, FM pirate broadcasts for your listening pleasure, say, at....oh.., maybe 87.6 on your stereo dial (ah hell, just scan from 86 to 87.9). You know which way to point your aluminum foil for swamp, swamp, swamp music. Do you not feel that these homegrown DJs are stealing huge corporate dollars by luring listeners away from bullshit programming crammed with advertisements for garbage that the enlightened listener wouldn't purchase in a million years? I mean true capital IS being diverted here so an educated person may think that a worthy cause as compared to someone you feel is keying on you or (gasp) even worse, talking DX on a frequency above channel 40. Whattya say?"

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.

.....Frank Gilliland (Sparky@cet.com)

Again, nice speech, twist. And don't forget that -you- were the one that claimed to be questioning the anti's about their positions.

"Only when disproving anything they say."

The only questions you ask are sarcastic, psuedo-rhetorical, meaningless dribble intended only to flame or troll.

"Wrong again as usual. They are never designed as trolls or flames. Critical, yes, especially to the wannabe cb and thought police."

Oh, please spare me! Go back and read your own posts once in a while.

"I don't live in the past, Sparky, nor do I dwell upon it. You go backwards and read my old posts. No trolls from me
If you consider a post of mine a flame, I suggest you research the thread. You will find the flame was being returned or an idiot being debunked.."

If you were to ever pose an intelligent, coherent and relevant question, you would probably get a civilized response.

"No. You guys pick and choose what to answer."

There you go again, making excuses to avoid the issues.
Try it sometime.

"Ok. Once again, a question you refuse to answer...

Ok.
you have made
countless accusations against those who violate or would violate Unca Sam's communication laws

Not true. I do not accuse someone of breaking the law. If they admit it, then anything I say is not an accusation.

"You lie. You accused several here of being queer for ignoring you AND your questions concerning their outside interests."

and made your feelings known about those individuals. Now that Leland was shown to have violated federal law, I wish your opinion on the situation. Is he a faggot for doing so like the antis accused so many others of being for seeking a mod?

Of course not. I have never accused anyone of homosexuality.

"You lie again."

In fact I think such an accusation is only effective if made to a homophobe. I'm not a homophobe, and I find the whole homosexual attack attitude mildly offensive.

"I find any personal attack offensive, but I am secure enough in my person that nothing anyone says bothers me. For many of us, this ng is entertainment, just like the radio. The real true learning takes place in other groups and email."

But like so many people from both sides keep saying, this is an open forum. It doesn't take many brains to figure out that those attacks are groundless and just intended to inflame. I don't need to use any implication of homosexuality to accomplish the same thing. How many times to I have to point this out before it sinks into your thick little skull?

"Nothing you have ever said has ever had an impact or "sinking in" factor with me, nor will that ever be the case."

He just posted
about his disdain for women.

So?

Do I have to share the distinguished title of "keyclown" with Leland now? Lest your memory is foggy today, Leland seeked illegal mods for FRS radios to get ham bands and also sought a way around federal housing laws in order to construct an antenna. Many of Leland's statements directed at cbers since those posts proved hyper-hypocritical, no?"

I guess you will have to discuss that with Leland.

"No. I am asking your opinion of it. You said to pose a question politely and I would be surprised by the answer I may get. Your answer did not surprise me. It was quite predictable."

What he does is his responsibility, not mine. I don't answer for him.

Unless, of course, you are afraid of debating the issues with facts and logic.

"Unfamiliar territory for you. "

Then you haven't been reading my posts.

"Most don't."

> bands 10 and12 meters . It has been my experience that most "CB" type
> equipment does have more effective noise blanking. I can point out crappy
> features of the Kenwoods, Yaesu's etc just as easily as folks want to pick
> apart the RCI stuff.

Sure, so can I , but most of the other rigs are at least stable. Note
the report on the CW chirp. The rig is unstable. I assume the
regulation is not too hot. If the supply voltage was critical, the rig
would probably "FM" in the SSB mode. There is no excuse for an
unstable radio, no matter what the price. Heck, my first beater
homebrew novice transmitter, made purely from junk, did not chirp.
Also I note only fast AGC. Boy, I bet this sounds great on SSB. The
pumping effect must be awesome. Now, I'm not against using a ranger as
a ham rig, and could care less about this angle. A ham can run
anything he gets his hands on. The maker would have to deal with any
problems in this area with the fcc, etc. It's the poor performance I
don't care for. And don't think I only pick on the ranger. I also
slammed the ten tec scout for it's "stability" problem they had on the
low bands. The scout would try to adjust itself on the fly and would
make it sound unstable with it's "adjusting". No matter how it happens
, unstable is unstable. No excuse for this in the year 2001 at any
price. Who cares if the NB works if it's unstable. The only small rig
I have right now is the 706, but if it chirped, I'd send it back to
icom. If they couldn't fix it and it was a design flaw, I'd demand my
money back. Doesn't matter what brand it is. Now, I know everyone
doesn't have the money to buy the latest and greatest rig. I can
understand this. BUT, that doesn't mean that a ham should have
sub-standard performance because of this. For the price of a ranger,
they would be better off buying an old used rig that at least is
stable. IE: ic-730 or something along those lines. I bet the price
would be about the same, and the old 730 would eat the ranger for
lunch. And work 80-10 to boot. MK

(Twistedhed) wrote:
Now there's a new one -- a genetic predisposition to rebellion. There
are actually many studies that confront the nature/nurture issue, and
some of them have shown that some people are genetically prone to
violence or alcohol abuse.

"Which would hold true for what I just stated, TYVM."

Not really, since these are secondary effects attributed to frontal-lobe
malfunction, the causes of which can be hereditary.

"Would that be left or right quadrant? There are serious differences.
Not only secondary, but involuntary traits are manifested as well."

These are weak defences in court,

"Whoa! What does that have to do with anything? We are not talking about
a defense for the actions."

however, since humans are endowed with enough cognitive powers to
inhibit most of our biological instincts,

"Really? I don't agree, I think it's about dead even. If you wish
information on theorem suggesting other than what you claim, take it to
email."

especially where the resulting offence requires willful premeditation.

"Agreed."

For once.

"Hehe. Not really. More than you realize, but it's like buried among all
the rest."

To compare

"But I didn't compare them. I cited reasoning based on a country born of
rebellion. Nothing to compare."

  your RF pirating activities to the selfless acts of the American
revolutionaries is just plain offensive -- these people fought and died
for what they believed in. Unless you are willing to do the same, don't
even compare yourself to them, twist.

"You, sir, are the about the last person here I would ever choose to
discuss my patriotism with, for the simple reason you have not a clue

what it entails."

You are probably right, considering all your paranoid, anti-government and conspiritorial delusions,

:)

I think a phychiatrist would be the only person that could possibly understand your take on 'patriotism'. But if you really want to compare, I can simply point out that my sense of patriotism took me to Beirut, while yours shows

"So you are of the fortune telling, psychic seers and gypsy sages. Based on my opinions of communication rules and talking skip you are somehow suddenly mystically aware of my patriotism. And let's not forget who brought up the term "compare". I even reiterated it was NOT to compare, but somehow you felt it necessary to bring up a comparison, now I see why..it was a prelude to blowing your own horn, letting us know you were in Beirut, as if that is supposed to mean something or impress someone. Ego's are relationship killahs. Ask Leland."

clearly when you talk proudly of your ability and practice of breaking federal laws.

"As did your anticber comrade Leland. He's the one that specifically ASKED how to break the law. Twice. You just infer it from me."

Yeah, twist, let's talk patriotism.

"You demonstrated your inability. You somehow equated patriotism with geographical destinations and opinions on communication laws."

As I said before...,
Got any other lame excuses?

"Yea. Beirut."

Hey WebDoc,
If Mr. Voobner would act like a normal human being and not in the distastefully condescending manner he does here, no one would have a problem with him. There are people on this NG that know more about communications than he does and he chooses to treat them like little, misbehaving children. Aaron admits to not having a license. He claims to be "studying" for his ticket. Do you, in all honesty, think it appropriate for him to be behaving in this boorish manner? If it were honest, open, two way discussion he was really after, he would not behave in the manner we have been subjected to. The description fits only too well. Too bad it's not entirely accurate as Mr. Voobner is unlicensed and thus, cannot be referred to as a real "Elmer". Perhaps Jack-Elmer would do? :-)

Aaron is not a licensed amateur. He say's he is "practicing". Perhaps this
is why he rubs so many people the wrong way, or, maybe it's because he acts
like a spoiled child, I really don't know. :-)

Well Richard after the 2003 WARC when they dump the CW requirement then all new Hams with be no-coders. That should give you some reason for joy, more of your fellow Hams to bad mouth about. And with people with an attitude like yours who would want to upgrade anyway if it means bumping in to a bunch on the air like you. No thanks, I'll stick to V/UHF until such time as the license of bad attitude Hams expire, or the Hams expires, which ever occurs first. 8-))

Is this a mobile or base? Dont worry about the 100 watt kicker, if its a stock radio its not driving it to distortion levels anyway. And if it is so what, put that hammer down! Start with you coax and ground. With a ohm/multie meter check for continuity from one end to the other and everything rings out ok. Also make sure you dont have continuity between the shield and the center conductor. Make sure your jumpers are in 3' intervals and that your coax is decent. Anything less then RG 8 would be "un civilized". With what your running there's no reason why you shouldn't see a flat SWR. Do you have a 50 ohm dummy load? If you dont, dont worry we have a few on this list you can use(joke hehe). Disconnect your antenna and connect the dummy load and check your match. If its still 2.0 SWR then you know its down stream from your antenna.
Another question is, where are you trying to get out too? What channel are you talking on? if your trying to talk skip on 6 with 100 watts good luck, unless you have a beam and condition on your side. Sounds like your new to the hobby, welcome! I remember my first frustrations, dont worry there's allot of people on this group who can help you get it right.

Yeah, your comments are dead alright. Your just as bad as Doug. All you want to do is hang out on this news group and wait for your change to pick on something somebody posted, just to stir up the pot a bit. You get your jollies the same way he does by picking the other side of the fence on issues. I don't think you have ever posted anything of any use to anybody on this news group yet that pertains to CB Radio.

4535. Food For Thought...11 Meters, AR, AKCers, RCI, & One Thouroughly Doable Idea!

Newsgroup: rec.radio.cb
Date: 2001-07-13 18:05:47 UTC
From: kc2hmn@arrl.net
Message-ID: <beb0a48b.0107131005.30991fab@posting.google.com>
Source record: 88675

You know, all the banter back and forth re. "Anti-KeyClowns" vs. those who discuss, and arguably encourage, illegal CB and/or "freeband" operations has really got me thinking. (It happens once in a blue moon.) I had a debate teacher who taught us that debate is very much like a street fight. If somebody attacks you with a knife, your first task at hand is to remove the knife from the equation and thus disarm your opponent. "Well, how does that apply here," you ask? The illegality aspect of running amps or out of band operations will always be the knife in the AKCers hand. No matter how good an argument one makes for the "common sense" aspect of 11 meters, the standard reply is that of "but you're in violation of Part 95!" This is technically correct and there's absolutely nothing one can do to refute it, despite the apparent lack of FCC enforcement. Well here's an idea that definitely won't help me win the 'Popular Ham Of The Year' award, but it's certainly doable.

Disarm the AKCers! That's right, take and pass the Technicians exam and enjoy the privileges that come along with answering 35, ridiculously easy, multiple-choice questions. I can hear some of you muttering, "What's this guy been drinking? I'm not giving up my 11 meter band for anybody or anything." Well, let's think about that for a moment.

1. Let's objectively examine the freeband, or at least the "above ch. 40" portion of it as that's where the most action appears to be. This is a 594.8KHz slice of spectrum from 27.4051MHz through 27.9999MHz. It supports DX during the highpoint of the sunspot cycle and is fairly miserable for local communications during that same period. DX openings are present sporadically throughout the low portion of the cycle as well, but local communications become easier. The standard power level seems to be approximately 25 to 55 watts although there are many who run 100 watts and some who even run higher. (I've very rarely run across "Kilowatt Charlie" in the freeband, despite grandiose claims to the contrary.) I don't need to repeat the inherent risks one takes by transmitting there as I think that's been beaten to death in this NG to the point of folly.

2. "What do we get in exchange for this 594.8KHz and how does it benefit me?" Well, I'm only going to focus on two bands for reasons that will become apparent later. As a No-code Technician, you have full access to 6 meters (50.0000MHz through 54.0000MHz) and 2 meters. (144.0000MHz through 148.0000MHz) Hey, that's eight full MHz of collective RF real estate, all modes too! It's legal so there's no AKC badgering to deal with. With the new RCI-5054, all mode access to the

6 meter band is relatively inexpensive via a very familiar interface. Ten-Tec offers a relatively inexpensive transverter that will interface with your present 10/11 meter rig to provide "all" mode access to 2 meters. Yeah, that's right...you don't even have to put "Old Faithful" out to pasture. I personally think the new Ten-Tec is the better choice because it incorporates both 2 and 6 meters with "all" mode capability. ("All" mode for the purposes of this discussion only.) All perfectly legal!

3. Amplifiers, did I mention amplifiers? Check out Mirage, KLM, etc. for 2 and 6 meter amplifiers galore, if that's your thing. All perfectly legal!

4. You certainly don't have to abandon 11 meters. I'd stay active on the legal 40. You certainly don't have to worry about the "freeband" as US operators are but a small portion of the overall 11 meter populace. The AKCers can then move to rec.radio.cb.non-us, or a facsimile thereof.

5. In closing. The next time some irate AKC spouts off about illegal 11 meter operations, ignore it. The next time some irate ham accuses you of turning CB into a de-facto ham band, turn the tables and tell him/her that you'll do just the opposite. The next time some irate curmudgeon of a ham calls you a "CB-Tech," "Lifer-Tech," or a "glorified CBer," just say "why, thank you...I'll take another four MHz of your spectrum, thanks!" Meanwhile, the AKCers will have to find a new reason to live.

Now, I hope that many of you see that this situation is quite easily doable and offers some food for thought for ALL parties involved. I got this idea because a CBer acquaintance of mine got sick and tired of being heckled by a friend of his who happened to be a ham. They are friends but even friends can step over the line every now and then. Well one day the CBer got his Tech ticket and told the ham that he had decided to relocate the CB legal 40 and the freeband. "I can straight shoot a signal 175 mi. away to my buddy on 2 meter SSB and still work some DX on 6 meter SSB." Well, the heckler's mouth fell agape, as he had never even considered that some CBers/freebanders could trade in approx. 0.595MHz of illegal spectrum for EIGHT full MHz of prime RF real estate...and did I mention that it was all legal? He had been disarmed. (To the point of actually becoming irate. "You can't do that!"..."Oh?")

Here's something to consider as well. I remember about six or seven years ago when many ham operators actually said, "Ranger should try to move into legitimate ham market, rather than sell that junk." I remember it well! I now find it more than a little amusing that Ranger has begun to transition with the RCI-5054, yet still they moan and groan. Well, if and when the MILLIONS of illegals find their way legally onto the 6 meter band, will there be a "renewed" interest in this band. There sure isn't much activity on 6 meters around my geographic region now. The 11 meter freeband will still be bustling

with non-US operators so those frequencies shall still remain unattractive to prospective bidders. Hmm, might some hams actually wish that those "CB-Techs" just go back to the freeband like those Californians buying up WA property, "driving up real estate prices and crowding our resources." Just some food for thought. (Be careful what you wish for...) Bon apetit.

Sounds like you got kicked out to me. You're a minor until age 18 and your parents were legally responsible for you until then. They must have been really displeased with something you did to risk the counts hauling them in for child neglect. The only time I have heard of this happening is when the kid got so screwed up on booze and or drugs the parents can't handle it any more. Judging from the pictures I have seen on your web page over the passed months I would say it was booze.

Got stung on a "bought without seeing a picture" deal. Now
looking for parts for an Eico 777 tube-type CB radio. Need
the receiver VFO tuning capacitor and knob, and the cover
that goes over the crystal compartment on the side of the
cabinet. Any help appreciated. Will buy a complete rig if
necessary and make one good one out of two unknowns.

73,
Dean, K5DH

<heartfelt and sincere but rambling post snipped>

You asked why I seek the limelight so I will answer that. I do not seek the limelight. I get thrust into the limelight by you all. If you don't want me in the limelight, then ignore me. What's so all-fired outrageous about my opinion that it causes such a ruckus in here? Look, I think cb amps are stupid. I think freebanders are dishonest. I also think this whole CB vs ham thing is dumb and counterproductive. I never said "hams were gods and cbers were scum" or even implied such a thing. Honestly, I don't know where people come up with some of the crap that they attribute to me.

Hm. Maybe the problem is that I do not see these people (above) as "heroes". I've read enough of their posts to know they consider 4-watt 40 channel CB to be beneath them. Their interest is in operating outside the law exclusively. So I debate the issue with these people and their supporters. Got a problem with that?

You have never proved or disproved anything, twist. All you do is sit
back and make accusations without backing up shit.

>"I don't live in the past, Sparky, nor do I dwell upon it. You go
>backwards and read my old posts.

You know I do.

> No trolls from me
> If you consider a post of mine a flame, I suggest you research the
>thread. You will find the flame was being returned or an idiot being
>debunked.."

I see, now you open up the entire forum to flame anyone you might
consider to be an idiot. Well hell, twist, that could be anyone, since
you have such a problem accusing others on a whim of being me or
Leland.

>=A0=A0If you were to ever pose an intelligent, coherent and relevant
>question, you would probably get a civilized response.

>Ok.
>you have made
>countless accusations against those who violate or would violate Unca
>Sam's communication laws

>Not true. I do not accuse someone of breaking the law. If they admit it,
>then anything I say is not an accusation.
>
>"You lie. You accused several here of being queer for ignoring you AND
>your questions concerning their outside interests."

You are leaning on your identity crutch again, Roger. Besides, didn't
you just get done saying, "I don't live in the past, Sparky, nor do I
dwell upon it"?

>=A0=A0and made your feelings known about those individuals. Now that
>Leland was shown to have violated federal law, I wish your opinion on
>the situation. Is he a faggot for doing so like the antis accused so

>many others of being for seeking a mod?
>
>Of course not. I have never accused anyone of homosexuality.
>
>"You lie again."

Well then show me the post. After all the times you said I did such
things and I told you to post some proof, you still haven't produced a
single post. Either post some proof of your claim or drop this whole
delusion that I am somebody else. Oh, that's right, I forgot that your
standard of proof is, "because I said so".

> In fact I think such an accusation is only effective if made to a
>homophobe. I'm not a homophobe, and I find the whole homosexual attack

>skull?
>
>"Nothing you have ever said has ever had an impact or "sinking in"
>factor with me, nor will that ever be the case."

Apparently not even the truth.

>=A0=A0Do I have to share the distinguished title of "keyclown" with
>Leland now? Lest your memory is foggy today, Leland seeked illegal mods
>for FRS radios to get ham bands and also sought a way around federal
>housing laws in order to construct an antenna. Many of Leland's
>statements directed at cbers since those posts proved
>hyper-hypocritical, no?"
>
>I guess you will have to discuss that with Leland.
>
>"No. I am asking your opinion of it. You said to pose a question
>politely and I would be surprised by the answer I may get. Your answer
>did not surprise me. It was quite predictable."

Your question was loaded with your accusations, and I wouldn't call
that "polite". Regardless, I sifted through all the bullshit, ignored
the fact that the question was based on those accusations, and
answered your question. Maybe you didn't read the following line....

>What he does is his responsibility, not mine. I don't answer for him.

If you don't like the answer, that's your problem.

Mike,

No where have I ever posted "hams are gods and cb is shit" or ever
implied anything of the sort.

Hams are not gods. CB is not shit. Using illegal CB frequencies DOES
harm others.

I have heard .435 via streaming audio on the web. It sounds like CB.
Are you one of those hams who gets his giggles from trashing certain
ham repeaters and egging on others to do so? If that is the case (and
it sure enough sounds like it) that explains your posts here and your
attitude in general. No wonder you are ashamed to publish your call
letters.

The demise, if it ever makes it to the agenda in 2003, of Morse will not trouble me in the least. But unless and until it happens the reality is 5wpm. I am becoming increasingly convinced that it will NOT make the agenda.

It is not the demise of Morse testing that bothers me, it is the refusal of some to recognize reality. Even that would not be so bad if there were not the endless game of denial. Do something else, become the resident genius in _____, attempt to destroy those who ever passed a code test, flutter and flit from flower to flower spreading joy and happiness, anything to avoid a code test that should take 15-30 days max taking half the time now spent on newsgroups. We OTs are accused of blocking the worthy CTs while the CTs are cluttering this newsgroup pissing on everyone else.

You would find my attitude and that of most others changes dramatically with a 5wpm cert.

In the interim, the reality as I see it is this:

1. The Codeless Tech is not the entry-level license, it is for wives to order bread and milk from her husband on the homeward commute and things of that nature. To call it anything else while a code test exists is fraudulent more to the holder than anyone else. You were sold a bridge. Sorry about the fraud but don't compound it telling me you really own the bridge.

2. Having one is merely a mistake. The sin lies in keeping it. I have noted here and on other forums that CTs present an ethical problem to us OTs simply because accepting you as junior equals is simply enabling a denial of reality. As you have noted, we are nice for three or four months, apply the prod for a while, and then write you off as hopeless. You are 'amateurs' only by grace of a convenient (to the FCC) licensing structure.

You will encounter people with far worse attitudes than mine. You want to see attitude, pass a code test -- your fellow CTs will send you to Coventry on the next slow boat.

Spare me the bullshit about my or anyone else's attitude being a factor in your upgrading. Go out and pass the Extra and prove me wrong. The rules have changed, the privleges have not.

4551. Re: CB antenna for FM car stereo reciever?

Newsgroup: rec.radio.cb
Date: 2001-07-13 20:48:03 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <9inmq3$s4q$3@woodrow.ucdavis.edu>
Source record: 88691

: rooster <news@270.cjb.net> wrote:
: I have an old truck and dont feel like drilling any new holes for a fm
: antenna. I have a 5' base loaded magnamount CB antenna already
: mounted. Can I use it for FM radio broadcasts?

To receive yes... Antenna Specialists makes a nice interface box that does the required isolation and provide the proper "motorola" jack/plug for your auto radio receiver.

To transmit fm broadcast, no.

: Also, what about
: using the same antenna for a mobile scanner antenna? If thats
: possible,

It does work, but not very well. The theory is too broad to explain here in a followup post.

: what about using them both on the same antenna at the same
: time? Im not an antenna guru. I know enough to tune my antenna to my
: radio. Thats about it. Thanks for any help.
: :)
: Austin

No problem Austin, The CB antenna was of course set up for 26/27 mhz and the operation at am and fm broadcast using the Antenna Specialists (or similar) interface box, just provides a circuit to ensure what preformance (which is often very poor) the antenna might offer will get coupled to the proper radio - antenna ports. There are tuned circuits or electronic parts in the interface box which should provide some measure of isolation between a CB and the broadcast radio bands/antenna.

There are combination antennas made to provide some measure of multiband preformance as you might want... but they expensive.

cheers
skipp

Richard since you don't consider 5 wpm such a big deal to learn then why do
you make such a big deal out out it? I can tkink of several things that have
a far better pay back to me in Ham Radio than screwing around learning CW.

> Spare me the bullshit about my or anyone else's attitude being a factor in
> your upgrading.

Your right about that. It does convince me that the more people like you
that wine about everybody needing to learn CW is further edivence that there
is a decreassing need to do so. As far as I am concerned CW has to stand on
its own merits. And right now I don't see any, other than to satisfiy the
ego of other Hams. Until such a time where I need to use CW I don't see any
point wasting my time with it. In the end I think that's what bugs some
Hams, pushing code testing, the most when they honestly have to admit not
every Ham has a need for CW.

> Go out and pass the Extra and prove me wrong. The rules
> have changed, the privleges have not.

I have though about doing just that just for grins and giggles the same way
I did my Tech Ticket, on the spur of the moment and no studying.

>
> Disarm the AKCers! That's right, take and pass the Technicians exam
> and enjoy the privileges that come along with answering 35,
> ridiculously easy, multiple-choice questions.

1. You won't make yourself unpopular with me. Looks like reality from this chair.

2. The truth of Bert's 35 easy questions can be checked at http://www.qrz.com. Some pretty good sample exams are available. It would not surprise me if most of the groupies could pass the damn thing right out of the box. 25 of 35 I believe. While you are at it, try Element 3, the General exam. You probably won't pass but you will not see anything really technical, just a lot of rules, regs, rf safety, band limits, etc. Buy the book and don't make a Federal case out of it.

3. For those doing freeband with ham rigs, the rules do require (for at least three years but I am betting on 13) a 5wpm code test. It is here that a lot of people get their knickers in a major knot. It is a reflex physical activity right up there with Nintendo. Absent the emotion and testosterone, it might take you a month. Download Morse Academy from http://ah0a.org. This is an old and tried bit of software that runs gangbusterly on Windows. Read and follow label directions. It comes out of the box at exam speeds; go to lesson 1 and give it a whirl. Buy a set of cheap earphones or your wife will kill you.

4. Bert has outlined the advantages of the Tech that comes from the 35 question Element 2 rather well. The ten meter area from 28.3 to 28.5 comes with the Tech and the code test. Actually you get four code bands as well but that may not be your cup of tea given that you will never take the code test again.

5. With Element 3 added, you are essentially everywhere. Us Extras, add Element 4, do have exclusive use of half the phone band on 4 amateur bands; on 160, 10, and the three WARC bands (including 12 meters) we are equals. Element 4 can wait unless you are into Slow-scan television.

6. Procedures for taking Amateur exams are at http://www.arrl.org. Cost these days is $10 and bring a photo id to prove you are who you say you are.

Perhaps the Amateur Service has been a bit oversold. There is nothing in the exams that a non-technical person cannot master and in fact not that much that is truly technical at all.

You done good, Bert.

Leland, Leland, I personally don't give a rat's ass whether you or anyone else learns code or not; it is not in my hands. But unless and until 25.5 of the Geneva Treaty is modified, one has to to obtain privileges below 30 MHz prove proficiency at Morse Code. That is reality; meet it or don't but don't bug me about it.

Pass it for all I care. And when you have your certs for Elements 3 and four, you have 365 days to pass a code test or it goes down the drain. I didn't write those rules either. Rotate on your nose and spit nickles if it helps you.

Given that code will be required for at least three and more likely 13 years, it seems that I do have to as an ethical individual continue to advise learning it ASAP in one's radio career. Simple as that.

Dick NBK

Gosh Train, you're the ultimate broken record. Read thru the NG. What do you see? Posts by Train saying how FCC rules should be ignored, radios should be modded, amps should be used, etc. etc. etc.

"Here you go with only the part you see. What we actually have, are repetitive posts by you that are malarkey. The retorts you refer to all blow holes in everything you say."

Not only that, you get all bent out of whack if anyone dares contradict you.

"No, that distinction belongs to you, all you. Your lost YNN and Google prove it."

Open discussion protects MY rights as well as yours.
Your self appointed hall monitor BS is older than the nasty pile of crap in Chuckie's room!

If you had any sense at all, you could see that I cannot stop you from posting your opinion about illegal CB. When I rebut your opinion, you have the option to simply ignore me.

I had you on ignore for months. Feel special now?
I think you can't resist me for long.
But no, you do not have the maturity to do this. Instead, like some spoiled child, you fly into a rage. You seek to SILENCE me completely.

"No one is seeking to silence you, just debunk your cb related BS lies."

No, but your overzelous diatribes are stupid and annoying. When will you understand that?
YOU find my opinions annoying. I wonder why? Does it have anything to do with the fact that I don't go along with your idea of CB? Poor Train. Too bad you can't shut people up on Usenet like you can on a local CB channel.

"No, but one can sure show the world who you are and what you are about."

Come with me to a keydown and start whining that this is all illegal and see how far it gets you. Why don't you go to Riley Hollingsworth's office and start bellowing about how you "have no reason to operate legally"?

Is this what you do on CB? You cannot tolerate a person who does not agree with you so you seek to eliminate them?
Au contrare.....I HAD you in the kill file but reset all just to get a better view of what this group has become. My filters where set

pretty tight there for a while.
I won't stay in your killfile for long. You're the moth and I'm the flame.
All the little nagging
shit posted that this is illegal or that is a violation of this or that is not and has never been what this group has been about. To think that a few whiney do gooders would ever be able to turn this group into their own sterile 40 channel 4 watt group is just something I would or will stand for.

Hey, Ding Dong. You want to discuss illegal CB, go ahead, but expect criticism. You want to sell illegal stuff on the NG, go ahead, but expect to be ratted out to ISP's and FCC.

Ummmmmmm.....I'm still here "ding dong"! Why in the wide world of sports would you really think an ISP would care what is posted to a NG as long as it is relatively on-topic for the group posted in. This is not kiddie porn we are talking about here.

There's a few reasons why an ISP would care what their subscribers do on Usenet. Why don't you read Optonline's Terms Of Service? Pay special attention to the part about using the service for illegal purposes or to promote crime or lawbreaking.

While I am not the only person in here with an opinion, I choose to confront these people with the thing that so irritates them the most. While any of these losers can do is continue to say all I am doing is lining my pockets from all my "illegal" sales, to this I would have to say.....Not a
single amp was sold although I did get over 75 E-Mails from people looking to buy one. Selling them was not the point of the exercise.....The point was and is there people out here that refuse to be told how to conduct themselves and are unwilling to be told what to do by some overzealous twit who happens to have a keyboard and access to this group. All the while these turkeys were flooding the group with their bilge, the majority of
discussion
was still able to occur much to the chagrin of those who tried so hard to see that the only thing this group could do was fight amongst ourselves. There has been a core to this group for years and most are still here reading and replying in mail to questions posed here as it keeps the bitching to a minimum.

Your "core group" seems

"This is clearly an interpretation on your behalf of what the core group constitutes, therefore, null and void."

to exclude people who are not interested in breaking FCC laws.

This might be how you see it but as usuall, it is not the case. I can only guess that about 95% of ALL radio shops in the country are selling or repairing "illegal equipment and this DOES include HAM radio

shops.......YES.......I SIAD HAM RADIO SHOPS! ! ! !

Shout all you want, I am not impressed. What ham radio shops and what illegal gear are we talking about anyway? Got some names and addresses? And while we're on the subject, why do you think telling me that hams are engaged in illegal activity (and shouting it in ALL CAPS) is such a crushing blow to me? I always have maintained that illegal hams should be dealt with the same as illegal CBers.
Hey, if HAMS are running the illegal CB business, you should be EXTREMELY freaked out. Hollingsworth can put them out of business twice as fast that way.

The same people you folks are looking to for answers to questions about radio in this group are the very same people you would be taking your radio to for repair! Bitch all you like but the market will still drive the "underground sales" and that is something you will have little or no control over. As long as there is a demand there will be a supply. There was a time when you had to "know the right people" if you wanted to buy a little power for a radio and even if those days where to come again, equipment will always be available to those who search it out.

This sounds a lot like like the drug trade. Hmm.

"You are familiar with the drug trade?"

You seem to have a BIG problem with authority..

"I certainly do when some clown says I am guilty of a victimess crime. How can one have a crime with no victim?"

buy cars with cash....advocate lawbreaking. Just a wild guess: ever been arrested?

"Always interested in nosing around our outside activities. I tell you let go of my life's tail so you grab on to Trains? Geez!"

That's not exactly an OPEN DISCUSSSION policy is
it?

Have I ever sent out a cancel message on a post you made? NO!

As if you could. (What an ego)

"HAHHAHAHA"

-Artificial Aaron-

Assumption #1: It is not my job to enforce the law.
Response: It is my legal right, moral responsibility, and independant choice to enforce any law I see fit to enforce. But I am not enforcing -- or breaking -- any law by posting in this newsgroup.
Assumption #2: I get upset about the law being broken.
Response: I do not get upset about any CB law being broken. On the contrary, the more RF pirates that break the law the better.
Assumption #3: The breaking of the law does not directly harm me, a

friend, or a loved one.
Response: RF pirates affect me directly in my work.

You could maybe rig up a charging circuit to parallel charge two 6 volt batteries.
Then wire your CB up to the X2 6 volts in series to get your 12 volts.
You will have to balance and shield things I.E. batteries electronically.
But as the other chap said the simple way is to strap a 12 car battery on your carry rack and DX on. If you did get 12 volts you could maybe put yourself a good sized head light on the beasty!

Source record: 88555

you- were the one that claimed to be questioning the anti's about their positions.

"Only when disproving anything they say."

You have never proved or disproved anything, twist. All you do is sit back and make accusations without backing up shit.

"I don't live in the past, Sparky, nor do I dwell upon it. You go backwards and read my old posts.

You know I do.

No trolls from me
  If you consider a post of mine a flame, I suggest you research the thread. You will find the flame was being returned or an idiot being debunked.."

I see, now you open up the entire forum to flame anyone you might consider to be an idiot.
"Nope. Only when one comes at me with BS like you and Leland and Dogie."

Well hell, twist, that could be anyone,

"Could be, but it's not."

since you have such a problem accusing others on a whim of being me or Leland.
=A0=A0If you were to ever pose an intelligent, coherent and relevant question, you would probably get a civilized response.

Ok.
you have made
countless accusations against those who violate or would violate Unca Sam's communication laws

Not true. I do not accuse someone of breaking the law. If they admit it, then anything I say is not an accusation.

"You lie. You accused several here of being queer for ignoring you AND your questions concerning their outside interests."

You are leaning on your identity crutch again, Roger.

Roger? Er, ok, ten four good buddy! Don't avoid it, answer it."

Besides, didn't you just get done saying, "I don't live in the past, Sparky, nor do I dwell upon it"?

"Your point? I said it not to delve in the past, but to show you lied. Again."

=A0=A0and made your feelings known about those individuals. Now that Leland was shown to have violated federal law, I wish your opinion on the situation. Is he a faggot for doing so like the antis accused so many others of being for seeking a mod?

Of course not. I have never accused anyone of homosexuality.

"You lie again."

Well then show me the post. After all the times you said I did such things and I told you to post some proof, you still haven't produced a single post. Either post some proof of your claim or drop this whole delusion that I am somebody else. Oh, that's right, I forgot that your standard of proof is, "because I said so".

"No. It is, "It isn't true just because you said so," but thanks for trying to hack it into something it's not."

In fact I think such an accusation is only effective if made to a homophobe. I'm not a homophobe, and I find the whole homosexual attack attitude mildly offensive.

"I find any personal attack offensive, but I am secure enough in my person that nothing anyone says bothers me. For many of us, this ng is entertainment, just like the radio. The real true learning takes place in other groups and email."

But like so many people from both sides keep saying, this is an open forum. It doesn't take many brains to figure out that those attacks are groundless and just intended to inflame. I don't need to use any implication of homosexuality to accomplish the same thing. How many times to I have to point this out before it sinks into your thick little skull?
"
Nothing you have ever said has ever had an impact or "sinking in" factor with me, nor will that ever be the case."

Apparently not even the truth.

"Nothing."

=A0=A0Do I have to share the distinguished title of "keyclown" with Leland now? Lest your memory is foggy today, Leland seeked illegal mods for FRS radios to get ham bands and also sought a way around federal housing laws in order to construct an antenna. Many of Leland's statements directed at cbers since those posts proved hyper-hypocritical, no?"
I guess you will have to discuss that with Leland.

"No. I am asking your opinion of it. You said to pose a question politely and I would be surprised by the answer I may get. Your answer did not surprise me. It was quite predictable."

Your question was loaded with your accusations, and I wouldn't call that "polite". Regardless, I sifted through all the bullshit, ignored the fact that the question was based on those accusations, and answered your question. Maybe you didn't read the following line....
What he does is his responsibility, not mine. I don't answer for him. If you don't like the answer, that's your problem.

"No. It is your problem. I cornered you like a rabid coon in a willow tree with that question. You have an opinion on everything and everyone when not wanted and when you are asked of it, you are incapable of response. That makes it your problem. You don't know how to respond. It is a communication problem at best, psychological and self damaging at worse."
==========

Twisite Ill answer for him, lets assume 2 things say you are walking on someone private property where it is clearly posted NO Trespassing. You say all hell I don't care I am just cutting across this guys property, no one is going to see me he aint around even to protect his property. So you scamper across the property not harming a thing you just cut across and be on your way, well 2 days after 3 other people said the same thing Hell no one is around well just take our quads across this field, so they start ripping up the property while crossing the other side, About a week later there are a few more guys parked there Bullshitting with each other drinking a few beers, while their friends rip up the property that you so cautiously walked across. Take that as you personally may not be "hurting' anyone, but not paying taxes never "hurt " anyone either, jaywalking doesn't hurt anyone.My antenna being up 100' foot compared to the town ordinance that says 35' hell I am not hurting anyone But they are illegal Bottom Line, I am sure many say aww hell I smoke pot why should I care about talking on the Freeband thats small potatoes. It maybe but it is again still illegal.

> KC2HMN

I might add that you will enjoy the ticket. If enough folks do it, we might
even
start making more progress in the ham bands. Of course, all higher class
tickets
require a 5 WPM code test - easily memorized and passed in a week. The
best part of passing a code test is this (think about this) - now, with a
general
class ticket, my guess is you won't hear ANYTHING more from a couple of
individuals whom I won't mention.

One other aspect - except for a couple of know trouble spots (14.313 comes
to
mind), if there isn't a contest going on you will find you don't need much
power to
work some real DX. Some digital modes support worldwide coverage on a watt
or less. I have personally worked Webster, NY on 10 meters running under 15
watts on SSB - from Guam Island! You'll need a heck of a lot more power
than
that on the bowl!

Thanks for a good post, Bert!

> >
> > Jay in the Mojave
>

> I have heard .435 via streaming audio on the web.

Ok thats not hard to do.

> It sounds like CB.

No its a Amateur Radio Repeater, some even use call signs. You would have a blast going to go to one of the 435 get togethers. The Chilli Cook Off is great. A KW and a set of stacked 13 element beams, mean nothing in capturing the repeater. There are remote bases that have a few hundred watts right at the repeater site that get jammed. Truly a national asset.

CD's are cut with the best shows on 435, there sold at the TRW swap meet. Many collectors collect the 435 news papers, cassette tapes, ball caps, and CD's. The hardest 435 collectors items to find are the old records. But keep an eye on E-bay.

> Are you one of those hams who gets his giggles from trashing certain
> ham repeaters and egging on others to do so?

No sorry to disappoint you. I am way to far to get into the 147.435 repeater. But the entertainment value is priceless. We only have one repeater where I am at. But we can hear 435 on a cold morning. Winter is best.

There are many many beams antennas pointed toward the 435 repeater in the Los Angles, and sounding areas. You can tell because there is no rotator on the beam, but its hard mounted and pointed towards the 435 machine location.

The great part is when the 435 repeater takes a lightening hit, or loses power, all the other Hi Hi repeaters take a direct hit, with all the 435'ers on all the other repeaters, in the LA area.
Priceless.....

> If that is the case (and it sure enough sounds like it) that explains your
> posts here and your attitude in general.

Again this is your opinionated biased conjecture. Which has been shown
to have a significant amount of flawed logic and certain personality
discontinuities.

You need to slide on out the coast here, near the LAX Airport, and get
in good with all the 435'ers, and get to know them, introduce yourself,
have coffee, and join on in with all the fun. Who knows maybe old Norman
will invite you up to Tujunga, for a few beers? I think he's out of
prison now?

> No wonder you are ashamed to publish your call letters.

No again. But you not knowing my call sign is a another form of
entertainment, that you display a lot. Thank you. Again the
entertainment value is priceless.

How come you don't give your call sign?

Anyway I was talking about another 435 frequency, with local traffic,
that is well worth listening to.....

Hello A.E. 3562:

No no not 27.435, but 28.435 MHz, 10 metres.

There a few older genteleman there who talk on this frequency, who fight
and cuss with each other, one has a old 23 channel CB radio converted to
10 meters. There are about 10 to 12 miles from me, but well worth the
entertainment, of listening. After they give their call signs, you'll
know thats them.

Let me know if you hear them.

Source record: 88567

OK, I've decided to put up a base CB antenna again after several years and enjoy the hobby again. I have everything I need but the antenna. I need a suggestion or two on which one to buy. I do not need a beam, just want to hear whats on the air and be heard when I key the mike.

What is the best vertical omni-directional antenna out there right now for the CB band? I figured you guys might be able to lead me in the right direction. Your suggestions are appreciated.

Hello - I've a serious problem!
First , I 'll introduce myself,I am a Amateur from the Netherlands .
So, maybe you can help me out?
I am looking for a specific type of manual, as the original
manual for the Yeasu FT530. What I really want is a copy of the
manual , it may allso in some sort of digital format, preferably Adobe
Acrobat PDF format or just in microsoft-word.

If you do has these resource, access to someone who does, or can
otherwise assist, I'd be interested in exchanging some email-
P.S. sorry for my verry bad englisch language!

Hey all, I found a good radio auction site. Just about everything from A-Z
is there. It's not like ebay that cuts you off. I've found some pretty good
deal
there. Go to http://www.bidfind.com/cobids/cobids.cgi?siteid=cbbf1729
I think you might like this place.....

Been there, done that, burned the fucking tee-shirt because of all the pompous assholes. I continue to feel that CB has become what ham radio was 40 years ago. In a day where hams are no more than buying there ticket by having others take advanced tests for them and there are folks buying radios that you need a degree to get the screws off the case.....I'll pass!

Never , ever use your own money to pay for company expenses.....Unless it is YOUR company. If by some remote chance they fold.....You are left holding the bag for whatever monies you have laid out. If they are such a great place to work for, They would issue you a "company card" and take the risk off your shoulders and onto themselves where it should be to begin with!

Your choice and I would be more than happy to leave you alone with it were
it not for one thing:
The gratuitous crack about ticket-buying.

I was a VE, I know any number of VEs, been there, done that, polish the
trophy with the sweatshirt. I have yet to meet one who bent a rule for
anyone, any place. In fact, in most VE groups the idea is to prevent even
the appearance of impropriety to testees and the amateur community alike.
Often, this is at the cost of more work by the team. With all due respect,
bullshit.

You may not be aware that a single VE cannot do the job, it takes three on
all exams. There is an audit trail on every ticket. It is also a fixed and
solid rule that an applicant provide sufficient ID, a picture drivers
license is the most common, before he is admitted to the site. Besides,
most of us OTs among us know everyone in town capable of passing an exam.
The reduction of the code speed to 5 from 13 and 20 may change that but it
was the rule in your alleged experience. But then 5 wpm is not enough of a
challenge to justify hiring anyone any more.

We are and were required to provide every possible accomodation to physical
handicap. I have administered exams to the blind etc. and in one case to a
man who was terminal. It is not a job one takes for the money or glory, it
is a job you do to give something back to a hobby you enjoy and which often
was tied to your occupation. It is not much more than a lot of work.

I, for one, find your crack personally insulting, totally inaccurate, and
the ravings of someone with a burr in his saddle.

Dick N�BK VE and damned proud of it

You appear to be the one with a burr in the saddle. After posting this I later read a post with the same comment in it about "some people" buying their ticket. You know as well as any of us it happens as much as care is taken to keep it from going on. While you may take the time required to go through ID's on the people you test, it will not stop the ones that are going to a hamfest to get tested with false credentials. I know it happens and I've seen it work! My comment was not aimed at VE's but at the people who do it and bringing it to light that it happens more than the ham community would like to admit to.

I went to the link posted to ebay, to check out the purchase.
Interesting, it said that the COBRA transmits, but no carrier. The
last time I looked, you need a carrier to transmit, so how does the
seller know that it transmits? In this particular case, I would not
have offered one cent for this "transmitter"/CB radio.

Once again, Aaron is given the opportunity to explain his actual connection
to the communication hobby. Once again, he plays the misdirection game,
dissembles, and refuses to explain his position. Nice going, False-Elmer!

1. It would seem reasonable to require a DL at a hamfest. They got there somehow. We can't catch every stupidity but I sure don't want to get the local gendarmes involved and they will be if we catch a phoney DL

2. Yes, it probably does happen and did in the days when the FCC did the exams as well. In fact, some FCC employees got into a major wringer over just that.

3. VEs will take a testees word for a lot of things (not id unless it is a kid when we assume a parent is present) but the VE is required to make note of these and it goes into the report. It is these reports (along with gripes from people who did it honestly) that form the basis for the audits that you read about on the Rain Report. It is not as loosey-goosey as it might appear.

That it happens is inevitable, that it happens often is debatable, that there is considerable risk in yanking the VEs chain is dead fact.

Hi Train,

>Been there, done that, burned the fucking tee-shirt because of all the
>pompous assholes.

While I agree that there are many pompous arses, if you "burn that tee-shirt" and walk away...those a$$holes win. I lost over ten years because of some jerks like that and in the final analysis, the only person I screwed was myself. Tell them that after 35 questions, their 2 meter band is your personal FRS and their 6 meter band is now your personal CB service and YOU win! If you're feeling particularly "pissy," then add in that your giving your money to RCI, the same manufacturer that supported you during your years on the freeband. I've seen this in action and you know what...sometimes it's appropriate and ok to "return fire." It's certainly your choice though and I will ALWAYS respect that without judgement.

>I continue to feel that CB has become what ham radio was
>40 years ago.

I don't agree, but I'm not sure that I fully understand how you mean this.

>In a day where hams are no more than buying there ticket by
>having others take advanced tests for them and there are folks buying radios
>that you need a degree to get the screws off the case.............I'll pass!

I've heard of this happening but I think it's far more the exception rather than the rule. As for the radios and RF theory, you and I both know that there are 11 meter folks out there that are quite competent. Hope you reconsider. Take it easy and thanks for responding.

73 de Bert
KC2HMN

P.S. I hope you didn't take issue with re. to my response in another thread re. your "motivations." I was just trying to diffuse something...and failed miserably. :-/

Of course you do Richard.

You wrote in a prior post in this thread:

"You would find my attitude and that of most others changes dramatically with
a 5wpm cert."

So if you "don't give a rat's ass" then there is no reason for the fact that somebody has or has not passed a CW test to affect your attitude one way or they other. You can't play both sides of the fence.

For your information "de" means "from" in several foreign languages too. It's not ONLY a CW prosign. It's not uncommon for English to use words from a foreign language that then becomes commonly used. A good example of that would be "Detroit" which is the French word for the settlement which later, as everybody knows, is the auto manufacturing capital of the US.

> else learns code or not;

Of course you do Richard.

You wrote in a prior post in this thread:

"You would find my attitude and that of most others changes dramatically
with
a 5wpm cert."

So if you "don't give a rat's ass" then there is no reason for the fact that
somebody has or has not passed a CW test to affect your attitude one way or
they other. You can't play both sides of the fence.

--
73's,

Leland C. Scott
KC8LDO

Not trying to. It is simply that someone who has faced reality and done
what needed to be done is going to get a lot more respect that someone who
does not and bitches about my attitude.

Dick

Hey Bert,

You rebel...this is a marvelous post and a darn great way to address multiple problems with one fell swoop.

>Tell
>them that after 35 questions, their 2 meter band is your personal FRS and
>their
>6 meter band is now your personal CB service and YOU win!

Here's an extra band to your analogy.

70cm = FRS,
2m = MURS,
& 6m = CB

This is all WITHOUT the code, add the code and now you're talking. (Sounds like a good title for an introductory ham book.) There's not much I can add to the positive statements that have already been posted. Thanks for the "winner!"

>If you're feeling
>particularly "pissy," then add in that your giving your money to RCI, the
>same
>manufacturer that supported you during your years on the freeband.

Nice touch. BTW, there's a neat manufacturer of superb quality transverters right here in the Garden State of NJ. Their name is Down East Microwave, just a FYI for those interested. Here's the link.

http://www.downeastmicrowave.com/

>sometimes it's appropriate and ok to "return
>fire."

You've got to work with what your opponent gives you. (But first always try to gain them as an ally rather than an opponent.) Take care and 73.

Mark

If you don't like it, don't join. I only use 40 channels, you won't find me off frequency. I don't care for hamateur radio, you won't find me there.

Are you a snotty hamateur? Do you freeband? Do you have a life?

I really don't care what your answers are. You are a whiny do-nothing.

Hi Jim,

Try the IMAX-2000, it's relatively inexpensive, easy to erect, and requires no radial system. Just be sure to replace the supplied u-bolts and lockwashers with stainless steel relacements. (You can find these in any marine store.)

If money is no object, then Mosley makes the Devant and Devant Special (Add a capacitance hat) omnis. Top notch construction but expensive as heck. Here's the link.

http://www.mosley-electronics.com/citizen_band.htm

Both the IMAX-2000 and the Devant are 5/8 wave antennas and the difference in gain will be undistinguishable. I'd go with the IMAX-2000 at approx. $300.00 less. (No, not a misprint...$300.00!) Take care and 73.

I've used an Antron 99 for several years as have lots of my friends.It is a half wave omnidirectional with an adjustment for swr.It recently got struck by lightening so I'm putting up an Imax 2000 which is a 5/8 wave.Both are good.

>

They ask for alot, I believe 30 DXCC QSL cards (11 meter or ham) and/or references from a current member. They probably think they're a group of 11 meter DX operators, both legal 40 and freeband, many of whom are licensed amateurs. If your club involved "freeband" activity, wouldn't you be a tad discerning re. your membership? Just look at what goes on here in the NG.

The info is here under 'Membership F.A.Q.'

I gotta' tell ya' Dick, this most assuredly happens. Several years ago in Ct., ticket sales were high around the West Haven, East Haven, Milford and New Haven area.
There was a CB / Ham radio shop in Milford that was selling the tickets for the price of a radio and / or accessories. All the VE's either worked for or were close friends of the owner. I'm sure there was a great deal of profit in this for all concerned.
I knew most if not all of the people who suddenly, overnight, without benefit of study, became Generals and higher. I guess the class of lisense was commensurate with the price of the radio. In point of fact, most of these people couldn't tie their own shoe laces without help.
Also, their "new" radios came out of the box enabled on 11 meters. Funny how that worked out isn't it?

I knew most if not all of the people who suddenly, overnight, without benefit of study, became Generals and higher. I guess the class of lisense was commensurate with the price of the radio. In point of fact, most of these people couldn't tie their own shoe laces without help.
Also, their "new" radios came out of the box enabled on 11 meters. Funny how that worked out isn't it?

I gotta' tell ya' Dick, this most assuredly happens. Several years ago in Ct., ticket sales were high around the West Haven, East Haven, Milford and New Haven area.
There was a CB / Ham radio shop in Milford that was selling the tickets for the price of a radio and / or accessories. All the VE's either worked for or were close friends of the owner. I'm sure there was a great deal of profit in this for all concerned.
I knew most if not all of the people who suddenly, overnight, without benefit of study, became Generals and higher. I guess the class of lisense was commensurate with the price of the radio. In point of fact, most of these people couldn't tie their own shoe laces without help.

Who needs a carrier? Ever heard of SSB? Come to think of it, you pick the modulating frequency and I'll pick the deviation on FM - or vice-versa (as long as I get the last pick). I'll show you FM without a carrier too ....

Heck, who needs to buy a ticket? I doubt that it can be done, considering it takes 3 examiners (plus a lot of paper with an audit trail). Besides, the theory is plain dumb stupid simple. Now that the CW is down to 5 WPM, anyone can pass a test inside of a week if they try. What the heck, I let my licenses expire around 1981 and had not operated CW since 1969 ... plus didn't study at all - and gundecked the extra ticket in 1993. How easy do you want it to be? CB is NOT what ham radio was 40 years ago. I hate to tell you this, but I could work the world with less than 20 watts SSB. And could QRO to a kilowatt inside of seconds if necessary (it seldom was). I yakked with Norm, VK2NP, in Brisbane, AU, for hours on end back in the late 60s. Several times every month. On teletype. 160 meters gave me a good range over 70 miles consistently. I used to bang into Washington DC from Rochester (ok, a LOT more than 70 miles). That was GROUNDWAVE. Not what you think is groundwave. So tell me about CB again, please.

73 from Rochester, NY

Take your word for it. These cats would have had to whomp up test papers
and code worksheets on the people involved -- they do go back -- and take
one hell of a risk for what amounts to peanuts. Kicking over that can
requires only one honest man -- or one who failed -- to make a phone call
and the walls come a tumblin down.

Got more respect for Sadie the Good-Hearted Prostitute.

Like you I let my tickets expire, in my case because of the Nam (still got hustled by one of the intelligence units to copy the 300 lb Russian female 'fishing boat' ops -- no thanks) and went in to take them again. In those days, you had to be on for a year to take the Extra. When I got by the code test and handed her Element 3 about 27 seconds after she had gotten done passing out the papers she dug into the bag and gave me a 4a that must have been preserved for special occasions and as I got into it I knew what the special occasion was. She had decided I must be some CB whiz and got an exam with every piece of CB mythology that could be fitted into 50 questions. I would suspect that exam could still be used, mythology dies hard. Even had the famous coax length question.

As I think I have mentioned before, you are contrasting a multi-band generally fixed but increasingly mobile activity with one that it mobile for the most part and dedicated to bleeding the most out of a part of the spectrum that no one else wants. Different games entirely.

Like you, with Amateur exams becoming almost trivial (although growing up with it or doing it for the bloomin' Naivy distorts one's perception a bit) I find it hard to believe more do not do it and gain the freedom to rat around the spectrum legally. Not all of Amateur radio is 20 and 75 nets. I

am coming to love 12 and 17 meters and between them they are not 23 channels wide.

I don't think either of us is on a recruitment campaign but it does make you wonder.

Dick N&#65533;BK aging boy wonder

Hello Paul: Welcome to the group!

I have made friends all over the world on this news group. Found rare and hard to find CB and Ham Radio items, old out of production manuals, parts pieces, antennas, radios, amps, and the best is what can be learned here.

I have meet people from all over, gotten inputs, advice, arguments, questions, neat "How to" tricks of the trade ect.

There's always some good web sites shown for taking your ham license, parts, pieces, equipment, technical talk, antennas, installations, some even throw out when a good magazine article is out, and all that.

Hope you find the news group as interesting as I do.

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

Hello Scott: Yes I agree, that the 5/8 wavelength ground plane antenna will have stronger field strength on receive and transmit.

I use to use a A99 antenna for using on top of the local Mountain top here in Southern California. Early on Saturday we would 4 wheel drive up some of the roads to get to the top. Lots of times the Hams where there to, talking all over the place also. We use to show each other who we could hit, or talk to. Set up the A99 and talk all over the south land, Bakersfield, San Diego, Ventura, Catalina Island, Death Valley, Barstow, and generally all over. Even a few fishing boats down into Mexico to almost Point Conception.

But not having line of sight to almost all the southern California stations, at home you will see a advantage using a 5/8 WL over the 1/2 WL A99.

Use your brain people,Voobner is an FCC "narc".He is obcessed with the arrest,conviction,and incarceration of every lawabiding taxpayer,whose only crime is jabbering on the cb radio on some off frequency that nobody uses anyway.I am very knowledgable about this because I constantly monitor the rf spectrum from25.000mhz to29.999. Most of the time,except for an occasional amateur on the 10 meter amateur band,the only thing I hear is South American amateurs.I don't hear any life saving communications going on.In fact most of the time I hear NOTHING!!!!!! So wise up people,this is not just about using a few illegal frequencies,it is about theGov't trying to keep us from communicating.First they want our guns then they want our radios,andBoobner is one of them.Well I don't know about the rest of you,but they will get my guns and radio when they pry my cold dead hands and fingers from around them.....73's

Why you are right, I must go right to the auto groups and turn in
anyone selling a performance enhancement device. I must go to the
cable groups and turn in the black box devices. I'll hop right over
to the hack groups, because what they discuss there is highly illegal.

Why? because my name is Leland Scott and this my alter ego talking,
and I can't make him stop, please help me!

He did not mention that it is SSB. In fact, take a look at the
picture of the radio. In most cases, do you think that someone who
has a transmitter that works would say that it has no carrier? Before
you do the carrier suppression for SSB or DSB, you have to have a
carrier to suppress. If you have no carrier to suppress, there is no
way to modulate it, AM, FM, PM, TTY or whatever. What I got from the
description on ebay, is that the transmitter is inoperative. Unless
you tear into the radio, how do you find out that there is no carrier,
but the transmitter is working. The seller did not tear into the
radio, his words. Conclusion: The transmit light probably comes on,
but there is no output, hense no carrier. You have to be extremely
careful in buying something sight unseen, especially from ebay or any
auction house where the seller says anything he wants to about what he
is selling.

Yes,
The intended use for those radio's are cb, forget the ones that
bonafide 10 meter hams use. Also I asked a while back for a mod
that would allow me to go out of band on FRS, it's ok, and I won't
tell on you for the information, we're hams.

Hi
Just found this NG so I'd better find out what rules are.
I have about 40 assorted CB items for sale.
Freq.counter,cheap rigs.swr.mtrs,pwr.horns etc.
Can I post the list on here or can you recommend a site
for this. Ideally I'd like to sell them as a job lot and the
price will be adjusted accordingly.
I also have a Uniden 28/30 to sell separately.
I'm in UK.

Regards M@goo

I have to really question the real reasons for all of the AMATEURS who think they must try to get 27Mc users to repent! Face it AMATEURS, your not wanted! Have your bands become so BORING that you must hang out here on a CB group? We like the freedom that we have on 27Mc! We like having powerful radios that we can buy at truck-stops or HRO. Who the hell needs a license!?!?!?!

But I must make this invitation to all of you AMATEURS, I/we know that most of you AMATEURS who hang out in this group secretly use our freebander channels. I/we invite you to turn in your ham license and return to YOUR ROOTS! You know you want want to return full time, but you would be looked down on by your fellow AMATEURS if you did.

Come on up to 27.505 USB and free yourselves, church is in session.

I picked up this set at a tag sale . The radio works , when you transmit your voice is garbled I tried a different mic from a cb that works and i get the same thing . any ideas. also can anyone recommend where i can find some books on how to trouble shoot radios,and fix them i like the hobby. when you key up the mic it definitely transmits but not understandable. also I have a realistic model #21-1537 that does nothing but hum when you turn on the power. ? any ideas on that .

thanks all

4688. "Noise" from DC Power

Newsgroup: rec.radio.cb
Date: 2001-07-16 00:59:21 UTC
From: Darryl <darryl@nowhere.com>
Message-ID: <j2r47.262944$Z2.3182468@nnrp1.uunet.ca>
Source record: 88809

I have a Cobra 38 WXST handheld CB. When I use the DC adapter in my car, a significant amount of interference is created when I turn on the ignition, necessitating a high squelch setting. If the ignition is in the ACC position, the radio is fine, but as soon as I go to the ON position I get all of the noise. If I am on batteries, there are no interference problems. I therefore assume that the DC power supply is the source of the problem, when a fuel pump or something comes on.

Is there anything I can do/purchase that will "clean up" the DC power?

Thanks

Darryl

And for the type of operation some Hams are interested in they don't need CW. In my case it's V/UHF. When those operations are above 30MHz the privileges every Ham from Tech to Extra are exactly the same without a CW requirement. And as you say I "faced reality and done what needed to be done" and that didn't include CW. But you're still looking for a reason to cop an attitude.

Actually Aaron sounds like one of those Gun-Control
Wackos that wants to "throw laws" at everybody, but has no
consideration for the possible repercussions. So he winds
up doing little more than chasing a problem through another
loophole, and royally screws up all the regular folks.

They can't for one minute accept the idea that people who
make very wrong decisions are the problem, not every object
on Earth that could ever be misused in someone's wildest
nightmare.

Here's the simple logic of these people:

A) Freaks with nothing to lose lead cops on wild car chases.
B) Outlaw all the cars.

What next? Swimming pools, kitchen utensils, coat hangers
belts, socks, shoes, gas and electricity, all hand tools...
The list is endless.

Heard this on Jurassic Park:

A) God creates dinosaurs and man.
B) Dinosaurs eat man so God kills dinosaurs.
C) Man kills God and brings back dinosaurs.
D) Dinosaurs eat man... and Woman inherits the earth.

Go figure.

Hello Dick: Yes I didn't get all the pictures to down load either.

I have been to a few of the Keydowns, and was totally impressed at all the different engineering approaches and methods and means that where used. A lot of home made stuff. I had a ball, and got to meet some pretty neat people.

One of the guys there had 3 each of large 200 amp Leech Nevile Alternators, the mounting was flawless, But the only thing was that the gentlemen used O-4 gauge wire for the positive lead, but relied on the vehicles chassie for the ground return path. I suggested that the gentleman install a 0-4 gauge ground wire also as the ground return path. Many there tried to convince the gentleman about I squared R loss ect. I suggested that the current needed a open and clear freeway to and from Grandma's house. That did it, someone had the 0-4 gauge wire and others had Hydraulic Lug Crimpers, and Wire Lugs. In only a few minutes, everything was humming.

Then I was looking for a lead hat, with a conductive chin strap.

I can only speak for myself, so here it goes.

>I have to really question the real reasons for all of the AMATEURS who think
>they must try to get 27Mc users to repent!

Repent?...I don't think so. I was just offering a way to gain more bands, at more power, with less hassle, all while still supporting your favorite freeband radio manufacturer and telling the AKCers where they can stick their Part 95 lectures. (Not to mention the curmudgeons.)

>Face it AMATEURS, your not wanted!

Fair enough.

>Have your bands become so BORING that you must hang out here on a CB group?

I started out and am still on CB. As for the boring part, get your favorite fifty 11 meter friends to spend the $6.00 and meet you on 6 meters and I don't see where "boring" comes in.

>We like the freedom that we have on 27Mc! We like having powerful radios
>that
>we can buy at truck-stops or HRO. Who the hell needs a license!?!?!?!
>
Freedom to do what? There's nothing you can do on 11 meters that can't on 2 or 6 meters. That statement cannot, however, be reversed. I need the license to gain over 8MHz of band space as compared to approx. .6MHz in the freeband.

>I/we know that most
>of you AMATEURS who hang out in this group secretly use our freebander
>channels.

Change the word "most" to many and you'll get no argument from me.

>I/we invite you to turn in your ham license and return to YOUR ROOTS!

Nope, the Teche license was too easy to get and likewise, too easy to lose.

>You know
>you want want to return full time, but you would be looked down on by your
>fellow AMATEURS if you did.

Couldn't give a rodents rear end what anybody, other than those I respect, thinks about me...whether they be an 11 meter operator or ARO.

Sunday, July 15

ESCAPE FROM LA - Kurt Russell returns as scofflaw Snake Plissken ("Escape From New York") for this '90s sci fi epic. The critics universally panned this opus, and while, granted, the special effects are cheesy as hell, I find the movie to be a charming allegory about the 40 channels of the Citizens Band. Think about it: pen up all the hardcore criminals into one place with no supervision where they screw over each other. (Russell: "I'm sick of your rules.") Run time: 2 hours with plentiful commercial breaks. Beginning at 9PM ET/PT on ABC!

There are those on this group far better at the practicalities than I am but I can give you a bit of the theory and reality of the problem.

There is a school of thought that defines audio or modulation as the difference between dead silent carrier power and the peak reading of their output meter. This is basic horseshit. The nature of AM (and mixing processes in general) is that you cannot get more than two watts of audio in the form of two 1 watt sidebands on a four-watt 'carrier' which does not actually carry anything. You can get a lot of crap but that is not the problem at hand.

So to get 'talk power' the idea is to raise the average-to-peak ratio of the voice waveform. On a normal voice, this is on the order of 20-25 percent without some form of intervention. There are three classic approaches to this problem that are in reality a bit hard to separate. The first is compression, a technique that goes back to the days of rock jocks and the Gates Sta-level; it let the Madman behind the Mike bob and weave, cuing up his hot wax, without the listener having a clue. Low level sounds are amplified more than higher level ones. CB transmitters have had this or something like it since the 70s at least. The second is clipping which just limits peaks and if properly done to eliminate audio harmonics works good -- not a biggie in CB circles. The third is called 'limiting' which is a technique from Armstrong's FM system of the 30's in which an amp behaves normally but is set to output a predetermined level almost regardless of input. This is why FM is quiet. This limiter can be hard or soft as it approaches its terminal value; a rock-hard limiter is called a clipper.

So the radio already has in it, more than likely a limiter, a device for the purpose. The idea is to set your audio levels to bump up against the limiter and raise the average level without introducing too much distortion. It also prevents trying to drive the output below zero on voice peaks, called overmodulation or stupidity interchangeably. This works well in even a simple circuit; guys seeking to clip the limiter are morons. This is the current method used in the broadcast biz and with proper treatment they are

getting ratios in the 70s at tremendous loss of dynamic range.

Now the manufacturers know that voices vary so there is a form of compression in most of them in which the audio level is adjusted automatically early in the mike amplifier to a level which is compatible with the limiter, theme and variation on the Big Brown Round Mound of Sound rock jock.

Having taken you thru the woods let's get back to your question: does a power mike or echo help? As you can see, probably not if the rig is decent in the first place. It is kind of silly to amplify the mike only to have it reversed by the automatic gain control in the mike preamp -- and that reversal is not done without some distortion. It is likely that there are better mikes available than the stock one but amplifying it is not the reason why. I won't talk about echo except to note that it is fine if one likes to sound like W-I-N-O Wonderful Wino.

There is one good reason to amplify (although not a hell of a lot) audio. That is to fart and fiddle with the frequency curve. There is no good reason to allow audio above about 2.5-3 kHz to pass at all. It gives bandwidth and presence but does zilch for communication. Similarly, frequencies below about 300 Hz take power to transfer but also contribute little, less, or nothing to the communication process. These are routinely destroyed in communications equipment but overdrive tends to cause both to reappear for a number of reasons. If you hear a signal that is bassy or tweety, odds are it has been attacked by an imbecile. Within that 300-2700 range there is nothing in the book that requires that they be attacked equally.

Have you ever noticed that the female voice stomps the living shit out of a male one and that you can hear kids for blocks? The human ear and tinny receivers tend to favor audio frequencies in the 1200-1500 range and a good communications mike will have some favoritism in this range. Fidelity is not the object of the exercise. One of the all-time best combos in this regard is the Sillytronics and the Shure 554; I had the Swan 300 and still had to put a cap in the mike line to overcome a resonant bass-baritone voice (I cause windows to rattle). So what a mike system should do is to give you some control over response, something more like an equalizer than an amplifier.

Incidentally, some new rigs are going to mikes powered from the rig itself so a truck-stop power mike may not work at all.

Use your own judgement as I know you will but any improvement you make to a decent stock rig is going to be with a quality mike far more than a loud one.

Dick NBK

in short words all a power mic is going to do is enable you to talk normally into the mic at a farther distance away from it... but if you talk too loud into a power mic it will cause you to distort you modulation... if you are using the mic in your car/truck then all a power mic will do is amplify the background/road noise.. then you are better off staying with a stock mic as far as the Echo Mic's i don't think they are worth the money to be honest... i mean you can only listen to a person that sounds like a parrot for so long...

Not to Mention the poor transmitter poor 3rd order IMD. When analysed on the peak storage spectrum analyser i have seen samples that average -18 below pep. Real CB stuff here, not something you want to feed into linear amplifier.

Wouldst that his site worked. You can go take a major dump, dig a hole, and rebuild the outhouse and still have lots of time. And at that 7 pix do not download.

Are all the red stuff his DC lines, the Freon to cool it, or the automatic fire extinguishers???

Yes...a power mic will definately increase the audio output(loudness) of your
station. I personally HATE echo mics (sounds stupid on SSB), and I would
HIGHLY recommend the Astatic D104-M6B mobile mic, or the Sadelta line of base
mics. Either one is a top shelf microphone, and they both have GREAT audio.
After all, you WANT great audio...not silly echo.

Actually I have a major urge to attend one for shits and giggles. At my
age, the lead jockstrap is not of major import but my hair is starting to
grey so getting a permanant wave the hard way is absolutely out. Didn't
they call that a Marcel once?

Now and again I see a Suburban with a major loading coil on it. Have to see
about an invite. We survived George Baris custom jobs and King Kong hemis
in Falcons, how could this possibly compete :-)

Dick in the humid Mid-Continent.

: gain over 8MHz of band space as compared to approx. .6MHz in the freeband.

Sure you can. DX is much more frequently available on 11 meters, even more
so than 10 meters.

But, if you want to be able to legally talk DX every day of the year, you
need an Amateur license.

If you radio has poor modulation, then careful use of a power mike can improve your signal.

Unfortunately, the usual usage is to crank it wide open (to get that "swing" that so many CBers think is necessary) - the result being a lot of splatter all over the band.

An echo mike can also slightly improve how some people sound, especially those that have a "thin" voice. Again, the most common use is to crank it open - so the person sounds like they are talking from the bottom of a well.

Most people are better off without either, if they are interested in communication, and not just using some cute toy that makes their very distorted/muddy signal stand out (even if no one can understand them).

From what I hear, the retards are not even heard yet on the HAM bands.
I've not heard a new user yet except for one guy and he was a kind person
and was respectful. I guess I'm a retard because just 5 wpm code is kicking my
ass and as usual, because of the code I might never become a HAM other than a measly
tech which no one cares about. The General class license is simple as I'm a electronic
engineer,
but the code, even 5wpm my brain was not designed for to interpret and I have a horrible
case of ADD when it comes to a series of beeps spread out over six tapes (BORING!).
I'm not giving up though. Someday, if God doesn't kill me first, I'll be a HAM. Someday.
So if I'm a retard, get ready as I'm coming on as I'm busting my ass and earning my way.
Back in the old days when most hams got their license it was easy. The content wasn't but
the learning was as people had the discipline to just sit down and study, study, study
until
the learned it. Now society in general doesn't have the disclipline. I know I don't but I
bust
my butt to still study and I will pass the tests someday. Sorry if you think we are
retarded.

Nice markup for a radio you can buy in a truckstop for $125, and that
all the conversions and upgrades cost less than $15 in parts and take
less than an hour to do...

I just haven't seen a post worth replying to, just the usual trolls,
flames, bad technical advice, and overpriced garbage for sale. Heck,
even twistie is getting to boring to reply to anymore, just the same
old repetitive whinings and circular arguments. But I certainly
couldn't pass up this opportunity to show everyone how much of an
obsessive, delusional twit -you- have become!

> :>We like the freedom that we have on 27Mc! We like having powerful radios
> :>that
> :>we can buy at truck-stops or HRO. Who the hell needs a license!?!?!?!

Nobody NEEDS a license. I could operate on the ham freqs without one.
But I do have a license, because I like operating legally, without
fear from the "big bad FCC". I don't like them, but I don't want them
investigating me either.

> :>Face it AMATEURS, your not wanted!

Yeah, well YOU'RE not wanted on 10 meters without a license, either.

> :>I/we know that most of you AMATEURS who hang out in this group secretly use our
freebander channels.

"Your" channels? When did the FCC give you that? And you say hams are
prudes?

> :>I/we invite you to turn in your ham license and return to YOUR ROOTS!

Can't disagree with the last part. I did start out on CB...but wanted
more. There's nothing wrong with CB, nor is there something wrong with
ham radio. Each has their own strengths/weaknesses. As for giving up
my license, no thanks. I'll be taking the Element 1 5wpm code test
soon..worked hard for that.

I see this all the time on this NG, as well as some of the
rec.radio.amateur NG's. There are NOTHING, and I repeat NOTHING
different about 11 meters than a ham band. Hell, it used to be one!

So, the CB'ers say that "hams are elitist"...some of them are.
Hams say CB'ers aren't technically competent...some of them are.

Even as a ham, I still operate on CB, AM and SSB. Why? Because I like
to use radio, and it doesn't matter to me what part of the spectrum
I'm in. If the FCC allows it, I'll use it. By saying that "ham
operators should pack up and get the hell out of CB" is just as
elitist and bigoted as a lot of CB'ers portray hams to be.

So, my point is that we've both got flaws, CB'ers have no reason to
insult hams, and hams have no reason to be elitist.

73s,

Jim

That is no reason. The changing impedance has not changed the SWR.
Go read the article I cited:
http://www.tmworld.com/articles/2001/07_smith.htm

> If the load is matched and "balanced" properly, and the impedance at the

That is not a requirement for the SWR to remain constant.

No it doesn't. I explained how an SWR meter works. It is not
sensitive to the location along the transmission line.

If you SWR reading has changed, it must be because some other
parameter has changed (e.g. coax loss). It is that simple.
You've never been able to give any good explanation or reference
that suggests otherwise.

> what my attitude is?

Why do you cop an attitude at all with Hams who have a Tech license? They followed all the rules and "did what was required" to get the level of license needed to suit their style of operating, and that was by your definition too. I read all the discussions about why Ham Radio's appeal seems to be in a decline on the policy news group. As some have pointed out repeatedly there seems to be far too much "elitism" among Hams of different license classes, with your crummy attitude toward Techs being an example.

I do find your comments and attitude hypocritical. On one hand you stated here in this news group a while ago that you would not administer as a VE for Tech, then on the flip side in a reply to Bert Craig you advocate CBers getting a Tech License.

Richard McCollum wrote:

Twisite Ill answer for him,

"Picking and choosing what to answer again and playing armchair lawyer at the same time? Hmm...ok. I would like to know how you know how to answer adamantly each time for Artificial Aaron (not to be confused with artificial Rhonda), Leland, Doug and Sparky."

lets assume

"(sigh)...here we go again with false analogies that do not even apply. Nice try, seriously, but that argument has been ripped to shreds over and over. One can not compare a tangible with an intangible."

2 things say you are walking on someone private property where it is clearly posted NO Trespassing. You say all hell I don't care I am just cutting across this guys property, no one is going to see me he aint around even to protect his property. So you scamper across the property not harming a thing you just cut across and be on your way, well 2 days after 3 other people said the same thing Hell no one is around well just take our quads across this field, so they start ripping up the property while crossing the other side, About a week later there are a few more guys parked there Bullshitting with each other drinking a few beers, while their friends rip up the property that you so cautiously walked across. Take that as you personally may not be "hurting' anyone, but not paying taxes never "hurt "

"So not only have you tried a false analogy, you are attempting a poor dichotomy in order to illustrate your argument."

anyone either, jaywalking doesn't hurt anyone.

"...and another."

My antenna being up 100' foot compared to the town ordinance that says 35' hell I am not hurting anyone But they are illegal Bottom Line, "..and another. You changed the question and answered with a reply that has nothing to do with what I asked. Sure it's illegal, I never denied that."

I am sure many say aww hell I smoke pot why should I care about talking on the Freeband thats small potatoes. It maybe but it is again still illegal.

"And again, I never said it wasn't illegal. I said it doesn't hurt anyone, just like you pulling some bong on your living room couch, since you used the marijuana comparison. If you are being honest, you must admit that very few people even once in their lives experience a situation where their choices of cb communications are reduced to comparing an illegal act that affects others.
Now, while you are busy throwing around pithy maxims, consider this one: When your only tool is a hammer, you tend to see every problem as a nail....In extremee cases, this may be appropriate. In the vast majority, I believe, either the analysis of the problem or the choice of the solution, or both, is wrong, and you perpetuate it along with the same few you blindly rush to defend."

A power mic only increase your modulation, in no way does it increase you rf power. It will give you a little swang, but if you want to get out further, you need to get that thang,

> issue like the black plague."

The only "Black Plague" here is you Twisted. You're just here to see how much crap you can stir up when you can't go fishing because the diny has a leak that a wad of chewing gum can't fix. I just find it funny how Doug ripped a page out of the illegal CBer's handbook, turned it around, applied it here to this news group, and you never figured it out. You were too busy trying to play the game instead of trying to figure out the rules.

All the bellyaching done by the illegal CBers on this news group did nothing to stop Doug's posting. That's the same thing as the illegal CBer running amplifiers and operating in the so-called "Freeband". When the issue of FCC enforcement is mentioned the illegal CBer says nothing is going to happen because the FCC doesn't care. Guess what? Doug's ISP didn't care what he did either.

Now of course the Freebanders will claim that their operations "don't hurt anybody", well as far as I can see nobody on this news group died as a direct result from one of Doug's posts, so he didn't hurt anybody either. You can argue all you want about that, but it's his point of view that counts since he was the one making the posts. That's no different than the illegal CBer's comments when asked about their operations. In their view nobody is getting hurt so any other views just don't matter.

And now we have the issue of the so-called forged posts. Hummm.... Well there were several posts discussing how my call sign was heard on the so-called freeband being used by several different CBers. So we have to face it there must be more CBers out there who use valid Ham callsigns, that don't belong to them, to bootleg on various H.F. bands, including the Ham bands. That's basically no different than forging somebody's screen name in a Usenet post with the deliberate intention to fool people.

The really interesting part comes when all of the people on this news group complained about Doug's posts, filed complaints with his ISP, and some posting the "terms of service" from his ISP. That's no different than anyone else posting sections from Part 95. The complaints to his ISP didn't seem to stop his posting or other activities did it? No different than the smug comments posted from various illegal CBers on this news group concerning Part 95 violations, and how they were not going to stop doing their "thing".

So all in all Doug reduced this group to the level where some were waving the "rules" around, for ISP terms of service, and saying how the posts were

hurting the character of the news group etc. It seems to me the point of view of whether or not breaking the rules "hurts anybody" depends on which side you're on. In Doug's case the illegal CBers were on the receiving end, and from all the whining done by them it sure seems they didn't like it much. It was interesting seeing how Doug turned several illegal CBers in to whining rule-waving hypocrites, ISP terms of service on one hand and Part 95 rule bashers on the other.

Don't give up on the 5wpm. You can do it. It just takes time and practice.
I would suggest listening in on some on-the-air QSOs, if you have a receiver to do so. I'm sure you have a band plan so I wont list the freqs. 80 and 40 meters in the novice sub-band is a good spot.
The only trouble (which may be in your benefit) is that code tapes and tests are "perfect" CW. No static, no mistakes, no QRM. You'll never hear CW that good on the air.
Buy, borrow, steal or copy a different set of tapes. That seemed to help me. After a while one seems to memorize the tape they're using. Another idea is to find a study-buddy (if you both have tech licenses) to do some 2 meter modulated cw practice.
I had a lot of trouble with that 5 word test, too. Once you get it out of the way and get on the air making real CW contacts, your code speed will jump up fast.

In the old days, code tests were conducted by FCC officials. Those guys didn't care if you passed or not. No matter how much of a nice guy you were, they didn't like you. The headphones were like wearing a couple of hockey pucks attached to your head with a C-clamp.
Today, tests are administered by volunteer hams who *want* to be there and *want* to see you do well.

BTW, I really wouldn't expect a "retard" to successfully pass a tech exam.

Leland great Post, You hit it right on the head, They don't like the same rules being applied to them they cry and stomp there feet but do the same thing on the CB band as is being doen here. Complaining to an ISP is very similiar to keying up an amp and stomping a electronic mudhole on a duck. It is all done in a effort to silence someone.

leland Great post.

Yes I have, and maybe

CHANNEL FAULT :
According to my data the Robyn 540D has UPD858 PLL. This fault would suggest a disconnected program pin - possibly pin17. This could be a broken track, dry joint, or broken wire. It is also possible that the selector or PLL are at fault - but I like to be optimistic.

RX LOW SIG :
Does the signal sound weak ? If the signals sound strong, then look for the meter adjustment, or try tuning the IF stages. If the signal sounds weak, then try tuning the RX RF stages - if no joy, suspect front end transistor. The distorted RX may suggest the RX needs tuning.

Sorry if this reply is a bit late, but my ISP had problems with their server. Then when they got it up and running, some brainbox at the ISP deleted some of the newsgroups from their system - which included this and all my other usual groups.

> conversion would be apretiated.
>

Is this the PC-999 board grant ? (there were several versions)

The MB8719 does not allow as many channels as the MC145106 used in the other models (about 125 channels max). The Grant (PC-999 version) only uses 80 of these with 2 xtals, and one higher band is possible by progamming the adder ICs to 93 + n
By changing the 15.45 MHz xtal to15.9MHz, a total of 5 bands is possible.
To get an extra low band, the 15MHz xtal could be changed to 14.55MHz.

When you say the PLL is locked, do you mean the radio has been converted up there, or the PLL is actually stuck on one frequency ?

If you are stuck, I could draw some diagrams and e-mail them to you, but please confirm if you have this version of Grant.

Bert is selling his thing and if you re-read it I am basically advocating setting no little goals and aiming a bit higher. Element 3 is generally like studying for your drivers license and in the same range of difficulty. I am also advocating treating it as a routine part of reality that perhaps a million people have passed -- Element 3 except for the addition of RF Safety has not basically changed in 50 years that I know of. Getting your manhood involved does nothing; you cooled it for the DL test and you cool it for this, BFD. One more day at the slaughter house. It is a license, not the Holy Grail.

While I think that the Tech ticket has its legitimate place, selling it as a gateway or entry-level license is fraudulent so long as 25.5 of the Geneva Treaty is in place. Bert is not doing that so he escaped the lance. He is selling it basically as a way to do a lot of the things people are in CB to do and in that respect he is 100% correct. It is one of several reasons the CT was invented.

Now to return to your issue, I am not into putting down Techs as a group. What I am into is pissing on the shoes of 'Lifer Techs' who have had the ticket forever but go further and become haunters of Dayton, resident experts on 160 meter propagation, the local Judge Bean on all regulations, and in general stray from the reservation. All over a lousy 5wpm code test. I am damned tired of Morris Kode, the way things 'should' be, and the rest of the crap that goes with evading reality. Reality is section 25.5 which, BTW, does not define a CT as an Amateur.

It appears in this chair at least is that the root of the issue is that I keep inviting you to do one of two things: pass the code test and become an 'Amateur' or go do what your ticket allows you to do. Buzzing around like a big fly don't make it. Getting a Tech is no sin, keeping it might not be, but waving it around like it meant something is not only sinful but irritating.

I had the privilege of taking my 13wpm test in a big hall along with
others back in the "one-minute of solid copy of extremely incoherent
text" days. QRW/223-. The audio was from a record player or something
and was a high-pitch warbly tone that echoed off the walls. That,
combined with people shuffling around dropping pencils and groaning was
an experience where I would have been elated for any sort of headphones.
To this day I can't copy well via a speaker. I guess its a lack of
concentration? Maybe thats a clue for some folks who may be having
problems.

A buddy of mine has a big Civil Devense radio I though was pretty cool - anybody know anything about these?

He says when you key the mike a big generator kicks up and creates DC power (like a car altenator) and warms up several large tubes.....I don't know about an antenna for it, but it seems to have enough bleed over you wouldn't need one. He said the only time he keyed it up it bled over the radio, tv, computer speakers, phone, and anything else that would make noise.....

Its comprised of two large black boxes with six gauge wire connecting the two, the generator box, and a box for the mike.... on the front it has a big civil defense sticker....

Any info would be greatly appreciated....

That of course all depends on what one wises to do with it. If the promise
is H.F. access you have a valid point, otherwise it has may other very good
uses other than calling the wife at home as you so often like to point out.

> Bert is not doing that so he escaped the lance. He is

It does not even specify a code speed , nor do I see the words "General",
"Advance", nor "Extra" mentioned anywhere so I could say they are not
amateurs either. I can play word games here too.

> It appears in this chair at least is that the root of the issue is that I
> keep inviting you to do one of two things: pass the code test and become
an
> 'Amateur' or go do what your ticket allows you to do.

"Amateur" is somebody who holds a valid FCC license under Part 97. If you
find that unacceptable then I suggest you file a RM with the FCC and get the
wording changed and quit whining about it. Personally Richard I can think of
many other skills that in the long run are much more valuable than CW that
defines an "Amateur", such as volunteer work, helping youngsters to get in
to the hobby, expanding one's own knowledge in various fields of
communication that interest THEM, etc. As a matter of fact there was a long
editorial in a past issue of QST along exactly those lines. I suggest you go
a read it. As far as I'm concerned CW is just another tiny pebble in the
rock pile. You need to take a few steps back to get a better view of the
overall picture.

> Buzzing around like a
> big fly don't make it. Getting a Tech is no sin, keeping it might not be,
> but waving it around like it meant something is not only sinful but
> irritating.

The only reason you would be irritated Richard is due to your own
expectations. There is a nice saying I have read in several places you
should medatate upon - "An expectation is a premedatated resentment". You
expect people to do one thing, and then you resent them when they don't,
which is becaused you assumed you can control others by simply thinking.
That's called "mind control". Let we know if and when you ever get it to
work, nobody else ever has.

I encourage all hams to learn and use CW. But there are some people
who cannot learn Morse code for whatever reason. My 91 year old aunt
would be a good example. She often doesn't even recognize me. How
could she possibly recognize Morse code characters?

I've realized as a shortwave fanatic that much of shortwave consists of CW and data. It's like a whole other world out there and I'm getting more interested in non-voice.

I LOVE the euphemisms you folks think up. "rent" implies you are
paying for use of the property. Sorry to clue you, Twist, but what you
guys do on "freeband" is *steal*.

Regardless of differences I may have with Dick McCollum, I must say
this has got to be one of the all-time great posts and shold be
included in a CB FAQ. Informative, concise and helpful. Bravo.

No, Doug would have added a gay angle and utilized outrageous
profanity.

Why are you so concerned that Doug and I might be the same person? I
always thought you were (albeit a dedicated scofflaw) more in touch
with reality than some of the nuttier conspiracists in the NG.

Leland C.Scott, KC8LDO furiously pounded away at the keyboard and managed: Why do you cop an attitude at all with Hams who have a Tech license? They followed all the rules and "did what was required"

"And even some that wasn't required, like asking for frequency mods then wanting to crucify anyone else that asks for the same information. Hypocrite."

to get the level of license needed to suit their style of operating, and that was by your definition too. I read all the discussions about why Ham Radio's appeal seems to be in a decline on the policy news group. As some have pointed out repeatedly there seems to be far too much "elitism" among Hams of different license classes, with your crummy attitude toward Techs being an example.

"And your crummy attitude toward cbers being another.. What was it you said, "Cbers have nothing important to say", or something to that affect. Hypocrite."

I do find your comments and attitude hypocritical.

"This is getting hysterically funny."

On one hand you stated here in this news group a while ago that you would not administer as a VE for Tech, then on the flip side in a reply to Bert Craig you advocate CBers getting a Tech License.

"And on one hand, you have blasted many folks repeatedly for not following the law when you are no better, and on the flip side, you have made disparaging comments concerning cbers as a whole, then attempt to take another to task for what you perceive is the same infraction against hams. Leland, you are the epitome of what plagues ham radio."

Richard McCollum wrote:
2. The truth of Bert's 35 easy questions can be checked at http://www.qrz.com. Some pretty good sample exams are available. It would not surprise me if most of the groupies could pass the damn thing right out of the box. 25 of 35 I believe. While you are at it, try Element 3, the General exam. You probably won't pass but you will not see anything really technical, just a lot of rules, regs, rf safety, band limits, etc. Buy the book and don't make a Federal case out of it.

You may not be making "a Federal case out of it", but you do make it a personal one.

Saw the ad for this on ebay....
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1255409637

CHANNEL MASTER v1.0.0
By: BIGMOUTH CB Radio Accessories
Connect Your CB To Your Computer!

Expand Your Channels (Up to 5 bands of 40 channels)
Know What Channel And Frequency You're Really On
Change Channels With A Click Of Your Mouse
Plugs Into Your Printer Port
This software will work only on 40 Channel CB Radios using the PLL 02A
frequency synthesizer chip (or equivalent).

This software will allow you to interface your CB radio with your computer
to expand the channels on your CB without all of the switches and guessing
what frequency you are really on. This software has a capability of five
bands of 40 channels including the channel "skips" between certain channels.
However, the actual number of channels you will get depends on the
capability of your radio. In many cases you will not be able to use all
channels without making adjustments to your radio. In many cases you might
only get 40 low channels, 40 regular channels and 40 high channels including
the channel "skips", but that's still over 120 channels. Once the interface
cable is installed onto your CB, the radio will no longer function without
the computer and this software. If you wish to use your radio without the
use of your computer and this software, simply remove the interface cable
and reverse the installation process.

IMPORTANT! Please Read!

THIS KIT IS NOT RECOMMENDED FOR BEGINNERS, REQUIRES PRECISION SOLDERING ON
YOUR CB AND ON THE INTERFACE CABLE.

Some assembly required. The interface cable does not come fully assembled.
Interface cable consists of (1) pre-wired parallel port plug, (2) IC chips,
(1) small circuit board, and (1) ribbon cable. All of which is included with
the kit. Simply solder the cable from the plug and the ribbon cable to the
provided circuit board, plug in the IC chips, and the interface cable is
assembled! All required parts are included in the kit, there is nothing more
to buy.

Kit Includes:

Channel Master Software (3 disk set)
Pre-wired parallel port (printer port) plug
Circuit board with 2 ea. IC sockets
Ribbon cable (11 conductor)

2 ea. IC chips
1 pc. heat shrink tubing
Cable assembly and installation instructions
System Requirements:
Windows 95/98
(1) Parallel Port (Printer port)
3 1/2" Floppy Disk Drive
NOTE: This Software Will Not Work With Windows NT

Buyer pays actual shipping charges of $3.50 for USPS Priority Shipping.
Payments can be check, money order, electronic check or credit card.

But, it did stop the flooding. That can't be denied.

"The really interesting part comes when all of the people on this news group complained about Doug's posts, filed complaints with his ISP, and some posting the "terms of service" from his ISP. That's no different than anyone else posting sections from Part 95. The complaints to his ISP didn't seem to stop his posting or other activities did it? No different than the smug comments posted from various illegal CBers on this news group concerning Part 95 violations, and how they were not going to stop doing their "thing"."

Hi Leland,

>Try 11m=CB. ;-) All of that under Part 95 too.

I had that one covered in item four of my original post. "You certainly don't have to abandon 11 meters. I'd stay active on
the legal 40."

The comparison was more in terms of usage rather than wavelength. I personally think 2 meters makes a better CB service than 11 meters. It fulfills the original purpose of the CB service pretty well. I can hop on 2 meter SSB and talk to my buddy (...pun intended?...take it as you will.) in suburban MD from LI, NY without too much difficulty. Understand, of course, that an 15 element commercial yagi or quad is a viable and affordable option on 2 meters. Try that on 10 or 11 meters and you'll go broke and/or nuts.

On a more social note, how've you been, Leland? Well, I hope. I'm drooling over that $700+/- Ten-Tec. Take it easy.

> I don't see the problem with that so long as they know what they are
talking
> about.

****
****
Perhaps, but can you seriously object to a suspicion at least that all of
the
activity is dedicated toward evading a code test. An OT with that suspicion
has a bit of an ethical problem: aiding and abeting -- enabling if you like
psychobabble -- what is in the long run of things not a bright idea and one
ultimately damaging to the individual. Kind of like being nice to a DUI on
a much smaller scale
****
******
>
> > All over a lousy 5wpm code test.

****
****
Section 25.5 defines an Amateur for purposes of the Geneva Treaty. It
defines him as knowing Morse code. This is what all the hooferah is about
****
****
>
> > It appears in this chair at least is that the root of the issue is that

****
But it is not Amateur Radio in the meaning of the treaty. All well and
admirable to the extent it is not a giant activity trap to convince someone,
more than likely oneself, that it is not necessary to take a code test.
When or if 25.5 goes away, all things will be reevaluated.
****

Some of us even remember 2400 baud modems and there was no such thing as a browser like you know it now. Everything was straight FTP and telnet. Then that damned college developed Mosaic and all the weenies were able to get online! LOL

4800. Needed: Tube Specs for 8908

Newsgroup: rec.radio.cb
Date: 2001-07-17 00:37:09 UTC
From: n7kn <n7kn@hotmail.com>
Message-ID: <kNL47.5828$b3.1853607@feed.centurytel.net>
Source record: 88939

I pulled this square peg (octal based, more accurately) out of a Hy Gain 644
"Footwarmer". It was marked "HyGain 760002". I was told that it's an 8908.
Both tubes have suffered a "smoke leak" (vacuum leak) and need replacing.
None of my manuals give the specs for this tube. I would like to find a
less expensive substitute.
Does anyone have it in any of their books?

Hello Richard: Oh brother.....

Yodelling you betcha GI. I am hearing impaired to a point, and sometimes I don't communicate all that well due to my poor hearing. I was in to many wars, or was it war stories at the bar with loud rock n roll......

Anyway with skip or long distance stations, I prefer to have them transmit a slight echo, its way more easier to understand when the received signal is neck and neck with the noise. As a matter of fact I have made contact with a few QRP SSB stations on 6 meters that where using a slight echo, and to me it enhanced the understandably of there speech.

Ok back to work here on the Yodelling.

In our CB Club of the 1960's and 1970's located in Tujunga California (over looking the San Fernando Valley) we had solid communications with the South Bay areas and beyond at times.

"Gettey up and GO" showed up at our house at times for a pre CB Break beer or two. He looked like Johny Cash, but wore dark green instead of all black. And had his hair combed back, kind of like Elvis. He had a deep voice, and was about 6 foot 4 inches. I fixed a lot of linears for him.

"Gettey up n GO" was a Country Western singer in a Honkey Tonk Bar type band. He was recently divorced with the new to be X wife's boy friend paying dearly for the divorce. With the ol lady out of the way, "Gettey up n GO" was free to play as he wanted.

There where many CB Breaks all over the southland that "Gettey up n GO" played, with his band. He use to Yodel and sing, and was pretty darn good. He even played in Las Vegas a few times.

Well as time, money, and way too much beer one night would have it, "Gettey up n GO" got his beak way too deep into the Goon Juice, and decided to saranate the local and distance CB Crowd. Well with one of the old Johnson Viking Rangers II, and a 2 KW linear amplifier feeding stacked 4 element Moonrakers, (a pretty darn good station I might add) we (southern california) on channel 15 AM heard the "Gettey up and GO" Sing, Yodel, and Hum the night away. He would take beer breaks, to allow the equipment to cool down, while he was beering up!

He even had background female singers, singing in the background! The electric gartar was also connected to the mic input of the old Johnson Viking Ranger II. He sang to almost a "TEE" Marty Robins "EL Paso" I wish I had a tape recording of that night.

My Dad would sing out "Yee Haw" and take a swallow of Whiskey.

And at times "Gettey up and GO" used a little reverb/echo. CB Radio at
its finest!

Jay in the Great Mojave Desert, ...just down the road ah ways from the
fillin station.

Group: rec.radio.cb Date: Mon, Jul 16, 2001, 1:25pm From:
no-spam@junk-mail.net (Leland C. Scott)
"Twistedhed" <twistedhed@webtv.net> wrote in message
news:12887-3B4F6902-342@storefull-124.iap.bryant.webtv.net...
practiced concerning Leland's inquiries for assistance in illegal
matters, among other things. They both have avoided that issue like the
black plague."

The only "Black Plague" here is you Twisted.

"Well, you posted a quote of mine showing how you avoid the issue like
the black plague, instead of just being a man and taking it on the chin
and saying, "Yea, I was busting the same law that I bitch about others
not following."

You're just here to see how much crap you can stir up when you can't go
fishing because the diny has a leak that a wad of chewing gum can't fix.

"Well now junior, just look back before Dogie and you started your games
and see how much I was trying to "stir up." The trouble follows you."

I just find it funny how Doug

"Of course you would. You and Dogie are on the same level, it is
expected of you."

ripped a page out of the illegal CBer's handbook, turned it around,
applied it here to this news group, and you never figured it out.
You were too busy trying to play the game instead of trying to figure
out the rules.

"I play by my own rules, Leland, which is why I can tweak you and raise
your blood pressure with out even trying. The fact that I care nothing
about your belly achin' is too much for you to handle."

All the bellyaching done by the illegal CBers on this news group did
nothing to stop Doug's posting.

"Really? What happened to the flood posts? The porn? Wrong again,
Leland."

That's the same thing as the illegal CBer running amplifiers and
operating in the so-called "Freeband".

"Aw, jeez! More broken analogies that are not applicable."

When the issue of FCC enforcement is mentioned the illegal CBer says
nothing is going to happen because the FCC doesn't care. Guess what?

Doug's ISP didn't care what he did either.

"He's gone, ain't he Leland?"

Now of course the Freebanders will claim that their operations "don't hurt anybody", well as far as I can see nobody on this news group died as a direct result from one of Doug's posts, so he didn't hurt anybody either. You can argue all you want about that, but it's his point of view that counts since he was the one making the posts. That's no different than the illegal CBer's comments when asked about their operations. In their view nobody is getting hurt so any other views just don't matter.
And now we have the issue of the so-called forged posts. Hummm.... Well there were several posts discussing how my call sign was heard on the so-called freeband being used by several different CBers.

"Must be 'cause you are so well thought of."

So we have to face it there must be more CBers out there who use valid Ham callsigns,

"You're getting warmer...maybe."

that don't belong to them,
to bootleg on various H.F. bands, including the Ham bands.

"Now how in the world would you infer that from freebanding? Pulled that right out of your frustrated accusations, you did."

That's basically no different than forging somebody's screen name in a Usenet post with the deliberate intention to fool people.

"Like when one would flub up so bad with their anonyous posts not finished? Like calling people criminals for seeking mods when you have done the same?"

The really interesting part comes when all of the people on this news group complained about Doug's posts, filed complaints with his ISP, and some posting the "terms of service" from his ISP. That's no different than anyone else posting sections from Part 95. The complaints to his ISP didn't seem to stop his posting or other activities did it?

"Again, what happened to the porn and floods? Gone."

No different than the smug comments posted from various illegal CBers on this news group concerning Part 95 violations, and how they were not going to stop doing their "thing".

"Thing is Leland, you can't prove a damn thing. We can get out here and say we run a million watts and talk skip all day. Don't mean a thing. When Dogie and you reacted, you were spanked. There is a difference, you two reacted out of emotion, in this case anger, which is always a stupid thing to do, and you both made some stupid posts, which were deemed TOS violations. Voila!"

So all in all Doug reduced this group

"Dogie was reduced when he came here almost immediately, but it is always nice to see you reiterate the high regard and esteem for which you hold for him."

to the level where some were waving the "rules" around, for ISP terms of service, and saying how the posts were hurting the character of the news group etc. It seems to me the point of view of whether or not breaking the rules "hurts anybody" depends on which side you're on. In Doug's case the illegal CBers were on the receiving end, and from all the whining done by them it sure seems they didn't like it much. It was interesting seeing how Doug turned several illegal CBers in to whining rule-waving hypocrites, ISP terms of service on one hand and Part 95 rule bashers on the other.

"My, my. Like a deer in the headlights as usual. All this talk of Dogie pile, while you want to pretend yours doesn't exist. Hell, lately, yours is way larger than his."

Jim Jim Jim,

You know that most CB'rs don't run around pickin' a fight with you Hams. CB'rs know to stay off of 10 meters and most other ham bands cause you guys are pretty tight in some respects. We don't cause no trouble to you hams, yet SOME of you hams insist in trying to pick a fight either here in this newsgroup or on the air. Its pretty easy to spot the hams on freeband channels. All you gotta do is listen to 2 meter repeaters nearby and you can hear the same voices on lower 38, or 27.425Mc running their "modified" HF radios. Now I for one don't run to the telephone or computer and try to rat on the ham who is running power on CB. I figure that live and let live and all that. But this is the same type of character who feels that he needs some excitement in his little life and needs to harass users in this newsgroup OR run to the FCC website if he sees an amplifier for sale in any newsgroup. Most of the clowns who are currently harassing users on this group have some need to attempt to make others look small. Pretty silly isn't it to have this type of "border war" going on.
CB'rs attempt to sell any 11 meter gear on rec.radio.swap and hordes of hams swarm around him since the seller isn't part of the "club". Hmmmmmmm...the group is rec.radio.swap....not rec.radio.amateur.swap isn't it? Seems to me you hams have enough newgroups to keep yourselves entertained without bringing your type of garbage that hang in rec.radio.misc to this newsgroup.

4827. Help!!!!!

Newsgroup: rec.radio.cb
Date: 2001-07-17 04:56:47 UTC
From: The Moskal's <larry@sgi.net>
Message-ID: <3B53C58E.8C3A3F44@sgi.net>
Source record: 88945

Does anyone know the correct procedure for tuning a Maco Comet three element beam? I thought I did, but. I have all the measurements correct according to the directions. But when I tune the gamma rods I find it easy to tune in the lower forty with the regular 40 a little high, and the upper forty over 3:1. The only way I can get a pretty flat response is to set all three around 2.5:1 or 3:1. I'm just not exactly sure how the antenna responds to both of the adjustments. I figure there must be a tried and true method of doing this. It's either that or the measurements they provided are wrong and the antenna needs to be shortened a little. Can one of you experienced antenna builders give me a couple of tips. When I set the lower channels to a 1:1 match, I get very good long distance reports.
Thanks a million. Could you respond to larry@sgi.net please.
Thanks again.

Be sure to learn it Farnsworth style, that is, 13wpm characters spaced
in 5wpm time. That's the format of the tests. Besides, it's supposidly
a quicker method to develop faster code speed. Which you'll want
if you decide to get on the air with code.

Troll. And besides the FCC observed itself that there was no
decline in the quality of operations on HF since April '00 when
they rejected the WAD petition for reconsideration of code speed
requirements. If anything, it's gotten better since '313 has
gone away (at least when I listen).

Modems were available - maybe the Trash 80 just would not accept one.

I still have a 110 baud modem that has a nice hardwood case. It is rather
large, as it had to hold the telephone handset - no direct connection to
the telephone line.

Frequent DX - at least during sunspot peaks.

One side of satellite communication could be held via 11 meters, just like
part of 10 meters is used today. There actually have been a few experiments
with SSTV on 11 meters - but it takes too much bandwidth to be practical.

A beam is not a broadbanded antenna. You are lucky if you can get a 1:1
match over 40 channels, and it is probably actually as much as 2:1 when
you get 20 channels away from the resonant channel.

The best you can do is tune for the middle of the regular 40 channels.
When properly tuned, you will NOT get a flat response, even over 40
channels - at least, not close to 1:1.

Can't disagree there either, I've heard those.

> ...OR run to the FCC website if
> he sees
> an amplifier for sale in any newsgroup.

Actually, I don't care if you run more than legal power. If you tune up right over me, and proceed to set the limiters to blast me off-channel...I've got a bone to pick with someone who does that. But still, I won't go whining to the FCC...because I don't like the government on my back as much as the next person does. I think we should be able to self-regulate ourselves...

OK...I do see your point. It is extremely silly to fight over this...because in the end, the FCC can pink-slip both our frequency allocations back to Big Commercial Radio and Corporate Interests.

Peace!

73s,

Jim

Take your word on the echo; it drives me to distraction as do repeaters with bloops and bleeps and gadgets.

Next time you dig out your old C. W. McCall records, listen particularly to Wolf Creek Pass and wonder where they got the female background singers. These were early Chip Davis efforts pre Mannheim Steamroller.

Thank you for quitting pumping the monsoon moisture into the Heartland but the great Gulf weather pump is in full motion. There is something about 72 and morning fog that leads me to believe today might be a bit steamy.

There's indeed a new hurdle at around 8-10 wpm for most people. That
has something to do with making the transition of truly 'processing' the
sound instead of translating the individual letters. The method
mentioned makes this second hurdle quite easy to get by. Once you do,
your speed is pretty much limitless if you get enough practice.

I have been doing fine, thanks. I'm waiting to hear from the local university about my application for the masters program I want to start. I mailed the form in a bit late so I may have to start in the winter semester rather than the fall one.

> I'm drooling over that $700+/- Ten-Tec. Take it easy.

6m has been open several times the last few days. I worked AA4V mobile last night while on the way over to some rental property that is now for sale to water the grass. I have also worked stations in Ohio, Texas, Louisiana, and New York mobile in the last couple of months too. The Ohio station was an Aurora opening, while all the others were E's. If you want to work 6m DX now is the time. The tax refund check, that Bush has the IRS mailing out in the next few weeks, will go a long way to pay for that new Ten-Tec rig. Now all you have to do is come up with a few hundred more bucks and you got it. 8-))

You might want to look at getting an Icom IC-706MKIIG. My brother got one at Dayton last May for around $750 as a show special. I have one I have used mobile for over a year too. I'm sure that several of the mail order vendors have them for not much more than that. For the extra two hundred bucks or so you get all bands from 160m to 6m at 100 watts, 2m at 50 watts, and 70cm at 20 watts. The rig does all modes too, AM, FM, SSB, RTTY, and has jacks for external data modes and amplifier controls etc. I even used the split band mode on this rig to get on the UO-14 satellite a few times mobile, 2m FM up and 70cm FM down.

> poster boy for evasion of reality.

That's a pity. I have hung out on the policy news group for the past couple of years so I have read a lot of the endless debates over CW testing. Other than for several special circumstances I fail to see any reason why CW needs to be treated as a special test element, one which if not passed bars an Amateur from access to the full collection of bands available. That's why I question the need for a CW test as a go / no-go test for H.F. access, and not that I'm against CW use period.

I do dislike your comments about evasion of taking the CW test. I just don't see any overwhelming need for one. Further, any comments about being "lazy" just don't ring true either. If you have read my bio on QRZ you will see I completed a second four year undergraduate degree just because I was interested in the subject, and the fun of doing so. I think you have to agree that required just a wee bit more work than putzing around with a code key. And just for the record I didn't benefit in anyway, such as a pay increase, when I got it either.

I could easily sit here, and "pull a Richard", by questioning your commitment by saying if you can't spent several years of your time to master the basics of a particular subject, through formal education, that you dabble in just for the fun of it, that you're lazy too. I found it easy to do so should everybody else. Now would that be a fair statement?

I do expect the CW requirement to get the axe at the coming WARC in 2003. While many US Hams may not welcome it I think it's going to happen never the less. After all the debates I have read through I still remain unconvinced that CW requires the extra special testing status it currently has. Apparently that feeling is shared by many others Hams world wide, whose Amateur organization's representative at WARC will be pushing to eliminate the CW requirement in S25.

So in the final analysis the question of the CW test is not one of being lazy or not, but of the utility of knowing it or not. CW knowledge is increasingly being replaced by other modes, and the usefulness of extended knowledge in other areas as well. The relative importance of CW, compared

among all of the various areas in Amateur Radio, is out of balance, that's why the need for CW testing is being questioned.

I also find that your comments, about being an "Amateur", to be hollow too. All I see is you hiding behind some convenient word semantics to justify your dislike for Tech Class Hams. I see no difference between an Extra Class Ham who can't even copy his own callsign anymore in CW than a Ham who has never taken a CW test, but has done everything else the former Ham has done. Given the breath and scope of what is now done in Amateur Radio, CW skills seem a very small part of it. I think it was a saying of yours, "it's just a pimple on an elephant's ass", which is how I feel about the distinction. I can't help think you have some other agenda at work when you talk about the subject other than the one you articulate.

> No, I am not going to tell you it's OK
> no matter how often you feel called upon to tilt the windmill or try to play

non-voice.

Exactly. You'll hear places and things on non-voice modes (which means CW
if you *hear* them) that you'll never experience any other way. Once this
was a byproduct of the necessity of learning the code. Today newcomers must
be "enlightned". Glad to see you are there.

And this is not to denigrate any other non-voice modes. Of course some of
then can do things that CW cannot. But the reverse is also true.

> ham
> > bands you assholes.

Yep, another fisherman plies his "trade". But there is an unfortunate
thread of truth to it. It's great that ham radio has attracted so many who
are interested in HF communications, but geez, why can't they change just a
few habits along with changing bands? Hearing "Fist personal here is...."
and "Threes and eights to you old butty" is enough to dump a whole bunch us
into orbit.
And heaven help you if you attempt even the most gentle urging of habit
change, the PC Po-leece will be on your case in a heartbeat.

Remember: One "Awshit" negates 1,000 "Attaboys".

When I took my advanced class exam there were two of us there for examination. The first part of the exam was the code test. The examiner sent us five minutes of code then handed the key to the other guy and ask him to send some code. He was so nervous that all he could send was gribbrish. The examiner said, "why don't you step out into the hall and take a break, have coke from the machine and calm down a bit". He then had me send and by the time we were finished the other guy had settled down enough to pass the sending test. Now that doesn't sound like a we don't care attitude to me.

Hi Dougie, boy you and blow-a-sack really just are the
greatest private dicks. That ad almost looks as though
you put it there, just so you can come out here and
look like you really are doing something.
Keep up the good work, oh and I really love how
you 2 have gone on the car truck motorcycle aircraft
groups and started you legalities campaign there.
Yeah they love the whining about loud pipes bright
head lights smog laws by passed height restrictions,
oversized tires speeding running stop signs littering,
cell phones radar detectors etc etc etc etc.

****
****
I have no interest whatsoever in controlling you or anyone else. I just
get a lot tired of reality-evasion games. On a personal level, I see you
as a poster boy for evasion of reality.

That's a pity. I have hung out on the policy news group for the past
couple of years so I have read a lot of the endless debates over CW
testing. Other than for several special circumstances I fail to see any
reason why CW needs to be treated as a special test element, one which
if not passed bars an Amateur from access to the full collection of
bands available. That's why I question the need for a CW test as a go /
no-go test for H.F. access, and not that I'm against CW use period.
I do dislike your comments about evasion of taking the CW test. I just
don't see any overwhelming need for one. Further, any comments about
being "lazy" just don't ring true either. If you have read my bio on QRZ

"There is the ego thing. As you consistently sign with your call, you
also have to throw in your schooling once in a while, eh? I knew lots of
lazy people in college that still managed to graduate, what the hell
does that have to do with anything?"

you will see I completed a second four year undergraduate degree just
because I was interested in the subject, and the fun of doing so.

"So what? There are several college grads among us here. You think that
somehow makes you better? 'Cause that diploma, like your call, don't
mean squat here."

I think you have to agree that required just a wee bit more work than
putzing around with a code key. And just for the record I didn't benefit
in anyway, such as a pay increase, when I got it either.

"That's 'cause you don't work, Leland. I once asked what shift you
worked but your previous comments concerning your work turned that into
a loaded question rendering you unable to provide for an answer, as
usual. Good job"

I could easily sit here, and "pull a Richard", by questioning your
commitment

"You question everyone's committment about anything but when your
boorish behavior is pointed out your reaction is to point somewhere
else. Ostrich syndrome."

by saying if you can't spent several years of your time to master the basics of a particular subject, through formal education, that you dabble in just for the fun of it, that you're lazy too. I found it easy to do so should everybody else. Now would that be a fair statement?
I do expect the CW requirement to get the axe at the coming WARC in 2003. While many US Hams may not welcome it I think it's going to happen never the less. After all the debates I have read through I still remain unconvinced that CW requires the extra special testing status it currently has. Apparently that feeling is shared by many others Hams world wide, whose Amateur organization's representative at WARC will be pushing to eliminate the CW requirement in S25.
So in the final analysis the question of the CW test is not one of being lazy or not, but of the utility of knowing it or not. CW knowledge is increasingly being replaced by other modes, and the usefulness of extended knowledge in other areas as well. The relative importance of CW, compared among all of the various areas in Amateur Radio, is out of balance, that's why the need for CW testing is being questioned.
I also find that your comments, about being an "Amateur", to be hollow too. All I see is you hiding behind some convenient word semantics to justify your dislike for Tech Class Hams.

"That's what you call hiding? Nah, your alias addys and forges are what is known as "hiding."

I see no difference between an Extra Class Ham who can't even copy his own callsign anymore in CW than a Ham who has never taken a CW test, but has done everything else the former Ham has done. Given the breath and scope of what is now done in Amateur Radio, CW skills seem a very small part of it. I think it was a saying of yours, "it's just a pimple on an elephant's ass", which is how I feel about the distinction. I can't help think you have some other agenda at work when you talk about the subject other than the one you articulate.

"I can't help but think you have another agenda just in being here. Your disdain for cbers is well known and documented and the comments you make are always self-serving."

No, I am not going to tell you it's OK
no matter how often you feel called upon to tilt the windmill or try to play games. I owe you that.

I don't consider it a game.

That is possible. The questions I ask myself when doing some project are:

1. Is it cheaper for me to build or by it? That also includes the cost of
fixing whatever gets damaged in the process if anything.
2. Am I going to enjoy building it and learn something from the experience?
3. Do I have the time?
4. Which option presents the simplest solution?

Somewhere there is an solution that balances the 4 items above. Of course
it's not going to be the same for everybody.

That would be a really good idea from a safety stand point, a good sized
headlight.

The only company credit cards we do get are an AT&T phone card and an airline ticket card. Everything else we have to use our own card, and that even includes the senior management too. So if the company folds because they screwed up at least management get burned too. 8-))

All honest hams and CB hobbyists should by now be appalled by the havoc that the guns, along with their Second Amendment obsessed gun nuts, has wrought to our country. Millions of innocent children die. It is now time to unite and defeat the obsolete, redundant "liberty" of owning deadly tools of destructions. Woodworkers, who love working with tools to create things, hate guns, which are only designed to kill. Please make a contribution to Handgun Control today.

Do a good thing, throw away your guns, and replace the void in your life with radio equipment. Radios do not kill, guns do.

I've got the ARRL tapes, "Code Quick" by w6tjp, and around somewhere I have
Jerry Zilliac's tapes (which I ended up memorizing). If I had known that
w5yi offered them, I would have bought them, too.
I also have half a shoe box full of tapes some old boy mailed me. He swore
by the w1aw code practice heard at 3.5815 MHz after 7pm weeknights (I don't
think he ever nailed the tech test, he was a novice with a CSCE for 13 wpm).

I think the best practice is getting on the air and trying to communicate.
I know it's tough to do this as a no-code tech. A lot of the guys who
upgraded the same time as I did got together on 2 meter simplex and
practiced with modulated CW. This can be done with any 2 meter radio. But,
this is no substitute for pure CW mode so you must stay out of the CW
sub-band.... roger?!
I think all those guys were old school CB'ers. They went from no-code to
extra in about a year.

NOT only are you communist, but your statements VIOLATE the 2nd Amendment, AND the LAWS of God, as stated in the Old and New Testaments. IF you throw your radio or wordwork device hard enough, it will kill too. The problem is NOT the guns, it is you liberals & commies that are trying to take them away from us SO YOU CAN KILL US and have a mass slaughter, just like they did in times past after they took away OUR Guns. You can have our CB's, Guns, and Bibles when you pry them from our COLD, DEAD hands, YOU MURDERER! WHY do you want to dis-arm us, so you can kill us? Aren't we practicing enough communism already? GOD is against you, and so are WE ! REPENT before it's too late! READ the 2nd Amendment, if you know how to!!!!!!!!!!
It's a God given RIGHT !!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!

"WQ1XYU" <hammmmmmm@aol.com> wrote in message news:995391100318028@aol.com...
All honest hams and CB hobbyists should by now be appalled by the havoc that the guns, along with their Second Amendment obsessed gun nuts, has wrought to our country. Millions of innocent children die. It is now time to unite and defeat the obsolete, redundant "liberty" of owning deadly tools of destructions. Woodworkers, who love working with tools to create things, hate guns, which are only designed to kill. Please make a contribution to Handgun Control today.

Do a good thing, throw away your guns, and replace the void in your life with radio equipment. Radios do not kill, guns do.

4873. Snotty Hamateurs---I love it!!!!

If you don't like it, don't join. I only use 40 channels, you won't find me
off frequency. I don't care for hamateur radio, you won't find me there.

Are you a snotty hamateur? Do you freeband? Do you have a life?

I really don't care what your answers are. You are a whiny do-nothing.

To borrow a phrase, "BOOOORRRRIIINNNGGG!"

Twould appear you know more of my inner feelings than I do. Glorioski, the Psychic Hot Line rides again.

It might surprise you to know that I did not ever think more than 12 wpm was ever justified for anything. It might also surprise you to know that by and large I think it is indeed time to eliminate cw testing as a license requirement although the hobby will give up some cohesion in the process. I can say that with some degree of credibility because once in my life I did 100 characters in a row at 100 characters per minute counting two for numbers and punctuation. I have taken my last exam so whatever else it might be, self-serving is not among them.

But neither my opinion nor yours means squat. What matters is section 25.5 of the treaty governing radio on this planet. So long as it is in place, there is no debate. So long as an Amateur is defined in the treaty as knowing Morse, one who does not is not an Amateur within the meaning and scope of the treaty which is the world below 30 MHz in this case. Whether I love you, respect you, or consider you my equal is of far more importance to you than it is to me.

With all the time you spent chasing me around bitching about my refusal to omit reality 'cause it made you feel real bad, I figure you could easily be deep into at least lesson 3 of 7 in Morse Academy. What part of 'recognize existential reality' are you having problems grasping?

History buffs will remind us that every time a government has confiscated weapons from the public, vicious human rights violations have followed. Most notably is the gun control that Hitler enacted in the late 30's.
Recent history has shown us that when guns are banned, crime rates start to climb.
When concealed carry laws are passed, crime rates begin to fall.
Criminals will not obey any gun control legislation. Look up criminal in the dictionary, if you must. It is one who does not obey the law.
This must be a troll post judging by the statement "redundant liberty". I have two words for that statement (one starts with an F the other starts with a Y).

I say buy more guns to protect your radios, families and homes from criminals.
An armed society is a polite society.

I've thought about this for a while and came to the conclusion that my life has enough depth that I need to look somewhere other than Beverly Hillbillies episodes (or any other sit-coms, for that matter) for a moral compass.
Besides, Jethro Bodine thinking is what made America great.
Consider the Wright Brothers.....

And, to be on topic, I would invest that $1000 into upgrading my antenna system rather that buying a high voltage spatterbox.

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart E - Techincal Regulations
Revised as of September 22, 1988 (unless otherwise noted)
ï¿½
General Provisions
95.601 Basis and purpose.
95.603 Type acceptance or certification required.
95.607 CB transmitter modification.
Technical Standards
95.625 CB transmitter channel frequencies.
95.637 Modulation standards.
95.639 Maximum transmitter power.
Type Acceptance Requirements
95.645 Control accessibility.
95.649 Power capability.
95.653 Instructions and warnings.
95.655 Frequency capability.
Additional Type Acceptance Requirements For CB Transmitters
95.665 [Reserved]
95.667 CB transmitter power.
95.669 External controls.
95.671 Serial number.
95.673 Copy of rules.

General Provisions
Sec. 95.601 Basis and purpose.
These rules provide the technical standards to which each transmitter (apparatus that converts electrical energy received from a source into RF (radio frequency) energy capable of being radiated) used or intended to be used in a station authorized in any of the Personal Radio Services must comply. They also provide requirements for obtaining type acceptance of such transmitters.
The Personal Radio Services are

* GMRS (General Mobile Radio Service)
* Family Radio Service (FRS)
* R/C (Radio Control Radio Service)
* CB (Citizens Band Radio Service)

For operating rules, see part 95, subpart A-GMRS; subpart B-FRS; subpart C-R/C; and subpart D-CB.

[June 6, 1996]

Sec. 95.603 Type acceptance or certification required.
(c) Each CB transmitter (a transmitter that operates or is intended to operate at a station authorized in the CB) must be type accepted. No CB transmitter type accepted pursuant to an application filed prior to September 10, 1976, shall be manufactured or marketed.
[Sept. 4, 1996]

Sec. 95.605 Type acceptance and certification procedures.
Any entity must request type acceptance for its transmitter when the transmitter is used in the GMRS, R/C or CB Radio Service, or IVDS following the procedures in part 2 of this chapter. Any entity must request certification for its transmitter when the transmitter is used in the FRS following the procedures in subpart J of part 2 of this chapter.
[June 6, 1996]

Sec. 95.607 CB transmitter modification.
Only the holder of the grant of authorization of the particular type accepted CB transmitter may make the modifications permitted under the provisions for type acceptance (see part 2 of this chapter.) No grantee shall make any of the following modifications to the transmitter without prior written permission from the FCC (Federal Communications Commission):
(a) The addition of any accessory or device not specified in the application for type acceptance and authorized by the FCC in granting the type acceptance;
(b) The addition of any switch, control or external connection;
(c) Any modification to provide for additional transmitting frequencies, increased modulation level, a different form of modulation, or increased TP (RF transmitter power expressed in W (watts), either mean power (TP averaged over at least 30 cycles of the lowest modulating frequency, typically 0.1 seconds at maximum power) or peak envelope power (TP averaged during 1 RF cycle at the highest crest of the modulation envelope), as measured at the transmitter output antenna terminals.)

Technical Standards
Sec. 95.625 CB transmitter channel frequencies.
(a) The CB transmitter channel frequencies are:

Channel No.	(MHz)
1	26.965
2	26.975
3	26.985
4	27.005
5	27.015
6	27.025

7..... 27.035
8..... 27.055
9..... 27.065
10..... 27.075
11..... 27.085
12..... 27.105
13..... 27.115
14..... 27.125
15..... 27.135
16..... 27.155
17..... 27.165
18..... 27.175
19..... 27.185
20..... 27.205
21..... 27.215
22..... 27.225
23..... 27.255
24..... 27.235
25..... 27.245
26..... 27.265
27..... 27.275
28..... 27.285
29..... 27.295
30..... 27.305
31..... 27.315
32..... 27.325
33..... 27.335
34..... 27.345
35..... 27.355
36..... 27.365
37..... 27.375
38..... 27.385
39..... 27.395
40..... 27.405

(b) Each CB transmitter must be maintained within a frequency tolerance of 0.005%.

Sec. 95.637 Modulation standards.
(d) When emission type A3E is transmitted by a CB transmitter having a TP of greater than 2.5 W, the CB transmitter must automatically prevent the modulation from exceeding 100%.
(e) Each CB transmitter that transmits emission type H3E, J3E or R3E must be capable of transmitting the upper sideband. The capability of also transmitting the lower sideband is permitted.
[Oct. 4, 1996]

Sec. 95.639 Maximum transmitter power.
(c) No CB transmitter, under any condition of modulation, shall exceed:
ï¿½ï¿½ï¿½(1) 4 W Carrier power when transmitting emission type A1D or A3E;

ï¿½ï¿½ï¿½(2) 12 W peak envelope TP when transmitting emission type H1D, J1D, R1D, H3E, J3E or R3E. Each CB transmitter which transmits emission type H3E, J3E or R3E must automatically prevent the TP from exceeding 12 W peak envelope TP or the manufacturer's rated peak envelope TP, whichever is less.
[Oct. 4, 1996]

Type Acceptance Requirements
Sec. 95.645 Control accessibility.
(a) No control, switch or other type of adjustment which, when manipulated, can result in a violation of the rules shall be accessible from the transmitter operating panel or from exterior of the transmitter enclosure.
[Oct. 4, 1996]

Sec. 95.649 Power capability.
No CB or R/C station transmitter or FRS unit shall incorporate provisions for increasing its transmitter power to any level in excess of the limit specified in Sec. 95.637.
[June 6, 1996]

Sec. 95.653 Instructions and warnings.
(a) A user's instruction manual must be supplied with each transmitter marketed, and one copy (a draft or preliminary copy is acceptable provided a final copy is provided when completed) must be forwarded to the FCC with each request for type acceptance.
(b) The instruction manual must contain all information necessary for the proper installation and operation of the transmitter including:
ï¿½ï¿½ï¿½(1) Instructions concerning all controls, adjustments and switches that may be operated or adjusted without resulting in a violation of the rules.
ï¿½ï¿½ï¿½(2) Warnings concerning any adjustment that could result in a violation of the rules or that is recommended to be performed by or under the immediate supervision and responsibility of a person certified as technically qualified to perform transmitter maintenance and repair duties in the private land mobile services and fixed services by an organization or committee representative of users of those services.
ï¿½ï¿½ï¿½(3) Warnings concerning the replacement of any transmitter component (crystal, semiconductor, etc.) that could result in a violation of the rules.
ï¿½ï¿½ï¿½(4) For a CMRS transmitter, warnings concerning licensing requirements and information concerning license application procedures.
[Oct. 4, 1996]

Sec. 95.655 Frequency capability.
(a) No transmitter will be type accepted for use in the CB service if it is equipped with a frequency capability not listed in Sec. 95.625, and no transmitter will be type accepted for use in the GMRS if it is

equipped with a frequency capability not listed in Sec. 95.621, unless such transmitter is also type accepted for use in another radio service for which the frequency is authorized and for which type acceptance is also required. (Transmitters with frequency capability for the Amateur Radio Services, Military Affiliate Radio System and Civil Air Patrol will not be type accepted.)
(b) All frequency determining circuitry (including crystals) and programming controls in each CB transmitter and in each GMRS transmitter must be internal to the transmitter and must not be accessible from the exterior of the transmitter operating panel or from the exterior of the transmitter enclosure.
(c) No add-on device, whether internal or external, the function of which is to extend the transmitting frequency capability of a CB transmitter beyond its original capability, shall be manufactured, sold or attached to any CB station transmitter.
[Oct. 4, 1996]

Additional Type Acceptance Requirements for CB Transmitters
Sec. 95.665 [Reserved]

Sec. 95.667 CB transmitter power.
The dissipation rating of all the semiconductors or electron tubes which supply RF power to the antenna terminals of each CB transmitter must not exceed 10 W. For semiconductors, the dissipation rating is the greater of the collector or device dissipation value established by the manufacturer of the semiconductor. These values may be temperature de- rated by no more than 50 deg. C. For an electron tube, the dissipation rating is the Intermittent Commercial and Amateur Service plate dissipation value established by the manufacturer of the electron tube.
[Oct. 4, 1996]

Sec. 95.669 External controls.
(a) Only the following external transmitter controls, connections or devices will normally be permitted in a CB transmitter:
ï¿½ï¿½ï¿½(1) Primary power connection. (Circuitry or devices such as rectifiers, transformers, or inverters which provide the nominal rated transmitter primary supply voltage may be used without voiding the transmitter type acceptance.)
ï¿½ï¿½ï¿½(2) Microphone connection.
ï¿½ï¿½ï¿½(3) Antenna terminals.
ï¿½ï¿½ï¿½(4) Audio frequency power amplifier output connector and selector switch.
ï¿½ï¿½ï¿½(5) On-off switch for primary power to transmitter. This switch may be combined with receiver controls such as the receiver on-off switch and volume control.
ï¿½ï¿½ï¿½(6) Upper/lower sideband selector switch (for a transmitter that transmits emission type H3E, J3E or R3E).
ï¿½ï¿½ï¿½(7) Carrier level selector control (for a transmitter that transmits emission type H3E, J3E or R3E.) This control may be combined

with the sideband selector switch.
ï¿½ï¿½ï¿½(8) Channel frequency selector switch.
ï¿½ï¿½ï¿½(9) Transmit/receive selector switch.
ï¿½ï¿½ï¿½(10) Meter(s) and selector switch(es) for monitoring transmitter performance.
(11) Pilot lamp(s) or meter(s) to indicate the presence of RF output power or that the transmitter control circuits are activated to transmit.
(b) The FCC may authorize additional controls, connections or devices after considering the functions to be performed by such additions.
[Oct. 4, 1996]

Sec. 95.671 Serial number.
The serial number of each CB transmitter must be engraved on the transmitter chassis.
[Oct. 4, 1996]

Sec. 95.673 Copy of rules.
A copy of part 95, subpart D, of the FCC Rules, current at the time of packing of the transmitter, must be furnished with each CB transmitter marketed.

There are plenty in the NG who see dropping the maul on mud ducks
(i.e. interfering with weaker signals) as a sport. But as long as you
are not effected, everything is fine.

> But
> still, I won't go whining to the FCC...because I don't like the
> government on my back as much as the next person does. I think we
> should be able to self-regulate ourselves...

Self-regulation only works to an extent. How does having enforcement
in place for use against legitimate violators constitute "government
on your back"? I suppose we could do away with police and issue all
citizens shotguns but although that might work for you it would not
work for lots of other people.

> OK...I do see your point. It is extremely silly to fight over
> this...because in the end, the FCC can pink-slip both our frequency
> allocations back to Big Commercial Radio and Corporate Interests.

Well the FCC certainly won't take your frequency allocations away just
because you report legitimate violators to the FCC.

Actually stupid people with guns kill people. Uneducated psychopaths with guns, knifes, lawn mowers, chicken bones, baseball bats, tire irons, 2x4's (some with the rusty nails still in the board) also kill people. boy i should stop mentioning things that people use to kill oters or other items that are also known to kill people. We better get rid of swimming pools too, hell all large bodies of water. No more baths for our children anymore either, if we need to bathe them we can teach them to shower like the rest of us right?

Sure I do. You just don't like it.

> Did you see his QRZ page pre-Twisted's corrections? No? Would you like to?

Yeah, why don't you. Seems like you can't spell either. Case in
point ->"doeesn't" And this is from somebody who claims to be a writer, but
can't even correctly spell common words. Maybe I should include that link to
your really crappy article you wrote so he can properly judge your lack of
skills. Several people on the group here did an excellent job of
deconstructing your lousy prose. It maybe a lot of fun to do it again. How
about it Twisted? You game for it? Fair is fair.

http://sporadic1.tripod.com/page7.html

Well Twisted you want everybody on this news group to start hitting on you
again to provide that so-called proof, which you never seem to produce. I
bet Prozacholic would like to see it along with everybody else.

You have been blowing smoke with this story for months Twisted, and you're
even starting to run out of that too.

You picked a poor example in the case of the Wright Bros. We seem to have a picture of Orville and Wilbur as two mildly wierd guys still living at home in Ohio fiddling with bikes and gliders.

The reality was two guys making good bucks in the CB craze of the time to pay for experiments in flight brought on by some very good and disciplined engineering while supporting an extended family. Orville was a first rate number cruncher constantly bugging other air experimenters for their numbers and complaining loudly about seat-of-the-pants design. Along the way to the airplane, Orville invented the wind tunnel.

Orville was a Kelly Johnson, not a Jethro Bodine.

Dick

Hey folks... After many (20+ years) of AM only operation, I've
finally managed to get my hands on a SSB base station that wasn't TOO
badly mangled due to incompetence with a soldering iron..

Anyway, was wondering if there is some sort of a convention that is
followed in regards to USB/LSB operation. Where is the upper sideband
typically used, and where is the lower used? Just wondering...

Thanks much...

Ray,

Well, I am glad that you have joined the ranks of SSB operators. First of all, things have changed a lot in the last several years. There are not too many operators (at least in my area) still using SSB.

1) First names, versus "handles" are the norm. Drop the handle.

2) 10 codes are shunned. Talk like you are talking on your telephone.

3) LSB (lower sideband) is usually preferred over USB but it is not "cut in stone."

4) As far as USB versus LSB - it depends on your location to other SSB users. If you can hear someone on LSB, don't use USB, because you will interfere with that operator. If no one is on LSB, make your call on the "upperside." Then listen to see if you are interfering with anyone on lowerside.

That is about all that I can think of at the moment.

Cheers

Brian

Hello Moskals:

Call the guys at MaCo, and ask them. They seem to have been helpful in the past.

Also look at:
http://www.majestic-comm.com/maco/support/index.htm

Look at this assembly manual for the MaCo M103C, which can be downloaded and printed out. They give assembly instruction for the different frequencies, that might be correlated to work on the 3 element Comet Beam Antenna.

The 3 Element Comet Beam Antenna can be made to work where you want it to. Its entirely possible that MaCo has the dimensons on hand!

If not we can work out the numbers to get it to fire on all eight for your frequencies.

Jay in the Mojave

You left out that federal gun control laws as we have them now were ORIGINALLY copied from that same Nazi gun control (read confiscation) program. First get them all registered so when they want to come and get them they already know where to look and who to look at.

I think one could view this troll as the similarity between banning guns because they "could" be used for wrongdoing just as a CB "could" be modified to work on illegal frequencies just as a "ham" radio could be and so on and so on. This is the typical "ban anything that could be used improperly" attitude that some people have been trying to impose on society. Everything from CB radios to guns to probably kitchen knives, matches, what's next?

Okay all you anti-cb folks, lets get all fired up again. I just can't resist getting you all excited over nothing! Ha Ha!

The typical "

Source record: 89032

While a power mic (if adjusted correctly) can make your signal more intelligable at a greater distance... the echo effect will negate all your gains. An echo is a form of distortion of the original audio sound and will not enhance your range. The major telephone companies(RBOCs) spend millions of dollars on "echo cancelling" electronics at the central office switching stations for just that reason. The echo is purely a toy for making noises on the air... no more.

find someone with a MJF 259 antenna analyzer. Get them to lend it to you or help you adjust it until you get it straight! It will allow you to see where your strengths and weaknesses are very quickly as it shows impedence and swr by frequency over a wide range from each adjustment.

Probably not but it is an idea whose time is nearly here. Any number of good rigs have been subject to computer control, the Ten-Tec Pegasus and RX-320 (I share Bert's liking for the boys from Dolly Parton Parkway) require it, and it is really a better and cheaper way to operate electronic gear these days.

After watching car radios replace slug tuning with PLLs and microprocessors, VCRs that are essentially fly-by-wire, and realizing that the chip in my car already knows everything on the instrument panel lacking only a read-out scheme that works to finally flush the speedocable from the civilized world, why the hell not use your PC as a radio control?

Can anyone tell me if they have ever heard of a "Swinger 205"? It is a bilaterial,grounded grid affair using dual 6lq6 sweep tubes.Tube manual says max dissipation of the beam power 6lq6 is 28 watts.So is it approx 56 watts output? I am repairing this for a duly licenced ham operator and I am a licenced Fcc Technician. Thank you for any assistance

Perhaps my impression of them is wrong.
I was told that everyone figured they were crazy for attempting flight.

I was thinking about that, Train. But, I couldn't remember the year the Nazi version came out. The man (whos name escapes me) that introduced the bill which lead to the GCA of 1964 worked as a translator in post WWII Germany translating documents. It's too bad more people don't know that fact.
It's scary how history repeats itself.

Janet Reno wasn't attorney general when Vicki Weaver was killed in August of 1992.
This happened nearly 5 months before Clinton took office (January 1993).
Bill Clinton appointed Janet Reno.
She did, however, refuse to prosecute the dirt bag that shot Weaver's wife (Lon Horiuchi).

Dave or Debby <truth@planetc.com> wrote in message news:3b54e802@news.planetc.com...

Guns have saved millions more children. You bleeding hearts will never learn from history- and it will repeat itself someday in this country if you succeed in taking our firearms away. Just look a history and wake up. In 1928 the Weimar administration in Germany banned guns- anyone remember what Hitler did a few years later??? In 1911 guns were banned in Turkey- by 1917 1 million Armenians were murdered. In 1929 guns were banned in Russia- over the next 30 years an estimated 1 million anti communists were extinguished by their so-called humanisitic-socialist government. In 1970 Guns were banned in Uganda.... By 1971 300,000 Christians were murdered- just some good old ethnic cleansing, hmmm Bosnia- sound familiar??? This has also happened in China, Guatamala, and Cambodia- all during the 20th century. So why dont you bleeding heart hippies open up your history books and see how history has proven that banning guns actually gets more children killed- WAKE UP!

While we are on history:

1. No citizen army has ever stood up to disciplined regulars. Even George Washington had to have the von Steuben's et al to build a regular army.

2. The casualty rate where unarmed people simply charged and clubbed troopers rarely exceeded 12:1. Even concentration camps had successful breakouts, Sobibor for one.

3. Where life is sold dearly, it is extremely hard to subjugate a population. Those admiring the characters in Anne Frank might well ask whether business as usual was pro-survival. In most of these capers, there was no surplus of polizia. Bump a few off and things collapse.

If holding off the guvmint is what you have in mind, planning to play spray-and-pray with the pros is stuppeeeeeed. A first-rate sniper rifle (some damn good 8mm Mausers are available), some ex police revolvers (forget the big magazine 9mm autos, do some damage and run like hell), and a good pump shotgun for defense (now is not the time to worry about the wallpaper) are far more useful than all the AKs ever produced.

The hard part is in one's head. If you come to the conclusion that there are worse things than dropping dead and in fact assume you are dead then things work a lot better.

This whole gun thing has gotten so shrill that it is blessed hard to tell the hunters from the crazies from the patriots from the hobbyists and collectors from the drug dealers from Civil War and Revolutionary War reenacters. Time for the Holy Hand Grenade.

Dick

Given the engines of the era they probably were. Only 12-15 years later
pilots were flying rotary engines (like a radial but the crankshaft was
stationary, the cylinders rotated) lubed with castor oil. Most pilots had
the worst case of the Green Apple Two-step the world has ever seen.

Leland, you know better than to expect a normal exchange from this
circus clown. All he can do is wiggle his big red nose and squirt
water from the flower in his lapel. Very entertaining but ultimately
useless.

More than likely it is on a separate board that can be traded back for a $5 credit. What do 2222s go for these days when you buy the sweepings off the floor?

Actually I was surprised to see as much key click filtering as there was but this circuit looks like it would chirp like a cage full of canaries.

With all due respect Aaron, investigated for what?? I see nothing here that is remotely illegal even if, like butcher knives and anhydrous ammonia, the product can be used illegally.

Such overstatements do nothing for your campaign.

Dick

If you are going to keep your vehicle a while, you might as well get the most out of it that you can. Please reconsider a permanent mount. If the garage is the only issue, there are doo-hickeys that will let you quickly remove an antenna from the mount, and others that will allow you to fold the antenna down. You can get through-hole mounts with SO-239 connectors so the coax doesn't have to be permanently attached. And a permanent mount on the roof will give about the best RF performance you can get. If the hole is a resale issue, you can pick up a hole plug, paint it the same color, and it will probably not even be noticed by the next owner of the vehicle.

With a couple caps and a couple rectifiers you can build a voltage
doubler -- AC in, filtered DC out. Use that to charge a 12V gell-cell
through a resistor, or use an LM350 to regulate it directly if it
provides enough current. The whole wad, battery and all, can fit into
a cigar box. The only real problem I see is getting a good RF ground
from such a small bike.

>Radio mounting is a bit of a problem, I'll pay a bit of a premium for
>something small.

Actually, there are several very small CB's on the market. Radio Shack recently had one on sale that would fit in the palm of your hand. Other manufacturers have their tiny versions, also. These meet a growing demand for something which will mount in today's "no available space" vehicles. In some cases, the radio will replace the ashtray, giving that "console" appearance.

It is very important that the radio and mike cord not interfere with your feet as you switch from gas to brake pedal.

If the mounting position "mutes" the built-in speaker, use a small external speaker to improve clarity.

I have one vehicle where the only spot for the radio was under the driver's seat. If you don't change channels, this isn't bad. I've learned to run the controls quite efficiently by touch.

Another alternative is to purchase one of the CB's where the radio mounts in an "out of the way" place and all the controls are on the microphone.

That's all well and good for ham radios(On ham bands). But any
modification like this on a CB, voids type acceptance. Anything that
allows operation on channels other than the legal 40 is illegal. That is
why it should not be done.

What you really mean is you "think" the hobby will give up some cohesion in
the process. That remains to be seen since CW testing has not been
eliminated yet.

I knew this was the one you would dig up Twisted, no surprise there, that's why I asked you "where". I can't resist the chance to make a fool out of you when you make it so easy. Modifying any radio for operation in the Hams bands and operated by a Ham is perfectly legal to do. Of course you knew that didn't you? On the flip side modifying a CB to operate out of band on frequencies where the operator has zero license to work is of course illegal. No hypocrisy there. Try again Twisted.

For those interested the reason for the request was to get a cheap rig to set up a packet station. FRS radios are cheaper than some of the low end Ham HTs I have looked at. Right now I'm using a FT-817, when it's not being used portable, on 145.01 MHz 1k2 AFSK packet.

More like a warning I would say. Yes you could be right that Doug was not
responsible for most of it, but somebody sure was, and they really liked
getting Twisted's shorts tied up in a knot. If Twisted wants to return to
his old habits who knows what that may trigger. He's already back at the old
crap about forged posts again. He can't seem to admit he screwed up, and
pointed fingers at all the wrong people.

The bait and switch comment is in reference to how some, namely Twisted, likes to conduct his business here. He will post something you said, then tries to make it seem you said something else, thus his name - Twistedhed, just like his logic.

I don't smoke. I have a friend, about 4 years older than me, who has lung cancer from it. It spread from there to the lymph nodes in his chest, and his left hip bone. Doctor gave him about a 20 percent chance of making a full recovery.

Leland doeesn't operate with logic.

Sure I do. You just don't like it.

"Don't lie Leland. It diminishes what appearance you manage to hold onto
for the anti stooges. I can care less about what you logic is..as I
said, why not go back and see which one of us started conversing with
the other first. You gave your views to me about legalities, I gave you
mine, and you began to whine. I would never have addressed you for any
reason unless addressed first."
"
Did you see his QRZ page pre-Twisted's corrections? No? Would you like
to?

Yeah, why don't you. Seems like you can't spell either.

"Either? Au contraire. Don't try to figure out what I have already
explained, you may injure yourself attempting. I do not use spell check,
nor do I look at my keys and plunk with my index finger, but you can
rest assured when it is something that I put out there for the public to
see and I give a rats about it, it will be correct.. Your QRZ page
looked like it was done by a third grader, grammar, spelling, etc., and
it had all this bragging in there about "education"...ROFLMAO!.You
didn't even check it with spell check before you threw it up. A typo is
one thing, but ignorance is another."

Case in point ->"doeesn't" And this is from somebody who claims to be
a writer,

"Um, wait a second. I NEVER claimed to be a writer until you guys found
an article I wrote under the twisted moniker and posted it here. Once
again, you are wrong, and a liar as usual."

but can't even correctly spell common words. Maybe I should include that
link to your really crappy article you wrote so he can properly judge
your lack of skills.

"Knock yourself out. He's been here since the beginning and knows what a
jack ass you are."

Several people on the group here did an excellent job of deconstructing
your lousy prose. It maybe a lot of fun to do it again. How about it
Twisted? You game for it? Fair is fair.

"Careful, you are about to let that temper take over and post in anger, but go for it. Everytime you post that link, new subscribers come in, and I get email. Hell, post it in the ham forums, last time you did it, I received all kinds of REAL positive responses with real call signs attached to the posts. Here again is what plagues you and makes you miserable. You can not distinguish between reality anymore Leland. As was pointed out to you, this is called "REC.radio.cb", rec being short for "recreation" which is not work. Since it is not work, I am not conerned in the slightest about my typos and errors. You try to link the two..HAHHAHAH..as you tried to do with what we talk about (linears, illegal mods, etc.) with your actual ACTIONS (IE: your posts that got you disciplined and slammed from those anonymous sites)..ahaha!! It is called "detatched from reality."

http://sporadic1.tripod.com/page7.html Definitely not logic.

True, it won't take the heat off him, but it didn't stop him from trying before by forging himself and attacking himself from an alias trying to fashion it and imitate other's posting styles so another would get the blame."

Well Twisted you want everybody on this news group to start hitting on you again to provide that so-called proof,

"Um, everyone never did, just you and your stoges from different remote, phoney aliases.HAhahah! You're a beat, Leland."

which you never seem to produce. I bet Prozacholic would like to see it along with everybody else.

"I could care less what he wants. He avoids questions almost as bad as you, therefore, he deserves no explanation."

You have been blowing smoke with this story for months Twisted, and you're even starting to run out of that too.

"Why does it bother you such if it's not true? Since you brought it up, there were others in here that said the same thing about you, Leland, and very recently. I don't see you responding to those accusations, just mine, which once again, shows what the score is, was, and always will be."

Leland C. Scott, KCLDO, in anger typed:

I knew this was the one you would dig up Twisted, no surprise there,
that's why I asked you "where".

"And I knew which you would reply to. Now address the attempted
circumventing of antenna restrictions."

I can't resist the chance to make a fool out of you when you make it so
easy. Modifying any radio for operation in the Hams bands and operated
by a Ham is perfectly legal to do. Of course you knew that didn't you?
On the flip side modifying a CB to operate out of band on frequencies
where the operator has zero license to work is of course illegal. No
hypocrisy there. Try again Twisted.

"Ok. The antenna thing. The blanket comment you made about cbers.
There's two to keep you lying, er, occupied."

For those interested

"No one is interested. I brought it up to illustrate a point. If it is
legal, more power to ya'. I'm not a hammie (or am I?) so I don't know
the regulations pertaining to such, but I do believe that it was illegal
at that time to perform ANY modifications to FRS radios, was it not?."

the reason for the request was to get a cheap rig to set up a packet
station. FRS radios are cheaper than some of the low end Ham HTs I have
looked at. Right now I'm using a FT-817, when it's not being used
portable, on 145.01 MHz 1k2 AFSK packet.

5004. SWR Tuning Issues, Please Help

Newsgroup: rec.radio.cb
Date: 2001-07-18 16:08:10 UTC
From: Chad Jordan <cwj323@qwest.net>
Message-ID: <y5t57.904$s8.450533@news.uswest.net>
Source record: 89117

I have a issue with my tuning experience that I hope you could give me some advice on. I have a external Diesel SWR meter with a 3' regular coax cable to connect with. My radio is a Radio Shack model with a SWR meter built in. My procedure has been to hook this all up and using the external SWR everything work great. I can get around 1.7 or lower on all channels. Here is where I run into trouble. I remove the 3' cable and the external SWR and try to verify my work with the internal SWR and it comes back with a reading of 3. I also tried just tuning with the internal meter and the lowest she'll go is 2.

Any help you could provide for me would be great. Thanks!!

Big Red Undies wrote:
You know Twisted if you even had one shred of proof positive you would be posting it all over this news group. Instead all you do is shoot your mouth off over proof you don't have because this is none. Neither you nor anybody else has ever posted poof to support your claim. What material you did post was pointed out at the time, by others

"By you and your stooges, so that means nothing."

here in the group, to contradict your claims. You repeatedly made the false claim,

"I wasn't the only one you forged, and I did prove it. The proof wasn't good enough for you, too bad. Since your false concern lies with the group so much, I will go out on a limb myself. I never claimed to speak for the group like you do by way of your self appointed status, but this once I will make an exception since others concerns somehow always manage to become your concerns. I think the entire group knows you were involved with Dogie and Sparky with the harassment campaign, but that is my opinion and I know how you value my input."

and repeatedly it was pointed out where you where in error. You want some respect from me, or anybody else for that matter, you can simply admit your wrong, and this business can be concluded.

"I did admit I was wrong to Sparky about working in Atlanta. I indeed forgot that I told him long ago. It was well before I learned that the only reason you stooges want personal information is for negativity and before I learned not to trust you or your two stooges."

If not I can be just, if not more, stubborn as you are,

"You are an absolute hoot. I am amused that you think that much of yourself to think that I give a thought to your acts. My posts are spontaneous, leland. I don't plow through Deja and essay what I am going to write."

I only r and then we will see who gives up first, and it will not be me.

"Give up? Give up what? Is that how you see this? Dude, get a grip. You're so pissed you're starting to babble and not make sense in your posts."

> Does anybody know an antenna that is suitable to put on a composite-body
> vehicle such as a boat or camper ?

A half wave would work, no ground required. Depending on the band the antenna may be a bit large, In that case a quarter wave can be used with a ground plane. Since a composite care body is non-conductive people have used conductive foil tape laid out in a "X" pattern with the vertical element located at the center of the "X". To hide the foil tape it has been installed on the inside of the body panels. For boats people have just hung a wire over the side in to the water, or used a sheet of metal like copper of aluminum fasten to the underside of the boat below the water line. Then the ground side of a quarter wave is run to the plate.

> And I described an easy experiment that proves otherwise.

On the contrary, you did an experiment and jumped to a conclusion.
You obtained two different readings and concluded that the SWR
meter is being fooled. You haven't considered the possibility
that other parameters (e.g. line loss, common mode currents,
tolerances, etc.) have indeed changed the SWR.

That is the problem with relying on an individual observation and
allowing it to supersede the theory which is, in fact, based on
countless observations made by many experts over a period of decades.

> >If you SWR reading has changed, it must be because some other
> >parameter has changed (e.g. coax loss). It is that simple.
> >You've never been able to give any good explanation or reference
> >that suggests otherwise.
>
> I have indeed, you just refuse to accept it.

I refuse to accept unsubstantiated claims. It is that simple.
The threshold for acceptance is much, much lower for you than it
is for me. The exception is when it comes to reference material --
only then do you refuse to accept it.

We've seen it over and over again on this newsgroup. Self-proclaimed
experts throw out the theory in favor of their own interpretations.
If I discovered an observation that appeared to disagree with the
theory, I would have to study it to reconcile the difference. There

alway is a reason and it is always completely compatible with the theory. That's the difference between you and me.

That's cool. I looked at the spec's for the Ten-Tec again and noticed it has transverter ports. Now that's something I wish my 847 had. That will come in real handy when you want to experiment with other bands. Let me know when you get the new rig. I'm curios what your impression is about the performance.

Absolutely right, Dave. The Channelmaster is not a neutral product
that can be used for either legal or illegal purposes. It is

specifically designed to make CB radios operate illegally, i.e. go out of band and in between channels. Read the advertisement over. I can't figure out why Dick didn't see this.

Guns have saved millions more children. You bleeding hearts will never learn
from history- and it will repeat itself someday in this country if you
succeed
in taking our firearms away. Just look a history and wake up. In 1928 the
Weimar administration in Germany banned guns- anyone remember what Hitler
did a
few years later??? In 1911 guns were banned in Turkey- by 1917 1 million
Armenians were murdered. In 1929 guns were banned in Russia- over the next
30
years an estimated 1 million anti communists were extinguished by their
so-called humanisitic-socialist government. In 1970 Guns were banned in
Uganda.... By 1971 300,000 Christians were murdered- just some good old
ethnic
cleansing, hmmm Bosnia- sound familiar??? This has also happened in China,
Guatamala, and Cambodia- all during the 20th century. So why dont you
bleeding
heart hippies open up your history books and see how history has proven that
banning guns actually gets more children killed- WAKE UP!

Why in Gods name would a post that asked someone what frequency an unknown transmitter was tested on make you want "dig deeper"? Does my opinion threaten you THAT much that you would seek personal information about me? Or maybe you LIKE me and want to get close to me? Sorry, you may be gay, but I'm not.

Wrong. The device can be used to make a CB radio receive more
than the normal 40 channels. This alone is not illegal. Therefore this
device CAN be used legally.

Hello Tristar:

On boats it is common practice to mount the 1/4 wavelength whip in the center of the bow area, or off to the side of the wheel house of simi tower structure. The 9 foot lengths of copper wire are connected to the shield of the coax at the antenna connection, and roughed away from the antenna giving the the antenna the reflection surface it needs to work. It doesn't have to be perfectly straight, but needs to be there. These 3 or 4 ground plane wires can be mounted just underneath the bow, not on top. The Fiberglass material is invisible to the energy at these frequencies.

I have seen campers and motor homes do the same thing, running 3 or 4 wires as ground plane radials, inside the vehicle just underneath the roof, or run right on top of the roof, since nobody will see the wires on top of these vehicles, they can have a resin or just RTV hold them in place.

Not. You can modify your radio all day long. It only becomes illegal
if you are a Cber. A CBer only becomes a CBer upon transmitting.
If you are not a CBer you then part 95 rules do not apply to you.

The same can be said about using amateur equipment. A non amateur
can use it and modify it legally just as a non CBer can modify a CB
radio. As long as no transmissions are being made then you can do
whatever you want. Part 95 rules apply to using a CB radio. Using a
CB radio is defined as transmitting, not listening in.

Greetings,

Looking for sites/advice to setup the following:

Need a setup that I can move from a van on to a motorcycle. I'm sure it's
been done many times before but web searches are not turning up sites
that help out much but tend to give too much information about specs or
prices and not enough about how to set it up and what gear would be best
suited for this.

I don't want to re-invent the wheel and I trust people who know far more
than I'll ever want to know about CBs have done this already. Just want
to tap the community for info.

Many thanks in advance for any help and all flamers and trolls will be kill
filed

>wasn't a mistake.

No, I didn't pull my sig by mistake. I pulled it because I didn't want
any disinterested third-party to confuse the quotes. But you seem to
be under the impression that I give a shit what you do. Acually [sic]
I enjoyed seeing my quote in your sig, and it was even better knowing
that your resentfulness couldn't allow you to understand it's meaning.

> We both been here long enough to know the score and
>all disagreements (I would like to think we are beyond the "fighting"
>stage) should be handled accordingly, with no personal BS involved.

Again you are way off base, twist. You have no foundation or proof for
any of your accusations, and when confronted with proof that disputes
your claims, you counter with nothing less than your "personal BS". If
you really want to stop all this bickering, all you have to do is go

through all your posts and admit where you were wrong. Point by point. And if you don't want the same shit to happen again, keep your BS to yourself.

I'm kidding myself, because I know that won't happen. Your ego will never allow you to admit a mistake.

> You
>have some good advice to add here and there,

Damn straight.

> but I'm not going to
>lecture you on the disadvantages of your personal attacks. You know what
>you are doing.

YOU lecture ME on personal attacks? Your delusions never stop, and your olive branch is full of thorns.

Sorry, twist, but you are just too much fun. Your posts are full of garbage, lies, hallucinations, groundless accusations, and pointless diatribes. The best part about you being here is that instead of dropping the subject when faced with the truth, you would rather dig a deeper hole. Your hole has already caved in on you countless times, but you are too arrogant to admit it. And it's even funnier to know that your BS bothers me -- that's just another one of your projections.

But here's the best part: You have wasted the better part of a YEAR with all your rants, and it will take you at least that long to regain any kind of credibility in this ng, even with the illegals. Everyone now knows you are a cheap bullshit artist, and that you will cover your lies with layers upon layers of more bullshit. Your only friends here are moped and sharkie, and only because they dug their own holes and don't want to be alone. I am awestruck in disbelief every time you post another one of your lies, but then I burst out in a fit of laughter when I think about all the humiliation you must be blocking behind your enormous ego. You are a pathological liar, and you prove it almost daily for our amusement.

So the way I see it, you have three choices:

1. Continue to amuse myself and others;
2. Be a man and admit your faults; or
3. Leave to avoid further humiliation.

My money is on choice #1....

That's odd, I don't recall being investigated, I have been selling
this software for a while. It is not illegal to receive the
frequencies covered by using this software, it is not illegal for a
licensed technician to make the modification to the radio, it is
not illegal to posses a radio capable of transmitting on these
frequencies. If you choose to transmit on these frequencies then
you face the legal consequences of your actions. As stated in the EULA
enclosed with the software you are responsible for
complying with all local, state and federal laws, what you do with it
is your business. Look at the expander kits sold by CBC
International www.cbcintl.com/expander240.htm, this mod provides
similar frequency coverage but is a hardware mod vs. a
software mod, they have been selling this kit for years.

>
>On the contrary, you did an experiment and jumped to a conclusion.
>You obtained two different readings and concluded that the SWR
>meter is being fooled. You haven't considered the possibility
>that other parameters (e.g. line loss, common mode currents,
>tolerances, etc.) have indeed changed the SWR.

If the forward power doesn't change, and the reflected power doesn't change, then the SWR doesn't change, does it? Now if the meter reads a different SWR with different lengths of coax but the SWR doesn't change, then the meter must not be reading the correct SWR, don't you think? Wouldn't that be synonymous with 'fooling the meter'? Duh....

In consideration of these other parameters, please explain how three extra feet of coax is going to affect line loss, common mode currents, tolerances, etc. to the point that it affects both true and measured SWR? Sorry, CLP, these differences are slight at best, and are probably not even measurable for the lengths discussed here. Try again.

>That is the problem with relying on an individual observation and
>allowing it to supersede the theory which is, in fact, based on
>countless observations made by many experts over a period of decades.

Again you are forgetting the most important issue: the -observed- SWR.

>> >If you SWR reading has changed, it must be because some other
>> >parameter has changed (e.g. coax loss). It is that simple.
>> >You've never been able to give any good explanation or reference

>
>I refuse to accept unsubstantiated claims. It is that simple.

Then do the experiment. It's even simpler.

>The threshold for acceptance is much, much lower for you than it
>is for me. The exception is when it comes to reference material --
>only then do you refuse to accept it.

I remember someone talking about 'real world' experience, so I posted the experiment. Months ago I provided more theory and references than you could handle. If that isn't enough, then do the experiment yourself.

>We've seen it over and over again on this newsgroup. Self-proclaimed

Fascinating. Often, people who claim to be 'in reality' really aren't, just as people who don't have a sense of humor think that they do anyway. In other words, you don't have a baseline to determine your own sanity. It is the rare person with the intelligence to realize that they have a problem. Perhaps when people criticize you for worrying about the black helicopters, you should consider the multiple sources of the comments.

If you want something pretty simple and quick to slap on there, I have had good luck with Solarcon's GroundZero antenna. You can get them for as little as about $23.

Here's a link to a picture:

http://www.radioway.com/gndzero.jpg

Hmmm....ok..I see you pulled my tag from your sig.,,,,,I can be human
when not messed with too, Frank. I'll pull mine as well, assuming yours
wasn't a mistake.

No, I didn't pull my sig by mistake. I pulled it because I didn't want
any disinterested third-party to confuse the quotes. But you seem to be
under the impression that I give a shit what you do.

"Where did you draw that incorrect inference. it is much simpler than
that. I thought you were minding your business for awhile and came to
your senses and stopped your harassment. Guess I was in error."

Acually [sic] I enjoyed seeing my quote in your sig,

"Cool, I'll put it back."

and it was even better knowing that your resentfulness couldn't allow you to understand it's meaning.

"It means just what I meant it to. If you have your own mental deficiency that interprets it differently for you, more power to ya'."

We both been here long enough to know the score and all disagreements (I would like to think we are beyond the "fighting" stage) should be handled accordingly, with no personal BS involved.

Again you are way off base, twist.

"Yea, I should have known. Being polie to you never got anyone here anywhere, except accused of homosexuality by you."

You have no foundation or proof for any of your accusations, and when confronted with proof that disputes your claims, you counter with nothing less than your "personal BS". If you really want to stop all this bickering,

"I don't really give a damn Sparky. You think your own way, leland deludes his thinking in another, meanwhile I am on my merry little way and all you can do is beg daily for me to let you be a part of it along with leland."

all you have to do is go through all your posts and admit where you were wrong. Point by point. And if you don't want the same shit to happen again, keep your BS to yourself.
I'm kidding myself, because I know that won't happen. Your ego will never allow you to admit a mistake.
You
have some good advice to add here and there,
Damn straight.

"But not often."

but I'm not going to
lecture you on the disadvantages of your personal attacks. You know what you are doing.
YOU lecture ME on personal attacks? Your delusions never stop, and your olive branch is full of thorns.

"Wrong.It was made in good will, but it served to expose you and Leland as a couple made for each other."

Sorry, twist,

"Stand up, Sparky. That really isn't necessary."

but you are just too much fun. Your posts are full of garbage, lies, hallucinations, groundless accusations, and pointless diatribes. The best part about you being here is that instead of dropping the subject when faced with the truth, you would rather dig a deeper hole. Your hole has already caved in on you countless times, but you are too arrogant to

admit it. And it's even funnier to know that your BS bothers me

"At least you admit it. Of course I bother you. I bother you and Leland simply because you can not play and frolic like you used to andnothing you can ever do can get my attention unless I deem it so. Leland has already"let his emotions get the best of him a few times, most recently as of today by threatening the group with spam again "IF twisted" didn't do what he says. I don;t have to prove a damn thing, he did it for me. Or is it that he and Doug both can't stand me so much that they BOTH stoop to threatening the group if "twisted doesn't go away? "LMAO! Again."

-- that's just another one of your projections.

"No. He really did threaten the group. Look, it's at the bottom of my sig."

But here's the best part: You have wasted
the better part of a YEAR with all your rants,

"WASTED? ROFLMAO! Tell me how poor my writing is as I sit here and reply as I choose, at my leisure, and my mere WORDS can send Leland and Dogie into froths so full of venom and spite and uncontrolled rage that they threaten the group to satisfy a personal shortcoming and vendetta. Well, not so much Dogie lately, but that is a pitiful human that would do that. Extremely selfish."

tand it will take you at least that long to regain any kind of credibility in this ng, even with the illegals.

"I'm not here to prove my credibility to anyone. What makes it hysterical, I can accuse you of assassinating Martin Luther King and you would rant and rave for days about proof. Hell, I can throw out anything now and you stooges are so worried that what I say is going to be taken as Gospel by someone that Y'all are besides yourselves."

Your defi Everyone now knows you are a cheap bullshit artist, and that you will cover your lies with layers upon layers of more bullshit. Your only friends here are moped and sharkie, and only because they dug their own holes and don't want to be alone. I am awestruck in disbelief every time you post another one of your lies, but then I burst out in a fit of laughter

"I am glad to be a ray of sunshine and bring a smile to your otherwise mundane existence."

when I think about all the humiliation you must be

"You actually think about that? Geeez!"

blocking behind your enormous ego. You are a pathological liar, and you prove it almost daily for our amusement.

"No. I just call 'em as I see 'em. And that upsets you for some reason, extremely, but not as much as it does Leland."

So the way I see it, you have three choices:
1. Continue to amuse myself and others;
2. Be a man and admit your faults; or
3. Leave to avoid further humiliation.
My money is on choice #1....

"Wow! That wouldn't be because you left out the most obvious choices, such as 1) Continue to watch your stooge party threaten and assail this group
2) Laugh at you and Leland's repeated attempts at silencing me through group threats, as if that would somehow get someone else to lean on me from the group. Try again in six months.No one cares what you do. It is your ego that has been checked, by me, long ago. What has resulted from the stooge party is bycatch fallout."
3) Ask that since you have failed to silence me or intimidate me or humiliate me or whatever it is you call it today that you are doing every time, and have failed to start your own group like you said you would when I was hammering your insolence and ignorance last time, how does it feel to fail at everything you do? What you mistake for humiliation is my days shits and giggles. Nothing has changed. You guys still make me laugh. When I stop enjoying this place, I will no longer check in."

□□□□□□□"But, it did stop the flooding. That can't be denied".....in response to KC8LDO's assertion that reporting a porn posting flooder in rec.radio.cb did no good.

....and the parents of these children, who placed them in harm's way, bear no responsibility for their injury? It's very easy for the paranoid to blame the faceless 'government' for those things which they disdain. The adults in these two situations knew full well the potential outcome by flailing their weapons and chose to risk the lives of the innocent. Nobody is pleased with the outcome vis-a-vis the children. The adults, on the other hand, pretty much got what they had expected. Unfortunately the 'government' was sucker punched into turning them into martyrs for the mindless unthinking. You conveniently overlooked those named and unnamed who also killed the innocents in Oklahoma City. It cuts both ways, but you seem not to understand that. Pity.

I am perfectly aware of what is going on and if I gave a shit could do it myself.

When it is all said and done, what we have here is a CB radio with an umbilical cable to a compooter rather than a set of switches, assuming of course that both the rig and compooter survive the surgery. Yes, certification is voided and yes operation is illegal with both systems although contrary to Dave's categorical imperative there is nothing illegal about supplying parts and know-how; 'anything' is a trifle broad. 'Should' is a theological concept.

The issue here is not whether it is a crime but where the crime lies. To me it was committed when the decision was made to extend the range of the PLL although a better case can me made that the crime was committed when it became possible for the village idiot to do the mod. So the choice here is not whether rigs are going to be extended but the methodology to be used and the results to be obtained. The rumblings of one's stomach are not the immutable laws of the Universe. So I am not a moral absolutist, sue me.

When the dust clears, we have a rig that is desk bound and functions no differently from one with holes and switches except that, glorioski, we have the world's most expensive freq counter and not a great one because the read-out is what we intend not what we got. Even that is an improvement over 'Channel 19 two up.'

Does not make the rig work any better or worse in the outbands -- it tunes or it doesn't. Makes it impossible to take mobile. Just where is this in its outcome any worse than any other approach, any more illegal, or any more subject to 'investigation' than Gus down at the truck stop? And outcomes, House Republicans aside, are what regulation and enforcement is about. Absolutism produces bathtub gin, methamphetamine, and a lot of dead women; it threatens now to bring valid medical research to a stop. No Thanks.

The technology is interesting because that is the way things are going anyway. This particular use is pretty trivial to all but those who react like Dracula to a garlicwood cross to a breach of sacred scripture.

Hello Frank: Must have been left along in the closet a lot as a child a lot, ah?

Wonder why your so snotty and unfriendly? You certainly post enough insincere crap.

Well, if you want to consider me your good buddy then
fine...................But you really should go back and read Part 95
rules. It clearly states that:
****
The CB radio service is a private TWO WAY communication system.

It also states that you must comply with Part 95 rules when operating
a station in the CB radio service.
**********************************&

A radio sitting on the shelf at your local Radio Shack is not being
used in the "CB radio service" even if it's turned on. Radio Shack
would never have to comply with inspection of their station within
the Part 95 rules The radio is not being operated in this fashion.
Operation of a CB radio as far as the FCC and Part 95 goes only takes
place once the radio is used as a TWO WAY communication
system. You must transmit or there must be some evidence of
transmission before the FCC can ever consider using a Part 95 rule.

Therefore a device that modifies a CB radio for more frequencies CAN
be sold legally.

And the word "USE" in the statement USE of a modified radio only
pertains to transmitting usage.

Some understand what's legal and what's not. Some don't.........

Just ignore the self appointed legal police. They love playing safety
boy. It's totally irrelevant if they are right or not.

Take an old AC cord and fashion it so that it will fit the power hookup on the radio. Don't worry about which lead is positive or negative. Plug in to any household outlet, tune to channel 19, and then continuously start hollering into the mic 'How bout it skip land'.

Good luck! We all anxiously await your results.

well first you probably need the mic plugged in - looks like the connector
is gone on yours - then the next trick is to put it on AM and then Channel
6 - you should be able to here all kinds of chatter goin on during the day.

If the mic thing fails then I would watch the meter on it and try another
radio next to it to see if it goes anywhere when you key the other radio

5085. Re: wanted a 32 pill box

Newsgroup: rec.radio.cb
Date: 2001-07-19 06:21:41 UTC
From: n7kn <n7kn@hotmail.com>
Message-ID: <j2v57.6122$b3.2040449@feed.centurytel.net>
Source record: 89122

Here's my information:
The requirements of an solid state amp beyond the 300 watt level is an expensive propositon.
One must consider the heat dissipation (worst case; 50 degrees C), the power requirements (1KW may require 40A @ 50V, this means an expensive power supply). Electical abuse consideration also must be considered. A brief spike may destroy very expensive RF transistors while having little effect on a tube. At 50V, impedeance matching is rather simple. At 13.8, this becomes a little more challenging.
Beyond a few hundred watts one should consider a valve design (vacuum tube). Tubes can run between 100 and 150 degrees C or more and be cooled by a simple fan. Power requirements may be difficult in a mobile application for tube gear, but every home carries plenty of power for tube amps.
Running a 32 pill box out of your mobile might sound like an exciting idea, but if you're not set up for it yet; you have a long row to hoe.
I'm sure others can add to the drawbacks and advantages (and I'm sure they will) of giant solid state boxes.
I think a 32 pill linear lands in the "more dollars than sense" dept.

Anybody got any neat newer style military radios they want to sell? I am looking for things newer than Viet Nam era, not the older stuff like PRC-77s.
Thanks for looking.

Yep. Unfortunately, it is being taken to extremes - which makes the signal
worse, not better.

Well, let's see....

A person, using a totally anonymous addy, with "X-No-Archive: yes" in the header, crossposts a question to five different newsgroups about how to test CB radio he has for sale, and does so -after- he puts it up on ebay, while posting the link, and asking everyone to take a look at the pic. Sounds like thinly disguised spam to me. Hey, I don't care if someone posts their auctions to any newsgroup as appropriate. But to try and camouflage it inside a simple tech question is, IMO, lame.

Now, what happened to -you- in the past month that you now feel the need to scrutinize my posts? Is your life so boring that you are looking to start an argument with me?

It's a tradeoff. The handheld CBs will give you a bit better range,
but they are usually larger and use up the batteries a lot faster.

I've actually heard of a CB'er doing this before...

I've also heard of a CB'er hooking up his CB to the cable TV cable
because he thought that he could get really good range if he hooked
into the tall cable TV tower just outside town. Guess he didn't
realize there would be a few pieces of equipment between the TV & the
tower.

'Anything' is the FCC's definition. They're pretty clear on what can and
cannot be done to a Part 95 type accepted CB service radio.

So your contention is that since we already have PLL hacks out there, what would be the harm of "classing it up" a bit by upping the technology to include computer control.

Well, I could say the same thing about the means of comitting any crime. "Since there are already people shooting other people, what harm would it be to use homemade bombs".

You then compare this to prohibition, abortion, and other "crimes" where people blatently ignored the law, as some sort of justification. All that says is that people have little respect for the law. Which tells me that we're slipping backward toward barbarism and anarchy, if we can't just accept that there are certain things we can't do, and abide by it. If we feel strongly enough that a particular law is unjust, then we gather support from other people (Remember is is still majority rules in most cases), and lobby to change the rule. But you don't just ignore it, and then cry foul when caught.

> The technology is interesting because that is the way things are going
> anyway. This particular use is pretty trivial to all but those who react
> like Dracula to a garlicwood cross to a breach of sacred scripture.

It's nothing new. I wrote a basic program in 1982 on a Commodore 64, that interfaced it to a Realistic TRC 459 (The computer controlled base). I wrote it because a local dirt bag challenged me that I couldn't be on the radio 24/7 to "police" his activities. So I wrote "Dirtball Busters". It scanned the radio through the frequencies, until it found his signal (He was very close so I could use the full squelch trigger). It then keyed the transmitter and gave a 30 second synthesized voice monolog, laced with witty comments, designed basically to plug his ears. It would then resume scanning. After about 2 days of this, he cried "uncle".

I could have used this interface for many other things, but while it was "neat" it didn't do anything special, that made me want to pursue it much further. I did, however, build a much smaller device that interfaced to a PLL02A radio, that programmed the chip's /N count, and displayed the frequency on a nice little 5 digit display (Sort of like a digi-scan, only I built mine in 1980). At least I could use it mobile.

I can understand the urge, for techie types, to experiment on their radios. It's fun, and challenging. That's what drove me, before finally getting my ham license. But at some point, as much fun as it might be, we have to deal with the legal issues. As a snot-nosed, down-with-authority, 20-something, in the 1980's, I didn't care. But as we mature, and get a different perspective on reality, my values

changed. For some, it just takes a little longer. Those that never "get it" eventually become subjects of the criminal justice system

Please don't start the semantics argument again. We all know that you
can do whatever you want if you ONLY receive. But we also are not so
naive to believe that that's what the majority of the users of this
product intend.

My actual first box had no modem at all and I still own her. Sitting in a box at my mothers home in my "room" which has been taking over by her collecting of bears etc. Nec 9000 4.77mhz complete with a tape backup. Consisting of a tape recorder plugged into it which was so dam slow. Basic on a rom. 1985ish I think or somewhere there abouts. My parents had won it and they gave it to me. Which lighted a flame under me. I was only about 11 or 12 at the time so I had no clue what it could do. Well we all know it didnot do much at all. So considering I have only been involved with boxen for the past 15 years I have seen so much change. One of the biggest changes that pops into my head is the " Computer Shopper" magazine. For those f you that know it would list thousands of phone numbers for
BBSes. Located all over the country. This fueled my wanting to know of the phone system and how it all worked including " Lucent " and other types of phone swiches.
"Waves at dennis ". I am sure he would be suprised that I know the innerworkings of a 6ESS,5ESS etc. My introduction into the BBS world with the use of my handy acoustic coupler made the worlld open up. My Uncle being a very large figure in Zenith Data Systems in Chicago gave me most of my equipment for free. I would get
the equipment which had been shown off to people. LIke display models. So Like 10,000 dollar 386 33mhz 8 megs of ram laptops also equiped with an inernal 2400bps modem . The laptop still carrying its prototype idenification numbers .HEH.. Another piece of history I still own. How about a 286 dual 3 1/2 I recall it being 16mhz . It is another laptop I own which jesus it weighs about 40lbs I guess hehe. Computer shopper has dropped from the amazing 3 inch thick book that would keep me reading for days and days nonstop to adds and crap. Which I canceled my subscription years ago. Hot Rod magazine mm those were the days. The god of mags when I was 17 and bought my first car. 1966 or 67chevelle which was a junker and so long ago the exact date of year passes my mind right now. 396, 2 speed powerglide with semi good body. Huge backseat uNf. pulled that 396 and put in a small block. 350 .. bored .30 and usual mod changes. DUmping all my cash into the motor to get a 5 angle vavle job on my heads mm those were the days. We tore out that 2 speed powerglide thru in a 4 speed munsie whew brings back memories. Nothing like a 383 cu inch small block with tons of torque and a 4 speed behind it to make you feel like you own a pair. Later on a Dana 60 Rearend how later I do not recall never the less it was needed. Huge carb later replaced by a 1050 cfm or somewhere there abouts type on top of one of the best intake manifolds I have ever used. IT ran so wll Condensation would form on it. The name of it is out of my reach but never the less someone may know what I am talking about. No it was not any eldbrock crap. All I can remember is that is was a high rise intake something II I am sure I will remember just maybe not before I finish this post. Have I liked all the changes on the net no. Considering a vast majority of the net more than 40% is porn it all seems a waste of resources. I am just a geek though so it is

possible that I reject "Atm" high cpu overhead and cost ..for more cost effeciant gigabit ethernet for internal networks etc. Yes this is a ramble HEH. When I post I post all my thoughts at a time. No time to go thru everyones post. Train I still use Lynx hehe. Though my primary os is FreeBSD on x86 boxen--NetBSD on my sparc Ultra 2. I just can not stand Solaris unless it is just to do a function then its 99.9% uptime grants it specific use.To another post about my time schedule or my introduction to this group was more than 5 years defantly. I sat around for a few years then oneday I replyed to a post and off I went from there. I also have no pets on this newsgroup. Some point in my life at that time I gathered ideas about people .
My bump it list was a joke at first. To mess with people who were not on it.The whole Blackstone amp thing pissed off mucho builders and I was only being honest. Honesty showed its face in DC sky from which I never have to say again " I bet you they get cut off ". Now for those of you that may bash me and say" O my god that is illegal". No need to tell me I already know. Flashing the black and white at me is not impressive. You can read FCC specific regulations for CB which ok that is fine but lets see you expand your mind to other parts of FCC regulations like I do. "Drools" over the fact 54 -60ghz is unregulated now. uNf..

Sparky quipped:
Well, let's see....
A person, using a totally anonymous addy, with "X-No-Archive: yes" in the header, crossposts a question to five different newsgroups about how to test CB radio he has for sale, and does so -after- he puts it up on ebay, while posting the link, and asking everyone to take a look at the pic. Sounds like thinly disguised spam to me. Hey, I don't care if someone posts their auctions to any newsgroup as appropriate. But to try and camouflage it inside a simple tech question is, IMO, lame.

"And this bothers you why? Better yet, tell us how it effects (mmph) you at work."

Now, what happened to -you- in the past month that you now feel the need to scrutinize my posts?

"It's your attitude, Sparky. Just another in a long line of things you have a problem with, criticism in any way, hahahah! What makes you think you deserve an answer? You have attempted to impose yourself into others personal lives simply because you have none of your own."

Is your life so boring that you are looking to start an argument with me?

"Yours sure is. Why, your pal artificial Aaron even alluded sexuality is compromised and related to ones searching for personal information on another that has nothing to do with cb. How many times have you done this, Sparky?"

My best guess is you're getting coupling in to the ground around the antenna. The coupling changes when the antenna is mounted up higher so the match changes. If you must adjust the antenna on the ground try holding the antenna so that the antenna is in a vertical position with the forward end pointing straight up in to the sky, and the back end a few feet off the ground. This should yield better results for starters.

As I recall everybody just rolled over laughing out loud when you broke the news to the group that you assumed Doug sent you a dead fish, and some dirty underwear, on two separate occasions by mail.

WOW you guys really impress me on the way a person who has no radio experience askes a simple question on how he should test a radio/radio's to ensure that they work before some one buys them and comes back stating they don't.... now he probably does not have any radio experience like you me or the guy down the road.... why not give it a break guys... if ya wanna use yer smart comments.. y not keep them on the air... lets keep the NG's to what they are for.

and to answer the guys question i would first start off on testing it on am.. if you have 2 radios turn them both on to the same channel and connecting a dummyload to each radio speak onto 1 radio and listen to see if you hear your audio coming from the other radio.. then do the same thing on the other radio... and i would do the same thing for LSB and USB
that is the simplest that i would do it
good luck

>More like a warning I would say.

>"Why would YOU say that?"

You two had such a nice love afair going with the daily exchange of messages expressing your "feelings" for each other. If he gets wind of the fact that you're "available" again he just may start courting you by posting his love letters to you again.

>"Wow! Big mystery."

To you it always was a mystery, and still is, even after your failed attempts at header reading.

>"HAHAH! Anger nails you each time, Leland. Why would (ahem) Doug care if
>I was pointing out your BS?

He didn't because it made a hypocrite out of those doing the finger pointing like you Twisted. What you did fit his agenda. On one hand prattling on about ISP terms of service, pointing out how he was breaking the rules, then on the other hand bashing Part 95 rules.

> As I said once before, you should be ashamed
>of yourself,

Not.

>and the odd thing is, you think the group not capable of
>seeing through this charade of yours that "Doug will do this if Twisted
>doesn't leave me alone". Haha! You are a riot."

It happened once, that is a fact, so it can happen again. You provide enough incentive and somebody, if not Doug, will take you up on it.

Hi all-

Another great Radio from my Collection for auction,
is the PACE CB-144, 37 MHz Master OSC, and
the 10MHz RX OSC and 10MHz TX OSC crystals.
Great for 10 Meter Conversion! Plug-IN 6-4-4 mixing
scheme.....

Your vision is too narrow. He has been proven guilty of everything he
accuses others of doing, so he projects his offenses on others to
offset his own malicious behavior. Except he doesn't have any proof or
substantial evidence, only his warped perceptions that are fed by his
paranoid delusions. Did you forget his catch-all phrase that confirms
the guilt of all his oppressors?

sparky@cet.com (Frank Gilliland) wrote:

> If the forward power doesn't change, and the reflected power doesn't
> change, then the SWR doesn't change, does it?

That is correct.

> Now if the meter reads a
> different SWR with different lengths of coax but the SWR doesn't
> change, then the meter must not be reading the correct SWR, don't you
> think? Wouldn't that be synonymous with 'fooling the meter'? Duh....

You are ASSUMING that the SWR has not changed. Duh...
The SWR is found by measuring the forward power and the
reflected power. If, as you say, these have not changed, then
the meter reading wouldn't change, would it?

This goes back to my point that you are jumping to conclusions
without necessary and sufficient substantiation. If a power
reading changes (forward and/or reflected), why would you assume
that the meter is being fooled? How can you conclude that the
power had not indeed changed?

> In consideration of these other parameters, please explain how three
> extra feet of coax is going to affect line loss, common mode currents,
> tolerances, etc. to the point that it affects both true and measured
> SWR? Sorry, CLP, these differences are slight at best, and are
> probably not even measurable for the lengths discussed here. Try
> again.

Not true. When you have common mode currents, changing the length
of the transmission line is like changing the length of one of the
active elements of your antenna. It can be significant.
Furthermore, it is a known fact that PL-259 connectors (the standard
for CB) do not have a characteristic impedance of 50 ohms. Introducing
a 3 foot jumper with these connectors introduces minor mismatches
along the line.
Even more, if your transmission line does not truly have a
characteristic impedance of 50 ohms (due to tolerances [or if you
bought it at Radio Shack]), it will change the match as the length
is changed.

So, let's get to your "differences are slight at best" claim.
I've given you three real, non-trivial reasons for the SWR reading
to change. You have provided zero reasons why an SWR meter can
be fooled yet still conclude that it is fooled.

[snip]
> I remember someone talking about 'real world' experience, so I posted
> the experiment. Months ago I provided more theory and references than
> you could handle. If that isn't enough, then do the experiment

> Then do the experiment, take your measurements, collect your data, and
> post your theory. If you don't want to do all that, or if you can't
> even do that simple experiment, then don't criticize me or my
> references.

Well, how can I not criticize your reference when it doesn't state
what you claim it states? And, for the reasons I have outlined above,
your experiment does not support your conclusion.

I like Twisted. He's just like playing with a dog. You throw out a post, and
like a good puppy he goes and fetches it, i.e. feels compelled to respond
even if it means lying. Did you think I take anything he says serious?
Nobody else does either. It's real funny that he has resorted to plowing
through tons of old posts of mine, and I'm sure he has spent hours doing so
because there are a lot of them, looking for something he can twist around
in to another lie. At least the time he spends looking up the old posts
keeps him off the streets making them safer for the kids in his neighbor
hood.

If the voltage is below 13.8 VDC after rectification and filtering then he would need a "Boost regulator", if it is above then he would need a "Buck regulator". These are completely different circuit types. He did say that the voltage swings anywhere from 6 VAC to 16 VAC depending on engine speed. That makes using a regulator type a bit more complicated. There is such a thing as a "Buck - Boost Regulator" but the cost of building one most likely would exceed the cost of the other simpler solutions.

More like a warning I would say.

"Why would YOU say that?"

You two had such a nice love afair going with the daily exchange of
messages expressing your "feelings" for each other. If he gets wind of
the fact that you're "available" again

"Again? I never left, so that nullifies your attempted backslide,
INSTANTLY."

he just may start courting you by posting his love letters to you again.

"Wow! Big mystery."

To you it always was a mystery, and still is, even after your failed
attempts at header reading.

"Mine? Ha! I never claimed to be the literate computer grad. I don't
claim superiority in header reading, YOU do, but you still misread them
, deliberately in some cases. What about yours in the hammie forum?
Angrily attacking another ham, with a totally different subject when you
were called on your forging. Yes, Leland, you lie, you lie well, but you
lie like hell. That act alone made you either A) An idiot for not being
able to tell a forge from webtv,
B) a liar
C) both
My guess is "C" (nod to Sparky).

"HAHAH! Anger nails you each time, Leland. Why would (ahem) Doug care if
I was pointing out your BS?

He didn't because it made a hypocrite out of those doing the finger
pointing like you Twisted. What you did fit his agenda.

"You have stated and reiterated in the past you you know nothing about
Dougie nor his agenda, but here you are attempting to give us a full
psychological breakdown on him and telling us is motives. Hahahah! You
really shouldn't post out of anger Leland. "

On one hand prattling on about ISP terms of service, pointing out how he
was breaking the rules, then on the other hand bashing Part 95 rules.

As I said once before, you should be ashamed of yourself,

Not.

"Apparently not capable."

and the odd thing is, you think the group not capable of seeing through this charade of yours that "Doug will do this if Twisted doesn't leave me alone". Haha! You are a riot."
It happened once, that is a fact, so it can happen again. You provide enough incentive and somebody, if not Doug, will take you up on it.

"Hahahah! Only you and the other stooges have a problem. You made a stupid threat out of anger and opened your mouth when you shouldn't have, Leland, You have showed your color and it's yellow. Once again, you screw up. You have answered many questions of many hammies and rogue ops alike in the past few days. The complete disdain you show for the group by threatening to spam it when you don't get your way (read: inability to control speech = Leland's temper tantrum) has isolated you even further."--

"Um, wait a second. I NEVER claimed to be a writer until you guys found an article I wrote under the twisted moniker and posted it here. Once again, you are wrong, and a liar as usual."

==========

From: twistedhed@webtv.net (twistedhed@webtv.net)
Subject: Re: FCC's Riley is coming. Oh Yea
Newsgroups: rec.radio.cb
Date: 1999/11/08

I will avoid personal attacks like the ones you have posted calling some one "son". This is a direct conflict with what these postings are SUPPOSED to be about. I will abide with the issue at hand.
I find myself quite amused that you take what you hear and read quite literally. I have been investigating the Feds. underhanded dealings concerning global communications for almost a year, as part of my studies devoted to journalism.
Have you ever heard of spin? Propaganda? The FCC is inundated with such high-tech crimes such as cellular cloning and computer related crimes. What you are hearing and reading is complete hyberbole and spin. Simply put, this is another political maneuver to get the cash flowig. It has absolutely nothing to do with enforcement of radio. I now what he has said he was going to do. I know he is going to streamline, reorganize, etc. Pure hype. This is akin to a politician telling his costituents what they want to hear to pacify their whetted appetites to appease the here-and-now. You are welcome to believe whatever you like. Take it from somene who has been denied countless interviews, granted a few, and no-commented to- death when it comes to who really is in charge at the FCC. If you believe it's saviour time, you have one hell of a wake-up call pending you my friend. I can supply you with hundreds of hours of interviews from the NSAs covert Echelon global spy communications system(monitors ALL modes of communication for "key" words) clear down to the FCCs local, regional and National Directors comments. Who you think is in charge isn't, and what you think will take place, won't. The resources simply are not there and congress' pending vote on the current bill is unlikely to gather the muster to pass. Even if it does, the allocation of funds is the equivalent of just a few dozen or so added employees. No, your messiah is a false god. What will likely take place

SOMETIME in the future, is that local municipalities will be given the jurisdiction of enforcing their own areas. But this is old news. Like I said, you are free to believe what you like and no one will think ill of you for it. But these are the facts. It is my profession and my passion to educate the public.(I am a writer) Especially when it comes to Big Brothers Bull. There are many avenues for you to obtain the true information on what is truly taking place. Unfortunately, the gentleman who now claims he holds the reigns at the FCC has not the power or the status that you so graciously allow him. But with a few more posts like yours, I am sure that "Camelot" is just over that next hill.....

>I've given you three real, non-trivial reasons for the SWR reading
>to change. You have provided zero reasons why an SWR meter can
>be fooled yet still conclude that it is fooled.

Since you are so persistant with your claim that SWR changes
significantly because of common-mode currents, and the tolerances and
mismatches from the additional components, you should probably prove
it. Post your references showing the typical impedance tolerance of
consumer-grade coax, the characteristic impedances of PL-259/SO-239
pairs, and a published definition (try library of Congress this time,
huh?) of 'common-mode currents'. Then show the maximum possible
deviation in the SWR when adding 3 extra feet of coax and a single
PL-259/SO-239 pair with the maximum tolerances for consumer-grade
components. AND THEN do the experiment and compare the results.

You can prove your point, can't you? Or are you just another
twistedhed?

>[snip]
>> I remember someone talking about 'real world' experience, so I posted
>> the experiment. Months ago I provided more theory and references than
>> you could handle. If that isn't enough, then do the experiment

>
>I remember those "references." When I obtained a copy, they said
>nothing about what you claimed they said. You lied.

If you had the whole book, as you claimed you did, you would have been
able to answer my simple test -- to quote one word from a given page.
Either that was too difficult or you just had copies of a couple
pages. Do you still have the book? The whole book? If you do, we can
clear this up real quick.

>> >We've seen it over and over again on this newsgroup. Self-proclaimed
>> >experts throw out the theory in favor of their own interpretations.

>> post your theory. If you don't want to do all that, or if you can't

>> even do that simple experiment, then don't criticize me or my
>> references.
>
>Well, how can I not criticize your reference when it doesn't state
>what you claim it states? And, for the reasons I have outlined above,
>your experiment does not support your conclusion.

If you want to argue, go somewhere else. If you don't want to do such a simple experiment that any bonehead can do (and some have), fine, then drop the subject. If you want to post your own explanation for the observed differences, go for it. These facts remain:

1. If the antenna is not matched to the coax, SWR will occur.
2. Changing the length of the coax does not change SWR.
3. Changing the length of the coax -does- change the -apparent- SWR at the radio end of the coax. And for that reason,
4. SWR should be tested at the antenna, not at the radio.

The facts speak for themselves. That's all any operator needs to know. At the prompting of a couple readers, I am going to add a page that explains why all this happens in bonehead-terms so that anyone can understand it, even you. If you want to post your own page, that's fine. If you want to discuss theory, that's fine too, just post some valid references. Until you post some references or show some math to back up your claims, don't expect much response from me to your trolling.

BTW, I'm still waiting for my $100.

I guess Frank's new name is George Warner and he now works for Lucent. You had better get twistie to do a header check for you Mopagan.

I tried this via Google around midday today and it still hasn't shown up. Slow isn't the word! If it does eventually show up in the database, this explains the duplication.

>It's nothing new. I wrote a basic program in 1982 on a Commodore 64,
>that interfaced it to a Realistic TRC 459 (The computer controlled
>base). I wrote it because a local dirt bag challenged me that I couldn't
>be on the radio 24/7 to "police" his activities. So I wrote "Dirtball
>Busters". It scanned the radio through the frequencies, until it found
>his signal (He was very close so I could use the full squelch trigger).
>It then keyed the transmitter and gave a 30 second synthesized voice
>monolog, laced with witty comments, designed basically to plug his ears.
>It would then resume scanning. After about 2 days of this, he cried
>"uncle".

You're lucky someone didn't cry "Uncle Charlie." But then you were violating FCC rules/regs for a "higher cause," right?

Geez... thanks very much for the info!!
I really loved the "puff of smoke" part! LOL

Anyone have any GOOD experiences with them?
I was considering ordering an antenna from them...
Is their basic web-ordering act at all together?
Maybe it IS worth paying a few more $ (and driving
about 30 miles) to my nearest dealer. Thanks! JD

I have heard of a local group of CBers doing just this. All lived within

a short distance of each other. And enough 27MHz signal was able to
leak thru the cable system so everyone could hear each other without
hearing much if any external over the air CBers. A private party line
of sorts. Probably trashed TV channel 2 though.

A CB SSB receiver can hear a regular AM CB transmission. The
reception will probably sound a bit like Donald Duck with
possibly a whistle in the background. Play with the clarifer.
Tune whatever channels the locals like to yack on. The radio
probably has an AM receiver mode on it as well, try it. Find
some signals on AM, then switch modes to SSB upper or lower
sideband and you should hear those signals sound like Donald Duck
and whistles. Normal for AM received by an SSB radio.

The story I heard was that this guy blew his finals. I don't remember
if it was the same guy who plugged the 12VDC cord into a 110AC wall
outlet though...

4 or 5 watts of RF would be instant death for a cable tv amplifier.

You are correct, maximum rms dissipation of two tubes should be about 56
watts. The power out will depend on the class of operation.

No threats at all Mopar. Once somebody, along the lines of Doug, notices that Twisted likes to dance the jig when his chain is pulled I wouldn't be a bit surprised to see the same mess start all over again. He hasn't figured that part out yet, and I doubt he ever will. The only thing he has ever done on this news group is buzz around like some tiny gnat, trying to see who he can annoy the most, and has never given any technical help to anybody I have ever seen. He can't even if he tried because he sent me an E-mail a few months back where he admitted he is lucky to know how to solder a mic plug on.

When I get bored with Twisted making a clown out of himself I take some time to help a few people. In the SWR thread Twisted was up to his usual game, and somebody had to take him aside and tell him to bug off unless he has something useful to say.

As far as threats to CBers, I don't, and Twisted is a clown anyway. The worst he could do is squirt water on somebody with his plastic trick flower. Nothing to worry about unless I bust a rib laughing too hard at his posts.

I'm not familiar with the amp in question but many years ago I ran a
Thunderbolt 101 which used 2 6LQ6's averaging 70-90 AM/120-140 PEP SSB.
Great little amp, was nicely housed in all metal case, silver front with
Load & Tune controls, hi/lo/standby switch, SSB/AM mode switch & lighted
meter displaying output. Ampliphire was extremely clean from what I recall
having purchased it new off the shelf back in the early eighties.

Hello G SEVEN: I would think the power supply would be the toughest to get going. I have heard of the boys using the Alternators 3 phase output to drive a 3 phase transformer for the B+ high voltage Plate supply. But how many Alternators does it need? And where do the 3 phase transformers come from?

I would love to see a AC box, with its 3 phase power supply system.

Where is the trade off from using transistor amps vs the tube amps. I have seen the photos with 8 each, 200 amp Alternators. Lets say thats 800 amps at 16 volts, thats only 12,800 watts, with a Class C amp with 70% efficiently that comes to only 8,960 watts..... Is that figured right?

Honda has a new type of Generator out, that generates a low voltage at around 12 to 14 volts DC, and then converts it and regulates it to 115 VAC. I'll bet it could be used as a ride along in the back of a truck, or on a small trailer, with a modified output system. So that the vehicles didn't half to be modified???? Heres Honda's web site: http://www.hondapowerequipment.com/genindframe.htm

Well anyway knowing how this is all done would be neat!

> You're lucky someone didn't cry "Uncle Charlie." But then you were violating
> FCC rules/regs for a "higher cause," right?

I "did it" for a few reasons:

1. Because someone said that it couldn't be done. (I love a challenge).

2. At 22 years of age (Like I explained in the last post) I didn't care
about FCC rules or the ramifications of what I did. Today, I wouldn't
do it, since I have a more mature attitude, and respect for rules and
regs.

3. The learning experience. I learned alot about writing basic programs,
and how to use an I/O port for automatic control functions.

4. It was FUN! Making Dirtball's life miserable at the hands of "robo CB
cop", was laughable, not only by me, but several of the other
locals enjoyed it. I got many requests to build similar devices,
but I wasn't interested in doing so on a large scale.

> Me?...obsessive and delusional?...well I NEVER!

That pretty much sums it up.

YOU NEVER verified my address and phone number, because if you had you would have found out that I am not Frank B. but Frank D. Gilliland. My address and phone number are on the net for anyone to find if they have the smarts.

YOU NEVER considered that I was on vacation, just like I said. Instead you assumed that my wife (BTW, I'm not married, and I don't know anyone named Barb) restricted my computer access.

YOU NEVER read any of my posts where I show the real problem with the newsgroup. I was only doing what they do to others, no more, no less.

YOU NEVER thought for a minute that I used only one email address. You jumped on the keyklown bandwagon and took it for granted that I was the one spamming and posting porn.

YOU NEVER took me up on my general offer for any info about me when it was offered. Not like that would make any difference to a mind that has already made it's own biased decisions based only on suspicions

but no proof.

And YOU NEVER stop to think that while you have the right to post what you want to the group -- despite my objections -- I have just as much right to voice those objections.

You still don't get it, do you? You want everything like it was before, but you can't seem to accept that that is not going to happen. As more and more people discover the internet, more and more people will exercise their civic responsibilities, just as they do in their communities. The newsgroup is a community as well, and it is a small part of the much larger community of the internet. The internet is no longer just a means of communication for hackers, anarchists and rebels-without-a-clue. It is evolving into a reflection of society in general. As more and more responsible citizens make their presense known, the keyklowns will need to hide their activities here just as they do elsewhere.

This system -- civilization -- is supposed to work for everyone, not just a handfull of sociopathic half-wits that leech away the benefits and destroy anything good. You can either adapt to the inevitible future, or you can wallow in the past, getting drunk and singing about the good 'ol days. It's up to you.
I am really suprised that haven't learned by now that there is nothing you or anyone can say to change my mind. Oh well, live and learn.

So how did the 27 mhz signal get through the isolators in the cable
drop?

unless they burned them out first.

To test the SSB for transmitting, first make sure that you are in CB mode, not PA. Next, switch to either USB or LSB. With the mike plugged in, and working, key the transmitter and whistle into the microphone. You should see an indication of power out on the radio's power meter. If you have an external power meter, hook it up, and you should see about 12 watts while transmitting in SSB. To test for receive, tune to channel 35 through 40 and just listen, preferabley with the squelch completely off. Do this in both USB and LSB. You may have to test the receiver at various times throughout the day, until someone is actuall on the air.

5253. Re: Smith charts and SWR

Newsgroup: rec.radio.cb
Date: 2001-07-20 17:17:01 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <9cogltcot1kp7t3j9bjln7ret2vk93tr5k@4ax.com>
Source record: 89392

Greetings!

Perhaps a better way to phrase this would be...

When the antenna SWR has not been changed and is different from the impedance of the coax, the coaxial line does not see an equivalent, or balanced load. Since coax is unbalanced by it's construction, it reacts to the load and exhibits a trait that creates common mode currents.

These common mode currents make the coax a part of the active antenna system. Where the coax becomes an element of the antenna.

When the antenna itself can't provide a low SWR, the coax cannot provide a means to lower the antennas SWR. But can be used as an active tunable element by adjusting it's length.

Adjusting length of coax - again does not provide a change in SWR for the antenna, only a method in which to use common mode currents to an advantage - the coax becomes a tunable element in the active antenna system. We have not improved antennas resonance, only provided a means to use an inefficient antenna more effectively. Not efficiently. Common mode currents are bound within the coax and do not radiate as an antenna element would - an antenna using this scheme is inefficient.

When dealing with a conjugate match, you are dealing with an antenna system known to have an impedance that will not meet the coaxial impedance, but has resonance at the frequency of interest. This would reduce common mode currents - the antenna is balanced - only not at the same impedance the coaxial line is. To adjust SWR using this method is by changing, or adjusting the coaxial impedance to match the input impedance needed by the transmitter. This would also require specific lengths - but not due to common mode currents as an active element, but due to the antenna is resonate and is balanced at the frequency of interest, we only have the problem of meeting the impedance of the antenna to the transmitter impedance.

This may be the quandary...

Common mode currents - high SWR and antenna is not resonate.

Conjugate match - High SWR but antenna is resonate.

Thoughts anyone?

5254. Re: EEI Express Electronics?

Newsgroup: rec.radio.cb
Date: 2001-07-20 17:29:27 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <o6qgltoke5ejmdblk2n46i515i9h768jch@4ax.com>
Source record: 89393

Greetings!

When you buy a stock radio from them, they're just like anyone else.
You get a factory warranty.

When you get any type of mods done [there are three types they list
prices accordingly] you get EEI's warranty. And they will repair the
radio - not the factory. As far as what it will cost? Good guess...

When you do the mods, EEI and factory don't give you any warranty.

Want your money back, good luck - it will take a while. They earn
interest off of it first. A BBB complaint has been filed due to the
length of time it takes for a refund.

Just don't believe the "power ratings" too much.

Buying a stock radio from them you should have no problems.

However, if you get a TT'd radio, you might find neighbors lining up
outside selling tickets to take a swing at your radio with a baseball
bat.

On Thu, 19 Jul 2001 11:33:44 -0600, while the modem was busy tying up
IRQ's with the Mouse, John Daspit <daspit@lasp.colorado.edu>
dissertated the following:

:+> Hi all,
:+> Anyone ever buy anything from EEI?
:+> What's the story, are they for real? Thanks, JD

<<Hello G SEVEN: I would think the power supply would be the toughest to get going. I have heard of the boys using the Alternators 3 phase output to drive a 3 phase transformer for the B+ high voltage Plate supply. But how many Alternators does it need? And where do the 3 phase transformers come from?

I would love to see a AC box, with its 3 phase power supply system.

Where is the trade off from using transistor amps vs the tube amps. I have seen the photos with 8 each, 200 amp Alternators. Lets say thats 800 amps at 16 volts, thats only 12,800 watts, with a Class C amp with 70% efficiently that comes to only 8,960 watts..... Is that figured right?

Honda has a new type of Generator out, that generates a low voltage at around 12 to 14 volts DC, and then converts it and regulates it to 115 VAC. I'll bet it could be used as a ride along in the back of a truck, or on a small trailer, with a modified output system. So that the vehicles didn't half to be modified???? Heres Honda's web site: http://www.hondapowerequipment.com/genindframe.htm

Well anyway knowing how this is all done would be neat!

Jay in the Mojave

I will avoid personal attacks like the ones you have posted calling some one "son". This is a direct conflict with what these postings are SUPPOSED to be about. I will abide with the issue at hand.
I find myself quite amused that you take what you hear and read quite literally. I have been investigating the Feds. underhanded dealings concerning global communications for almost a year, as part of my studies devoted to journalism.
Have you ever heard of spin? Propaganda? The FCC is inundated with such high-tech crimes such as cellular cloning and computer related crimes. What you are hearing and reading is complete hyberbole and spin. Simply put, this is another political maneuver to get the cash flowig. It has absolutely nothing to do with enforcement of radio. I now what he has said he was going to do. I know he is going to streamline, reorganize, etc. Pure hype. This is akin to a politician telling his costituents what they want to hear to pacify their whetted appetites to appease the here-and-now. You are welcome to believe whatever you like. Take it from somene who has been denied countless interviews, granted a few, and no-commented to- death when it comes to who really is in charge at the FCC. If you believe it's saviour time, you have one hell of a wake-up call pending you my friend. I can supply you with hundreds of hours of interviews from the NSAs covert Echelon global spy communications system(monitors ALL modes of communication for "key" words) clear down to the FCCs local, regional and National Directors comments. Who you think is in charge isn't, and what you think will take place, won't. The resources simply are not there and congress' pending vote on the current bill is unlikely to gather the muster to pass. Even if it does, the

allocation of funds is the equivalent of just a few dozen or so added employees. No, your messiah is a false god. What will likely take place SOMETIME in the future, is that local municipalities will be given the jurisdiction of enforcing their own areas. But this is old news. Like I said, you are free to believe what you like and no one will think ill of you for it. But these are the facts. It is my profession and my passion to educate the public.(I am a writer) Especially when it comes to Big Brothers Bull. There are many avenues for you to obtain the true information on what is truly taking place. Unfortunately, the gentleman who now claims he holds the reigns at the FCC has not the power or the status that you so graciously allow him. But with a few more posts like yours, I am sure that "Camelot" is just over that next hill.....

No Mr.Jay,
slightly off with your math also most class c amps are around 60% or less efficiency.
8 alternators x 200 amps = 1,600 amps x 16 volts = 25,600 watts DC input power x 60% eff = 15,300 watts possible.

But the best part they get more than 16 volts out of those alternators.

1,600amps x 20 volts = 32,000 Dc input power watts x 60% eff= 19,200 watts output possible.

Hello Scott: Why would it cost soooo much?

Miss Dinah down at the fillin station has gallon jugs of fine red or white (Both kinds) fer only 3 bucks a jug, buy ya gots to leave a dollar deposit fer the jug. That puts a big time dent in shooin them. And ya don't half to fight no cork, it just unscrews with a metal lid.

After I get a dozon jugs or so I then turn them in for more filled jugs.

After a while the carpet starts to be the same color as the red whine.

I like to fire up a nice glass of fine red whine when I am ah BBQ'in the old 55 gallon drum. I park the 64 Buick near the BBQ, and turn up the radio, Yodel and sing dependin on how much fine wine I have had. After a few I don't notice how much the trailer is ah leanin.

BENTONVILLE, ARK (AP) -

Some Wal-Mart customers soon will be able to sample a new discount item, Wal-Mart's own brand
of wine. The world's largest retail chain is teaming up with E&J Gallo Winery of Modesto, Calif., to
produce the spirits at an affordable price - in the $6-8 range.

While wine connoisseurs may not be inclined to throw a bottle of Wal-Mart brand wine into their
shopping carts, there is a market for cheap wine said Kathy Micken, professor of marketing at
Roger
Williams University in Bristol, R.I., "There is wine in a box that people are willing to buy,"
she said.
"But, the right name is important."

With that in mind, we now present the top 15 suggested names for Wal-Mart Wine:
15. Box O' Grapes
14. Chateau Traileur Doublewide
13. White Trashfindel
12. Big Red Gulp
11. Grape Expectations
10. Domaine Wal-Mart "Merde du Pays"
9. NASCAbernet
8. Chef Boyardeaux
7. Peanut Noir
6. Blue Light Special Nun
5. Chateau des Moines
4. Martha Stewart's Sour Grapes
3. I Can't Believe It's Not Vinegar!
2. World Championship Wriesling

and the number one name for Wal-Mart Wine...

HGI manipulates statistics to suit their own agenda.
I would seem to me that "children" are persons 17 years and younger. HCI realizes the gun death statistics drop exponentially when they do not include the 18 to 25 year old group.
Leave it up to Sarah Brady and you will not be able to possess a compound bow five years from now.

This all makes me wonder when they will be coming after alcohol, automobiles and kitchen knives.

I think the "children" need DCM marksmanship training.
They need to know how to strip and clean an AR-15/M-16/M1/any high power rifle. Along with that they need to know basic firearms responsibiliy.
Upon completion of the DCM training the kids need to take a course on understanding the Constitution of the United States of America. That way they know that the enemy is not the kid down the street or their parents.
The enemy is anyone who would violate their oath of office and undermine the intent of our Founding Fathers.
Lets try that for a generation and see what kind of society we end up with.

Um.. ok.. right.. the only emission modes allowed on CB, according to
the FCC rules, are AM, LSB, and USB. FM and CW are disallowed.

Not that it's a bad idea... if you could use a tone keyer to transmit AM
with the CW as the audio, that would work...

You make me laugh they are only rules? What do you call it when they fine your stupid ass 15,000 is that a law you broke or a rule what is the difference it is illegal just the same, and you can be fined and found guilty in a court of LAW. You are a very stupid person landshark you suprise me by your idiotic remarks. So you are saying we can use the police band in between there conversations? I mean like what just stand by and let it be handled HaHalet them do there thing then jump in when they unkey the mike, you are a classhole for sure. And you also say the IRS,FCC etc doesnt have to follow rules ? Another idiot statement. No you must follow there rules or face the penalty if and when caught. Everytime you speak another asshole is born.

>I must say all of you guys are sure a great bunch of yo yos.....
>the guy asked for help and just because your a ham you think your a big
>deal!!!

You missed the point.

The guy was told to put the radio on AM, and he asked whether he should use AM, LSB, or USB.

There was no reason to go farther with testing methods. In the first place, he only had one SSB radio, so he could not listen to himself. Second, he didn't have a microphone hooked up. Third, he would not have understood the instructions if we gave them because of a lack of basic knowledge about radio. Fourth, he appeared to be a "troll" who was advertising an offering on E-bay. (He may have backtracked on this, but that was the initial impression he gave).

I'll grant my response might have seemed harsh. At least I was more "measured" than the person who recommended the AC line cord. :)

Wonderful. Then you should be able to supply all the proof ot twisties
accusations, like I am Glenn Sparks, Leland, Doug, N7VCF, and BigBen.
And you should be able to name those publications he writes for. Does
this also mean that you are going to take responsibility for his
forgings and spam? How about his threats as 1mangang?

I have suggested that you don't step into this, but you seem really
eager to mix it up. Fine.

>Um.. ok.. right.. the only emission modes allowed on CB, according to
>the FCC rules, are AM, LSB, and USB. FM and CW are disallowed.

Ah, but I have no less than three examples of FCC approved 100 to 300mW transmitters for 27.1250MHz in my peronal collection. Actually there's nothing in Part 95 that "specifically" disallows the use of "Morse code" on CB. (Not CW, the terms are not necessarily interchangeable.) The use of QRP transceivers for Morse on CB falls under Part 15 as opposed to Part 95. All the sets come with an "International Morse Code" placard on the front and a "FCC Part 15 Approved" plate/sticker on the rear. They're usually "crystalled" for ch. 14 or 25.1250MHz. My first h/t was a G.E. and it did an admirable job for an h/t.

>Not that it's a bad idea... if you could use a tone keyer to transmit AM
>with the CW as the audio, that would work...

I suspect (I'm actually more than sure.) that this is how it's done. True CW is not actually generated so they comply with Part 95, while a tone oscillator is employed to produce the Morse. My niece and I have spanned 15 mi. on 200mW and even some nasty "splash" (Like that technical terminology?) from our Kw friends on ch. 6 couldn't "stop the music." I'm using a "base" (really the same h/t innards housed in a "base" enclosure and tweaked up an extra 100 mW.) unit called the Signature, Jr. and my niece is using the Concept 2000 pictured in the ebay link I provided in my original post. I drilled a hole in the side and installed a mini-phono jack so I could use my Vibroplex straight key rather than the on-board unit, like night and day. We've even had a couple of hams (I guess? ;-)) drop down and throw us a few dits and dahs to show their support. Started out as a way to practice while we learned but you know, where pretty proud of the fact that we put Morse "legally" on 11 meters. Fourteen-year-old niece thinks CW is "way cool" thanks to Leonardo what's-his-face and the movie 'Titanic.' When she gets her General or Tech "+"...I'll have a replica Titanic key ready as a "graduation" gift. Take it easy.

>Um.. ok.. right.. the only emission modes allowed on CB, according to
>the FCC rules, are AM, LSB, and USB. FM and CW are disallowed.

Ah, but I have no less than three examples of FCC approved 100 to 300mW transmitters for 27.1250MHz in my peronal collection. Actually there's nothing in Part 95 that "specifically" disallows the use of "Morse code" on CB. (Not CW, the terms are not necessarily interchangeable.) The use of QRP transceivers for Morse on CB falls under Part 15 as opposed to Part 95. All the sets come with an "International Morse Code" placard on the front and a "FCC Part 15 Approved" plate/sticker on the rear. They're usually "crystalled" for ch. 14 or 25.1250MHz. My first h/t was a G.E. and it did an admirable job for an h/t.

>Not that it's a bad idea... if you could use a tone keyer to transmit AM
>with the CW as the audio, that would work...

I suspect (I'm actually more than sure.) that this is how it's done. True CW is not actually generated so they comply with Part 95, while a tone oscillator is employed to produce the Morse. My niece and I have spanned 15 mi. on 200mW and even some nasty "splash" (Like that technical terminology?) from our Kw friends on ch. 6 couldn't "stop the music." I'm using a "base" (Really just the same h/t
innards housed in a "base" enclosure and tweaked up an extra 100 mW.) unit called the Signature, Jr. and my niece is using the Concept 2000 pictured in the ebay link I provided in my original post. I drilled a hole in the side and installed a mini-phono jack so I could use my Vibroplex straight key rather than the on-board unit, like night and day. We've even had a couple of hams (I guess? ;-)) drop down and throw us a few dits and dahs to show their support. Started out as a way to practice while we learned but you know,? we're pretty darn
proud of the fact that we put Morse "legally" on 11 meters. Fourteen-year-old niece thinks CW is "way cool" thanks to Leonardo what's-his-face and the movie 'Titanic.' When she gets her General or Tech "+"...I'll have a replica Titanic key ready as a "graduation" gift. Take it easy.

Good Job Brenda Ann ... i have also been a ham since 1978 code never
interested me at all i passed every element of the theory more than once in
hopes that one day i would get my speed up to 12 wpm ... well i never did
study anymore code and now thanxs to the fcc i am a general. and the same
as you i know more electronic theory and amatuer operating principles etc
than many extra, advanced and general class hams who have been able to pass
the code portion. for what its worth.

> FREEDOM of COMMUNICATION =
> A BASIC HUMAN _RIGHT_
>
> Think about it.

The Freedom of Speech; Freedom of Expression; Freedom of
Communication. Yes, let's do think about it.

Does this freedom include standing at *your* doorstep at 2AM, playing over-amped AC/DC tunes to the neighborhood because I have something to "say to the world"?

Does this freedom include standing up at a public presentation, or in a movie theatre, and howling at the top of my lungs, in order to drown the presentation out, because I don't like what I'm hearing?

Does this freedom to communicate include willfully interfering with Emergency Services transmissions because I think it's funny that the Ambulance driver and the dispatcher can't understand each other?

Does this freedom to communicate include occupying any frequency I choose, at any power output level I choose, in spite of the effect it may have the effect of interfering with the rights of other communicators, as well as my neighbors' right to watch television in piece and quiet?

Each of these examples is a representation of the good that can come from the duties of a regulating agency. To be sure, there are many examples of poor band management, and unexplainable rulings by the FCC, but that does not *necessarily* mean that the radio spectrum should not be regulated in some way. However, it also does not mean that the FCC *must* be the regulatory body either. In fact, a consortium of clubs, agencies, and services combined under the joint auspices of managing the spectrum to balance maximum freedom with maximum availability, might be able to provide the same services the FCC does, with far less bureaucracy and far less political motivation.

There are numerous examples of such a thing working quite successfully for the internet, why not for the radio spectrum as well?

Look at the output power. It would make the radio "unlicensed". You could
use FM or even one of the packet modes, if you wished.

I don't know if they still use milliwatts as the defining factor, or if it
is millivolts at a specified distance from the antenna.

Shoot, in that case I suppose it might actually be possible to home-brew a
"real" CW QRP rig? That'd be neat!

They don't publish the CB books anymore, but you can usually find them
listed with old manual vendors or on ebay.

I was wondering if anyone in my area here in Chicago(western suburbs) could verify a report. A gentleman I had many a conversation with on-the-air and had visited this news group many times has been reported to have passed away last week. His name on the air was "G Man".

Hi Randy,

>How do you figure eight MHz?

Thats eight MHz plus of combined "RF real estate," i.e. band space. Not the exact frequency 8MHz, that's why I wrote "eight MHz" and not 8MHz. Hope that explanation helps. :-)

That's

2m: 144 thru 148MHz = 4 MHz
6m 50 thru 54MHz = 4 MHz
For a combined ====> 8 MHz

The "plus" is for 70cm, etc...

You forget about 1.2Ghz, plus the bands above 1.2, at 3 and 7, I believe... There's quite alot of bandwidth up above 1Ghz that has not been claimed.. Some of it IS in use, though... so if you have a transceiver that's capable of oscillating that quickly, be sure you're in the right spot.

According to the band plan, Technician amateurs in the US have the following bands at their disposal:

6M: 50-54Mhz (4 mhz BW)
2M: 144-148Mhz (4 mhz BW)
1.25M: 222-225Mhz (3 mhz BW)
70cm: 420-450Mhz (30 mhz bw)
900Mhz: 902-928Mhz (26 mhz bw)
1.2Ghz: 1240Mhz-1300Mhz (60Mhz bw)

These bands may vary in other countries, but in the US it looks like 4+4+3+30+26+60=127Mhz of total bandwidth to talk on/play with. That's a bit more than 8 mhz of bandwidth...

-SSB

Regardless of how you may view things, and I don't disrespect you for your opinion, I am quite satisfied with the "prototype" amps that Dave builds as a matter of fact, I have several other type of prototype items that Dave builds as well. I shoot a lot of skip, and hit the breaks when I feel like I want to hear everyone sell those wolf tickets about how bad they are! LOL If there is a better amp! it couldn't do anything that would better my illegal 10,000 in the corner AC Suburban here in VA, I love to fight in DX land, and could careless about talking on a channel or frequency where there is no one else talking or are waiting for me to sign off so they can talk. unlike most of the people on this site my name is real and I don't post through some "hide me please" message center. Hey! I speed, cuss once in a blue moon, j walk, change lanes without using my signal, and break a few other laws as well, so, I really careless who knows where I live or what my name is. So if any of you pass through the back woods of Fredericksburg, stop on in and have a cup of coffee out in the shop, I just might be hanging 6 of 7 alternators on someone's suburban, or building a rectifier bridge to get all that AC power crammed into somebody's line of Japanese girls. Thanks again, Peewee Dave Made (NJ) Suburban, and never except and impostor

Hahaha Landshark its one thing to be a douche bag it is another to be a douche bag who cannot read post and clearly understand what is being said. Now didn't you say I am a no-code tech for 25 years? So who is lying Well Like I said you are 100% wrong again. But I am glad you are researching posts from me. hehehe Thought you didn't have time for that nonsense. But yet you still cannot find anything about me that cuts to the chase like your fag laden posts.

Just to prove who is lying which is you, this is what I said in the previous post "What does it say about me being a no code tech for 25 years, I never claimed not to be a ham but you say I am a nocoder for 25 years you had better go back and reread my posts" Where have I lied you homosexual alt.sex.transgender poster. Keep diggin boy. You are starting to sound like twistie What does Frank or Doug have to do with me...

You forgot 20 at 70cm, and 223 to 225, along with the MW bands. All in all, it's a whole lot more spectrum, MHz wise, than all the HF bands combined.

Take care.

Just to keep definitions correct, these probably transmitted a keyed tone which modulated an AM carrer. That would make the emmission A2.

Have a Gemtronics 3000 with a built in old type alarm & clock of the 70's (cards that flip). It looks great and sounds great.

Any offers?
Thanks,

Fred / South Carolina

Hi De Ho Helmut,
Nice of you to respond so quickly, just
making sure your watching. I really didn't
spend much time at all finding that little
tid bit, but I'm sure when I get an extra
hour I'll look a little harder, just to make
you happy.
I've explained those posts and it seems
that you and Frank are the only ones that
care, how nice :^)
What does Frank & Doug have to do with
you, you ask? Why aren't you the one doing
the research for them? That's what they told me.
I guess I could be wrong, bummer.

Landshark

"Hahaha Landshark its one thing to be a douche bag it is another to be a douche bag who cannot read post and clearly understand what is being said. Now didn't you say I am a no-code tech for 25 years? So who is lying Well Like I said you are 100% wrong again. But I am glad you are researching posts from me. hehehe Thought you didn't have time for that nonsense. But yet you still cannot find anything about me that cuts to the chase like your fag laden posts.

Just to prove who is lying which is you, this is what I said in the previous post "What does it say about me being a no code tech for 25 years, I never claimed not to be a ham but you say I am a nocoder for 25 years you had better go back and reread my posts" Where have I lied you homosexual alt.sex.transgender poster. Keep diggin boy. You are starting to sound like twistie What does Frank or Doug have to do with me..."

<<
But from where I "hide" a few miles is country,as I've already said,I don't
TVI myself..my weakness is a cheap cordless phone.

That's not meant to excuse those who are blasting anything with ears.
There is a happy medium,depending on the fundementals of ones proximity.
This holds true for the ham bands as well. I do have one rig that might
fit the 40 channel thing,but "a few miles" is a stretch,and it's been moth
balled for at least 5 years.(go figure)

--
-Moparholic>>

ice can tell you i used to do ilegal amounts of bird watts into a 4 foot
fighting stick on the long nose parked 20 miles from the nearest law abiding
community or what have you and it still destroyed the shit out of everything
there and beyond that. do the math good buddy a few miles of tree leaves dont
absorb enough rf to keep you out of trouble. now just because i have reformed
dont mean you do but if i were your townies i wouldnt be too happy and might be
making a few phone calls if you get my meaning. zebman out.....

My My My Bill,
It must be nice have such a fan club. I might have to
get another license and join in on all the fun. I've
pretty much conquered the cb fan club, I guess it's
time to get a license again and have some fun on 2 mtr.

First off Big Gary, I only
said that's correct for your
statement. Second the rest
was for the benefit of Mr.
(I have a yeast infection)
Joe. His Jerry Farwell crusade
on legalities is pure BULLSHIT.
Yes BULLSHIT. Colorful metaphors
are a part of the english language
and if you don't like them, Don't
read them, or better yet, don't
let them bother you.
Oh and by the way..... My name
is not Mark, I used his shit stained
name in vain.

Nice to hear from ya. I hear it's been real
hot & sticky weather at home lately, one of
my co-workers in-laws are form out there and
she said it sucked. I hope you and all the
family's doing well.

Date: 1995/05/28

I need to know the proper MaxPhysPage setting for the system.ini for
WFWG 3.11. I have 20Mb of physical RAM (20352Kb). The format is:
MaxPhysPage=<hex page number>, where <hex page number> is the maximum
physical page of RAM. I read that windows only recognizes the first
16Mb of RAM. I have an 11Mb Perm Swap file, but when I start windows,
I have only 23Mb free. Any help is greatly appreciated.

Subject: Patches for Sale.....
Newsgroups: rec.scouting
(This is the only article in this thread)
Date: 1996/02/05

I am an Eagle scout from the Modoc Area Council in So Oregon and No, Calif.
I
have many council patches and OA flaps from around the country, and need to
sell them due to family emergency. The most unique patch I have is the
Makualla Lodge trader OA flap from 1984. The regular flap had a no-trade
restriction and there were only 600 made of the trader flap. Also, if anyone
has any price guides, I would be interested in seeing a recent copy to
establish value. I've been overseas for the past 4 years and haven't had a
chance to catch up yet.
Thanks in advance.

Jay, use a small pulley on the alternator. To get 200 amps from that
alternator you need to spin it. This will also allow it to do its job
without revving the motor as high.

Yes I know but I guess I didn't make my question clear enough.
My radio, Pace Sidetalk 1000M is a 40 channel. The Sams index
lists it as CB-104 and I am sure that is the one for the
23 channel model. The crazy thing is, the 23 and the 40 channel
both have the same model number and they look exactly alike.

Then you need to verify the model number on the back tag. Here is a
list of the Sidetalk models and their respective Sams books:

CB-1023 - CB67
CB-1023B - CB68
1000B - CB94
1000M - CB104
1000MC - CB241

Message-ID: <dzq67.6464$b3.2205429@feed.centurytel.net>
Source record: 89440

Hmmmm..... let's see:
$465 (average welfare check) divided by $9.97 (price of 6 liter box of Wal Mart wine) = 46.64 parties per month.
Or...
$465 divided by $5.87 (price of 4 liter Wal Mart wine) = 79.22 divided by 2 (two four liter boxes for a party where the neighbor's wife, Tiffany, does a table dance) = 39.61.
That would leave some change left over for 7-up to make flips with at trailer park parties. This way one will be sober enough to realize that Tiffany really has a thing for your wife rather than you. Latex matress covers may be another wise investment.
whoa..... I'm dizzy thinking about that.
I hope this clears things up.

Check with Miss Dinah and see if she can order you some 55 gallon drums of wine (hell, she could even get you some of that fancy Merlot). The deposit is higher, but I guarntee that ye wont be heading back to the store at a quarter-tuh-two when you need to wash down them burnt ball park franks.
Oh, you won't need a corkscrew for the drums. You might want to invest in a bung wrench so you don't have to keep inviting Billy Bob (from the fillin' station) over.
Roger?!

=)

>Just to keep definitions correct, these probably transmitted a keyed tone
>which
>modulated an AM carrer. That would make the emmission A2.
>

To cut to the chase, no mods. We'll keep the definitions correct and the emission A2. The only mod is the addition of the key jack for the Vibroplex.

I'm going to do a little more research and see at what criteria this becomes an unlicensed transciever under Part 15 as opposed to a CB transceiver under Part 95. If it's true that true CW (as well as FM, packet, etc.) is allowed under a certain power level, then I'm ordering a 10 meter QRP CW kit pronto and researching how to "zero beat" it on 27.1250MHz.

If not, these rigs are still FCC approved and put out the tone we need to legally practice CW...er, Morse code on CB frequencies. After all, that's their purpose as designed and the FCC said "run with it!" One of the h/t's produces a lower tone than the rest, I'll try to see if I can adjust the tone to a higher pitch. Other than that, all's well. Thanks QRM, and take it easy.

I knew a guy in high school that thought he should wear one jock strap on
each leg.
The coach made him a flag-pole carrier.
I don't know if that fits in, but it seemed appropriate.

>Ask Gilligan how much I like idle thteats..)

Moped sure does like idle threats alright. He likes them so much he made a few to me. So while I was in Ohio I gave him three opportunities to make good on those threats but he wimped out all three times. Actually he only wimped out twice, because the second time he tried to stage an ambush, but he didn't get any support from any of his friends (because he doesn't have any friends -- in fact, one of his old "friends" offered me moped's home address!), so he just hid and watched the parking lot from a distance for over an hour (we spotted him hiding while we munched our hamburgers in the middle of the parking lot).

You might take note that he didn't start making threats until he added the X-No-Archive=yes flag in his header, which is kind of stupid since newsone and a couple other archives keep all posts, with full headers, regardless of that flag.

So yes, moped really likes idle threats, but why he makes them is still a matter of speculation. Actually, I think he really wants someone to come and kick the shit out of him so he can blame all his problems on someone else. Either that or he is tired of mowing lawns for a living and is looking for a reason to sue someone. After reading moped's posts for several months, it's clear that any reason for his threats is going to be a really stupid one, that's for sure.

Replying to your own posts now? Wow, it took you less than two minutes
to reply to mine, and it took you only three minutes to reply to
bismark's post earlier today. Last week it took almost six minutes, so
I guess you are using two fingers to type now, huh?

Poor, lonely moped, sitting beside the computer for half the day and
on through a Saturday night, hoping someone will talk to you, ready to
reply the moment someone recognizes your existance. You should find
yourself a nice petite 22 yo blond nymph like I did, then you will
have a legitimate reason to stay home on the weekends. It's not all
it's cracked up to be, tho, because you have to make up excuses to get
-out- of the bedroom and catch your breath. ......ooops, sorry moped,
I didn't mean to rub it in. Just go log onto your favorite porno site
and you will be fine.....

Here's my favorite moped joke:

Q: Why does moparholic rub his eyes when he wakes up in the morning?

A: Because he doesn't have any balls to scratch.

So you see, I -can't- have him by the gonads. The truth is that he's
too inept to socialize on a normal level, so he resorts to abusive
communication. He want's people to hate him, because then at least he
knows that at least one person feels -something- for him, even if it
is contempt. So he eggs it on and gets his daily dose of social
contact. It's a passive-aggressive thing, and it makes him feel
important. You will see this behavior repeated in his posts not only
in this ng but in others as well.

Keep us posted on your progress, Bert. And if we get a band opening, perhaps I can work you on CW. Like you, I have a tone-modulated Morse Code radio transmitter which will work on 27.1250. It also will do A1 emissions, if that's what we need.

"S B" <ScottysAFreak22@webtv.net> wrote in message
news:26422-3B59A198-2@storefull-144.iap.bryant.webtv.net... SPAM ..
violation of newsgroup charter, WebTV's Terms of Service and generally
posted in poor taste.

READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK! The
full power of the internet is just beginning to be realized. $$$ I
STRONGLY URGE YOU TO KEEP READING.$$$$ I found this on
a bulletin board and decided to try it. A little while back, I was
browsing through newsgroups, just like you are now, and came across an
article similar to this that said you could make thousands of dollars
within weeks with only an initial investment of $6 So I thought, "Yeah
right, this must be a scam", but like most of us, I was curious, so I
kept reading. Anyway, it said that you send $1 to each of the 6 names
and address stated in the article. You then place your own name and
address in the bottom of the list at #6, and post the article in at
least 200 newsgroups, (there are thousands) No catch, that was it. So
after thinking it over, and talking to a few people first, I thought
about trying it. I figured "what have I got to lose except 6 stamps and
$6 right?" Then I invested the measly $6. Well GUESS WHAT!?... within 7
days, I started getting money in the mail! I was shocked! I figured it
would end soon, but the money just kept coming in. In my first week, I
made about $25. By the end of the second week I had made a total of over
$1,000! In the third week I had over $6,000 and it's still growing. This
is now my fourth week and I have made a total of just over $10,000 and
it's still coming in rapidly. It's certainly worth $6 and 6 stamps, I
have spent more than that on the lottery!! Let me tell you how this
works and most importantly, WHY it works... Also, make sure you print a
copy of this article NOW, so you can get the information off of it as
you need it. I promise you that if you follow the directions exactly,
that you will start making more money than you thought possible by doing
something so easy! Suggestion: Read this entire message carefully!(print
it out or download it.) Follow the simple directions and watch the money
come in!
It's easy. It's legal. And, your investment is only $6 (Plus : postage)
IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal;
and it is 99% no risk - it really works!
If all of the following instructions are adhered to, you will receive
extraordinary dividends. PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be :
yours in 20 to 60 days. This program remains successful because of the
honesty and integrity of the participants. Please continue its success
by carefully adhering to the instructions. You will now become part of
the Mail Order business. In this business your product is not solid and

tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success: STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name, and address,
and a $1 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161)
and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:
#1) Konstantin Klitenik
3165 Nostrand Ave. Apt.4G
Brooklyn, NY 11229
#2) David Lee
101 Russel St. Apt.#1
West Lafayette, IN 47906
#3)Garr Jones
1405 New Rodger Rd. Apt.BB8
Bristol, PA 19007
#4)Daniel Gomez
5795 NW 109TH ave. Apt#9
miami,FL 33178
#5)Brendan Harris
6107 Sweetgum Hollow Road
Wilmington, NC 28409
#6)Scott Bechtel
5850 Sky Pointe Dr. Apt. 2065
Las Vegas, NV 89130
STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember,
the more you post,
the more money you make! You won't get very much unless you post like crazy. :)
This is perfectly legal! If you have any doubts, refer to Title 18 : Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps

for yourself
and, whenever you need money, you can use it again, and again. *PLEASE REMEMBER* that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.
*NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6 ($1 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory. Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to. Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.) Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu.
Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! WEBTV users: Utilize your cut and paste skills, make any necassary changes and simpy post to the Newsgroups.
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE
MONEY
YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use,
as long as the postman will deliver it. **JUST MAKE SURE ALL THE

ADDRESSES ARE CORRECT.**
Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so...
People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, Play FAIRLY and HONESTLY and this will really work.
REMEMBER! This will actually work if you honestly send the 6 envlopes with $1.....
I fully believe in Karma and in what comes around goes around. Honestly, send in the $6 to the people on the list. And it will come back to you, big time.

I agree everybody has a right to freedom of speech and while they may not like the content (i dont particulary for that matter) switch it off or re-tune elswhere, how can all these people wine about thier rights and in the process want to stamp on other peoples.

It works two ways you know mate

5376. Re: SWR let's all join in.

Newsgroup: rec.radio.cb
Date: 2001-07-22 11:24:21 UTC
From: Brainbuster <brainbuster@lineone.net>
Message-ID: <tllj818munm280@corp.supernews.co.uk>
Source record: 89517

Coax Length Police <anylength@willdo.com> wrote .....
>> The length of your transmission line only affects the phase (ingoring
>> minor losses and common mode currents). And, as the man says, the phase
>> does not affect your SWR. That is, coax length does not affect SWR.

To which Frank (Sparky) Gilliland sparky@cet.com replied .....
|| But you are still lost on the point that nobody said changing the length
|| of the coax would change SWR. What it -does- do is to change the point
|| where the radio meets the standing wave, which can give false SWR
|| readings at the radio end of the transmission line.

This led to Coax Length Police <anylength@willdo.com> replying with .....
>> The changing impedance has not changed the SWR.
>> Go read the article I cited:
>> http://www.tmworld.com/articles/2001/07_smith.htm

** And yes, I have read this.

Furthermore, Coax Length Police <anylength@willdo.com> also wrote .....
|| I explained how an SWR meter works. It is not sensitive to the location
|| along the transmission line.

|| If you SWR reading has changed, it must be because some other parameter
|| has changed (e.g. coax loss)

Then, in a dramatic turn-about, Coax Length Police <anyLength@WillDo.com>
wrote .....
>> You haven't considered the possibility that other parameters (e.g. line
>> loss, common mode currents, tolerances, etc.) have indeed changed the
>> SWR.

** To translate - as Sparky only changed the length of the coax, and
** nothing else then this must suggest that changing the coax length
** has indeed changed the SWR !!
** Yet Coax Length Police <anylength@willdo.com> wrote
** " That is, coax length does not affect SWR. "

Handy Andy <CodysPC@Iserve.Net> joined in with ....
|| Adjusting length of coax - again does not provide a change in SWR for
|| the antenna,

|| To adjust SWR using this method is by changing, or adjusting the coaxial
|| impedance to match the input impedance needed by the transmitter. This
|| would also require specific lengths - but not due to common mode
|| currents as an active element, but due to the antenna is resonate and is

|| balanced at the frequency of interest, we only have the problem of
|| meeting the impedance of the antenna to the transmitter impedance.

|| Thoughts anyone?

** Which was so temping, I just had to join in ....

It seems that while many like to argue with Sparky, you all agree that the SWR displayed on the meter can change with coax length, while the real antenna SWR does not change. I say "can change" because this only applies if the load is not matched to the transmitter (SWR >1:1).
Even the reference http://www.tmworld.com/articles/2001/07_smith.htm agrees with this, as do my reference books (I always double check before sticking my neck out).

For the purpose of CB (this is rec.radio.cb) ....
Which part of the system actually transmits the signal ?
Exactly, the antenna.
So when you use your SWR meter, what are you testing ?
Exactly, the antenna.
So, regardless of reasons (phase, common mode signals, etc.), if your SWR reading is not due to reflection from your antenna alone, then surely it is false. If the purpose of the meter is to measure the reflection from the ANTENNA, then it (and the user) has surely been "fooled".

If you want to know the reflection from the antenna, read it at the base of the antenna, with a very short lead (or double PL-259) from the antenna. This removes the worry of cable loss, phase, common mode currents, velocity factor, coax length, what the *~!# are all those circles, etc.

Hello Frank: Wow, do ya think you take trivial things, much too
seriously?

I do.

I am not really sure what you saying there, but it reminded my of a
soapbox drama dialogue. And it sounds like you got wrapped around the
axle pretty good there.

I suggest you take a break, and not let such petty things bother you.
Even if it is entertainment to all the rest of us.

When we get a few guys all stirred up on the CB, we ask them if there
really taking CB radio seriously. Then they catch then selves and join
in the koas and antics. The guys on 2 meters really get lost! I am sure
my new eccho mic will be a big crowd pleaser!

The Martinez Brothers play a mean Spanish Gartar and Horn on channel 12
AM, catch the entertainment.

Hello N7KN: Yes this has it all cleared up alright.

Well let me clear up just one thing here, Since my brother (High Desert Don) married (Wellfair Clair), I gots a in with the wellfair office. I grabbed all the kids form the trailor park, and signed up for more wellfair. You should see the new Linear Amplifier, it only runs on 220 or 221 what ever it takes.
But we half to take Ma's Electik oven out to get to the 220 or 221 plug. And then reset the clock on the oven, when we put her back in, the oven that is.

Where a livin pretty good now. Got a new, well a used TV from Berts Place, I keep the 64 Buick running like a top. Rebuildin the old 67 truck, its my newest vehicle. Its got 4 wheel drive, and I got a new set of tall boy tires on it, and for the first time in ah long time, all the tires sizes match. Got duel 102" S/S whip antennas, Long Horn, bull horns on the hood, cop spot light, cop muffler, and best of all, got a cop (Motorola) Public Address Amplifier, and it even has a built in sirin, with all the different sirens, and is it loud. The PA Horn is pretty big but I mounted just underneth the front bumper. I call over the PA System ta Miss Dinah at the fillin station to get her out here ta wash off the bug guts offin the windshield, and check the oil. She just trys to ignore me, but I know shes ah diggin it.

The downtown Mojave junk yard is a good thing. Gonna get a cop motor for the truck one of these days.

5379. Re: SWR Tuning Issues, Please Help

Newsgroup: rec.radio.cb
Date: 2001-07-22 12:17:30 UTC
From: Brainbuster <brainbuster@lineone.net>
Message-ID: <tllj83hut07h81@corp.supernews.co.uk>
Source record: 89518

Prozacholic <zac@pro.com> correctly stated that ....
> Changing the length of your coax does nothing for the SWR of the Antenna.
>

Here we go again.

Changing the coax length does not tune the actual antenna. The antenna does all the work, so that is what you adjust - the coax just gets the signal there. If the ANTENNA is tuned correctly, then the meter reading will remain the same wherever you put the meter and whatever length your coax is.

I am not sure if your system is mobile or base but if you have a socket on the antenna base and can reach it OK, connect the SWR meter at the base of the antenna using a very short lead or double connector to the antenna. This may require two people, one taking readings and one keying.

If you still cannot get the SWR down, the antenna could be faulty. It has been known for a new antenna to be faulty.

If the SWR is ok at the antenna base but not at the radio end, then check your coax and meter. Do not place too much trust in internal meters on CB radios, they are not that reliable.

SWR meters don't usually become inaccurate, but they are easy to test and repair if suspect.

FCC CB Rule 12 - Permitted Communications

{A} You may use your CB station to transmit two-way plain language
communications. Two-way plain language
communications are communications without codes or coded messages.

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
Operating signals such as "ten codes" (10-4, etc.) are
not considered codes or coded messages. You may transmit two-way plain
language communications only to other CB stations, to units of your
own CB station, or to authorized government stations on CB frequencies
about-
[1] Your personal or business activities, or those of members of
your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or
drills conducted by, or actual emergencies announced by, the
Civil Defense Agency with authority over the area in which your
station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when
the signal is used to make contact, or to continue
communications (Examples: tone operated squelch, selective calling
circuits). If the signal is an audible tone, it must last no
longer than 15 seconds at one time. If the signal is a subaudible
tone, it may be transmitted continuously only as long as you are
talking.
{C} You may use your CB station to transmit one-way communications
(messages not intended for two or more CB stations) only for emergency
communications, traveler assistance, brief tests (radio checks) or
voice paging.

Are you guys that desne or do you actually think I am, Changing nics is not about hiding since my ip address shows everytime, perhaps paranoid people such as yourself employ this tactic when you post from anon newservers. why do I do it because I can, It is a good way to defeat filters as well and because it pisses you guys off. Show me where it says I cannot change name like I change my underwear. God knows Landshark has changed his many times as well as many others I must be the most popular tho. Hope to catch you on the air tonight... Channel 36 LSB?

Thanks QRM,

You can find us early, usually 7a.m., on Sunday mornings as well as some Saturdays. (If lazy bones niece decides to wake up and give me one ring on the telephone. :-) That's a joke because this girl is anything but lazy.) We manage to work a couple of evenings in there as well.

Love to hear you. We've had a few folks "drop in" and send "good luck," but no more. One person sent us a super fast string, I guess to give us a taste of higher speeds. (Sort of a "aim high" message, I suppose.) We're in Eastern NY and if we hear you, we'll certainly try to work you. Take it easy and thanks.

My My my,
Weren't you and the other legalese all
saying on how you had better be right?
Wow, another name to add to my list
of alias, I guess. I say go ahead, write him,
e-mail him, phone him, visit him.
Please tell me how it goes, I'd be curious
to what you three will make of it. I was very
interested Helmut with the one post that he
sign's his name with my addy, could you or
Frank give me the entire header or what google
search you did? My records on that hard drive
just doesn't show anything that day on my
terminal, it would be a great help. I just don't
have that much time lately, got to, taking a ride
up to Yosemite for the day.

Landshark

PS I also included his name & address again,
please feel free to call him. Also, thanks again
for just proving my statement that someone else
was using my setup, I couldn't have done any better
than you three did to prove me inocent.

Newsgroups: rec.scouting
(This is the only article in this thread)
Date: 1996/02/05

I am an Eagle scout from the Modoc Area Council in So Oregon and No, Calif.
I
have many council patches and OA flaps from around the country, and need to
sell them due to family emergency. The most unique patch I have is the
Makualla Lodge trader OA flap from 1984. The regular flap had a no-trade
restriction and there were only 600 made of the trader flap. Also, if anyone

has any price guides, I would be interested in seeing a recent copy to establish value. I've been overseas for the past 4 years and haven't had a chance to catch up yet.
Thanks in advance.

I just got a used Panasonic CTP-2780SF, and when I switch from the coax input to VIDEO 1 or 2 with the remote, the words VIDEO 1 (or 2) stay in the upper right corner after the time disappears. Anyone know how to make the VIDEO disappear too?

Is there any easy way to userID and password protect individual pages without access to the <root> on the server, which they won't give me. I've tried CGI, my server doesn't allow CGI scripts. I've tries .htaccess, won't work. I've tried everything I can find. Is there a html code that will look into a file in my directory on the server for a text field for the username and password?

When you wanna' call on 36 LSB? Make it later to avoid 9 dB of noise.

Do you think your radio can make it to underground fire city?

What a stinking mess. I didn't make it to half my service calls Friday
because there was no parking anywhere, and lots of coned off streets.

I spent 45 minutes going around one site looking for parking. So glad
for an R-134a conversion...blows 50 degree air on my knutz. <:

Hi everyone,
I must thank Roteck, Rodan, Helmut,
Capn Jack, Prozac, Proziac, World wide
Proziac, Zac Pro, etc, etc Oh hell I guess
I should thank Frank & Doug too, I'm sure
they helped a little.

They had enough time to research something
that I didn't really care about. Now in their
one flash of brilliance they found who the person
was that had access to my terminal and
passwords, Thank you Helmut, Rotac, Prozac,
Rodan, Capn. Jack, etc etc. Without you spending
hours looking for this information I would have
never known it was him, until I saw that one piece.

Source record: 89529

If you can memorize each letter in morse code you are almost at 5 words per minute. 5 wpm is VERY SLOW. When I took my code almost 20 years ago I could barely pass. What I did was write down the dots and dashes and decoded them after the test. From what I understand this is not permitted but no one said anything and that is when you had to take the test at the FCC office. Years later when I took my 13wpm I was only at around 10 words per minute. For some reason Y,Z,X,Q,F, and L always screwed me up and would make me miss a bunch of the next coming letters as I figured them out. I eneded up doing the same thing. I copied the words down on paper, and the few I missed I immediately wrote down the dots and dashes and worried about them later. I ended up a General at only 9 to 10 words per minute. Another tip is go to a Volunteer Examiner that gives a multiple choice test so you have a little luck involved if you do miss a few words here and there. You would be suprised how many letters you can miss and still pass. The ten questions are almost always- The two callsigns in the fake QSO that you are copying, their location, the rig they are running, thier power output, the antenna and height, and the 2 hams names. Even if you just get 60% of the letters you can almost always figure out what they said anyway. Take a paragraph of text, delete a bunch of random letters and see if you can figure out what it said. It is just like playing Wheel of Fortune or Hangman. Easier than you think- Good Luck!

I've been a ham for 20 years and into CB for 25. No flames please- I love Ham and CB and am just hoping to be helpful to some future hams.
Thanks!
Jim

<< Hello Frank: Wow, do ya think you take trivial things, much too seriously?

I do.

I am not really sure what you saying there, but it reminded my of a soapbox drama dialogue. And it sounds like you got wrapped around the axle pretty good there.

I suggest you take a break, and not let such petty things bother you. Even if it is entertainment to all the rest of us.

When we get a few guys all stirred up on the CB, we ask them if there really taking CB radio seriously. Then they catch then selves and join in the koas and antics. The guys on 2 meters really get lost! I am sure my new eccho mic will be a big crowd pleaser!

The Martinez Brothers play a mean Spanish Gartar and Horn on channel 12 AM, catch the entertainment.

Jay in the Mojave >>

frank listen close i will tell you the secret of jay. before i found the lord i was privie to all kinds of information from the keyknlown grapevine so to speak because i too was wicked in the ways of cb and accepted by the superstars and feared among the mud ducks. jay was once a engineer at a major aircraft plant [guess where] until he got too much radiation from the desert a-bomb test sites which by the way are still hot after all these years. now his fine mind turned to jelly and he has the intelligence level of a two year old running around the house with moms scissors. it is sad but we liked to keep him around as a mascot especially at breaks. jay of course will deny all this but it is as true as a weather vane on the barn roof in a hurricane. if you are ever in the mojave ask anyone about that engineer his brain got screwed up. zebman out.....

I am wanting to know how to find the correct
Sams book. The Sidetalk 1000M comes in a 23
and a 40 channel version. The index lists it
as CB-104. I don't have 104, but I'm thinking
that 104 covers the 23 channel version. The
index lists a 1000MC as CB-241.

I guess I was looking for someone out there
who had all the Sams and would help me find
the correct manual.

Yep, that's a dynamotor, alright. The whole setup looks like an early to mid 50's trunk-mount, single-channel mobile for low-band VHF. I can't tell what the final tube is, but I'm guessing it's good for 25 to 50 watts. Not pictured is the control head, and if you don't have that then the whole thing is really useless. I usually scrap these dinosaurs for parts because I haven't seen any collector interest (their capabilities were very limited). You might try posting the url to rec.radio.amateur.boatanchors.

Whatever it may be, it is older than my interest in radio. I do not
recognize the final either. Given that it is almost certainly 15khz
deviation, it is not legal today.

Good call Frank

Hi Garvin@Truss.net

Edited for brevity.

>FCC CB Rule 12 - Permitted Communications
>
>{A} You may use your CB station to transmit two-way plain language
>communications. Two-way plain language
>communications are communications without codes or coded messages.
>
>^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
>Operating signals such as "ten codes" (10-4, etc.) are
>not considered codes or coded messages.

Actually a few of us on r.r.a.p. went through this in a thread titled "CW & 11 Meters." Nobody can rip apart the FCC rules/regs like the folks on r.r.a.p., particularly with communications lawyers and ex-FCC enforcement personnel taking part in the discussion. The codes or coded messages mentioned above refer to codes meant to conceal meaning from listeners i.e. "Meet me a location sierra foxtrot and bring Cap'n Crunch with you." Combined with the fact that these milliwatt transceivers are permitted to be operated on CB frequencies under Part 15 rather than Part 95, I'd say CB Rule 12 becomes a non-issue.

But even if it weren't (a non-issue) ...

>{B} You may use your CB station to transmit a TONE SIGNAL only when
>the signal is used to make contact, or to continue
>communications (Examples: tone operated squelch, selective calling
>circuits). If the signal is an audible tone, it must last no
>longer than 15 seconds at one time. If the signal is a subaudible
>tone, it may be transmitted continuously only as long as you are
>talking.

I've never heard a dit or a dah that lasted longer than 15 seconds.

In any event the actual existence of FCC approved transceivers for the designed purpose of sending Morse code (...as opposed to generating CW) on CB frequencies makes this all kind of academic. (The exercise is kind of fun though.) The items you list above do preclude using a modified CB transmitter, export radio, or modified ham rig to generate CW on 11 meters. Thanks for the input and take it easy.

> www.cet.com/~sparky/cb15.htm

Some pretty good info, but there is an error in the Mismatch and SWR
section which is a very common misconception.

All of the power fed to a feedline from a transmitter is transmitted by
the antenna, regardless of SWR, except for an increase in
feedline attenuation over and above the matched-line attenuation. With
low loss coax, this extra attenuation is generally insignificant
unless the coax length is quite long.

Reflected power does not flow back into a transmitter or amplifier and
cause damage. Damage blamed on high SWR is caused by
improper output and coupling adjustments. Overheating is caused by
overcoupling and/or mistuned loading. Arc-overs are caused
by undercoupling.

Transmitters and amplifiers don't "see" an SWR - only an impedance. The
impedance is matchable if the transmitter has suitable
output and coupling adjustments, regardless of the SWR.

For more information, check out "Reflections II - Transmission Lines and
Antennas" by Walt Maxwell, W2DU at

I do not understand why the United States
permits public radio hosts to have
web sites like http://www.halturnershow.com .

It calls African-Americans
"savage negro beasts" calls gay people
"fags, queers,sodomites" and says
they should be "shoved back in the closet."
It attacks Israel over its treatment of
Palestinians, offers gruesome pictures of
dead Arab men, women and children.
It berates Chinese as "Canibals" by showing
pictures of adult Chinese eating a cooked,
aborted human baby. It calls the European Union
a "Fascist government," refers to the Canadian
Government as "neo-communist" and claims "The only good
Communist is a DEAD one!"

Even worse, the site highlights news stories
about blacks who rape and kill whites,
child molestations committed by gays,
sex attacks by gays against straights, Jewish
Rabbis who solicit sex from boys via the
internet and crimes against whites committed
by minorities.

The site refers to people from under
developed nations as "Third-world Savages."

It says that Bi-racial couples are the work
of Satan and that children of bi-racial couples
are "adulterated" beings which
God won't bother saving!

Please help me shut down this virulent hate site.
This man's radio show broadcasts to the entire

world. Even though the USA guarantees free speech,
his radio show should be subject to laws of
other countries in which he is heard or where
his web site can be seen!

I think the "children" need DCM marksmanship training.
They need to know how to strip and clean an AR-15/M-16/M1/any high power
rifle. Along with that they need to know basic firearms responsibiliy.
Upon completion of the DCM training the kids need to take a course on
understanding the Constitution of the United States of America. That way
they know that the enemy is not the kid down the street or their parents.
The enemy is anyone who would violate their oath of office and undermine the
intent of our Founding Fathers.
Lets try that for a generation and see what kind of society we end up with.

Found a few more errors ... sorry.

What Is A Conjugate Match?
A system is matched conjugately when there is maximum power transfer -
period.

How Can A Coax Radiate?
SWR does not cause coax to radiate. RF flowing on the outside of the
coax braid can cause coax to radiate, but this is completely unrelated to
SWR.

Where Should I Measure SWR?
Anywhere that is convenient between the transmitter/amp and the antenna.
SWR does not vary significantly along a feedline except due to the
effects of feedline loss, which are normally pretty small unless the coax
is lossy or the length is long. If SWR 'readings' vary along the
feedline, it normally means there is RF current flowing on the outside of
the coax. It can also mean that the SWR meter is defective, or is not
meant to be used with that particular impedance of coax.

Good luck and 73,

The plate dissipation is about heat, and is not the indicator of RF
power.

> I am repairing this for a duly licenced ham operator and I am a
>licenced Fcc Technician. Thank you for any assistance

If you were an FCC licensed technician then you would already know
that output power depends on many factors, such as the amplifier
class, the screen voltage, and the plate current. You would probably
find a better clue to the amps power hidden in the name of the amp --
"Swinger 205".

huh? Disregarding line loss, are you saying that all reflected power
eventually gets re-reflected back to the antenna?

>Reflected power does not flow back into a transmitter or amplifier and
>cause damage.

You bet it does! It may or may not cause damage, but it is dissipated
in the components of the output stage, usually the final and output
filter. This is why you will see SWR ratings on the datasheets for RF
power transistors, which gives an indication of how much reflected
power they are able to tolerate.

> Damage blamed on high SWR is caused by
>improper output and coupling adjustments. Overheating is caused by
>overcoupling and/or mistuned loading. Arc-overs are caused
>by undercoupling.

The faults you mention can indeed cause damage, and are closely
related to the issue. Overcoupling and/or mistuned loading inside the
transmitter are rarely the 'cause', but instead are usually the
'effect' of an external mismatch.

>Transmitters and amplifiers don't "see" an SWR - only an impedance.

I didn't say they "see an SWR."

> The
>impedance is matchable if the transmitter has suitable
>output and coupling adjustments, regardless of the SWR.

Yes, when the antenna is not matched, it changes the impedance of the
signal along coax. If you read my page again you will see that I have
already addressed this. And I also state that when you tune the
transmitter for the impedance of the signal at the transmitter/coax
connection it is called a 'conjugate match'.

>For more information, check out "Reflections II - Transmission Lines and
>Antennas" by Walt Maxwell, W2DU at
>http://www.wr6wr.com/reflections.html

I have not read this book. But I should mention that I have a BS in Electronics Engineering (specialized variation of Electrical Engineering) and twenty years of practical and professional experience. I have been repairing and restoring radio electronics in my own shop for over ten of those years, and I am currently a broadcast engineer. I may be a bit rusty on the specifics of theory, but I really think I know what is happening where RF is concerned.

A 'conjugate match' is a commonly misunderstood term, as is the term
'common-mode currents'. I added their definitions to clear up this
misunderstanding.

>How Can A Coax Radiate?
>SWR does not cause coax to radiate. RF flowing on the outside of the
>coax braid can cause coax to radiate, but this is completely unrelated to
>SWR.

The RF flows on the shield when containment fails, and containment
fails when the impedance of the signal deviates from the
characteristic impedance of the coax. The impedance of the signal
deviates from that of the coax when there are standing waves. There
are other reasons why RF can be found on the shield, such as
insufficient ground termination at the coax/antenna connection. Please
read more carefully.

>Where Should I Measure SWR?
>Anywhere that is convenient between the transmitter/amp and the antenna.
>SWR does not vary significantly along a feedline except due to the

>is lossy or the length is long.

Again disregarding line losses, SWR does not vary at all along the
coax, and neither does forward and reflected power. What changes is
the 'observed' SWR, which is a fault in the design of the meter.
Regardless, I posted the experiment so anyone can see the difference
for themselves. Try it.

> If SWR 'readings' vary along the
>feedline, it normally means there is RF current flowing on the outside of
>the coax.

Agreed, but you are confusing cause and effect.

> It can also mean that the SWR meter is defective, or is not
>meant to be used with that particular impedance of coax.

The SWR meter is defective in design only to the point that it is not intended to operate at any point along the coax that is convenient. Most manuals will instruct the operator to measure SWR at the antenna, where, BTW, coax impedance is irrelavent.

At 56 watts you have a good understanding of what this amp should put
out per tube in a safe and clean manner.. However the 6lq6 can put out
much more. Try 120 or so but don't expect the tubes to last to long.

The 6lq6 is getting rare and expensive. I'd personally try to off-load
a sweep tube amp as soon as possible because of this problem.

Just to clarify a couple points:

On Sun, 22 Jul 2001 22:30:02 GMT, sparky@cet.com (Frank Gilliland)
wrote:

>A 'conjugate match' is a commonly misunderstood term, as is the term
>'common-mode currents'. I added their definitions to clear up this
>misunderstanding.

By definition, a 'conjugate match' is where one component is matched
to the collective impedance -- or 'conjugate impedance' -- of two or
more components. I will add this definition to my page.

>Again disregarding line losses, SWR does not vary at all along the
>coax, and neither does forward and reflected power. What changes is
>the 'observed' SWR, which is a fault in the design of the meter.
>Regardless, I posted the experiment so anyone can see the difference
>for themselves. Try it.

Replace 'fault' with 'limitation'.

Hello PEAKABOO: Very impressive web site you have there.

http://www.geocities.com/MotorCity/Highway/5648/boos_page.html

Yes ok the small pulley, where would you get one. I have a bearing puller, vice and press for all that stuff.

Where do get all the wire and connection type lugs or connectors. I use to buy from Joe Factor Surplus Sales in Burbank, but they left town.

Very impressive, that the Alternator wire is almost as big in diameter as the heater hose. What wire gauge is that??????

I was going to mount the 200 LN Alternator on the truck, but I remembered that I all ready had a 150 amp alternator for the trucks electrical system, that ought to run it. So I'll put the 200 amp in the transportation truck, and have Steve make me up some pulley's and some brackets. He can do this stuff in his sleep. Hope the black grease, ohzooo, gooo, and crap from my unwashed hands, doesn't clog the keyboard here.

I noticed that when the 200 amp alternator is on line, at times I can hear it slip. So I tighten the belt, and it stops. But after a few weeks you half to retighten the belt again! I leave a pencil mark on the adjust-Oh-matic arm and have noticed that the belts seem to actually stretch over time. I have never broke a belt, but sure have had a mess of them come apart. Any comments?????

Jay in the Mojave

Not specifically, but I'm familiar with that type of amp.

> It is a
> bilaterial,grounded grid affair using dual 6lq6 sweep tubes.Tube manual
says
> max dissipation of the beam power 6lq6 is 28 watts.So is it approx 56
watts
> output?

No, that's simply a dissipation spec. There are no
tube manual specs for sweep tubes in RF amp service.
In RF amp service it's expected that the dissipation
will exceed the maximum, but the duty cycle is low
enough to where the reliability is acceptable.

> I am repairing this for a duly licenced ham operator and I am a
> licenced Fcc Technician. Thank you for any assistance

TV sweep tubes have low dissipation specs compared
to the peak output that they're capable of. Also, in
grounded grid you have to subtract 90% of the input
drive power in order to calculate the output that the
amp is providing. It's not uncommon to see 200 peak
watts (drive power included) per sweep tube when the
plate supply can hold the plates at 800 volts or more
under load and the amp is driven well into the gain
compressed region of its transfer characteristic. So,
much of how the amp will perform is dependant upon
the condition of the tubes, the condition and design
of the plate supply, and the drive level. Another thing
look for is biasing. The grids draw current, so don't
expect a fixed bias supply. Look at the cathode return.
The tubes have to be cut off during RX. The most
common method is to open the plate supply at one end
or another with a set of relay contacts. However, a better
but less reliable method is to switch in a high value
cathode resistor with a set of relay contacts. With
cathode bias/cutoff there is still enough resting current
to keep the plates warm and prevent the initial power
level dropoff that occurs during long RX periods when the
plate supply is open. To create a high/low power level
function, and to prevent overdrive in some cases, there
might be differing values of cathode resistance in the
form of actual resistors or zener diodes. If the output

is low yet the tubes are good, the plate supply is strong,
the output tank is resonant with a reasonably high Q, and
the input circuit is either resonant or free of excessive
resistance, look for full-time cathode resistors that have
been hot and have increased in value or an open zener
diode, or grid resistance added to create degenerative
feedback.

So, in a nutshell, if you're repairing it for a ham who will
operate it conservatively in an attempt to maximize the
reliability and spectral purity, I would say the face value
in peak watts using a typical 10 meter monobander as
the exciter is what you should expect. If the drive is low,
cathode and grid resistance aren't really required, and if
the drive is high (say a 100 watt HF rig), they will be
sources of repeated failures. So, my recommendation
is that all the grids are grounded, and that the only cathode
resistance is that which is switched in on RX to cut the
tubes off.

I hope this helps. If you have any other questions about
that amp, feel free to e-mail them to me. On this forum
many of the "kiddies" don't realize that most of the old
sweep tube amps were type accepted and were grand-
fathered when the more stringent rules went into effect.
They also may not realize that there is no license required
to repair ham and CB equipment. So, based on mis-
understanding, bias, envy, jealousy, etc., you're very
likely to receive many more useless responses than you
will helpful ones to a post like this.

Be reminded that you are pushing them into a non-linear portion of the
curve. That doesn't matter much, since sweep tubes are not known for
their linearity.

In a grounded-grid configuration, that causes some major 'chirp', and
is a good way to cook your grids. Are you maybe confusing 'grounded
grid' with 'grid leak biasing'?

> If the drive is low,

>output?

That is a great question and many do not understand sweep tube ratings. Your 6LQ6 does have 28 watts of plate dissapation when used in the horizontal output circuit of a TV. It switches on and off at a frequency of 15.734 KHZ to derive High Voltage for the Picture tube. It does this all as long as the TV is on. This is a continuous rating. When you use it in RF service it is for very short periods of time in comparison so specs can be exceeded without harm- especially in SSB where duty cycle is very low. Also cooling fans are typiacally used which allows the tubes to be used at even higher dissapation than rated. The way to calculate actual plate dissapation is using ohms power law (E x I). Take volts X amps. This will give you power input. Then subtract actual output power. This will be Pd or Power dissapated. Example- some common ham sweep tube amps use four tubes and run 1000 volts on the tube and are drawing 800 ma of current. This is 800 watts input power. The amps put out about 500 watts on SSB. The plate dissapation is 300 watts. Approximately 3 times the power rating of 4 sweep tubes. But in SSB the duty cycle is low, there is a cooling fan, and it is only used for a short period of time compared to TV viewing. I hope this helps explain sweep tube ratings a little better.
Have fun!

High SWR does not cause coax to radiate. How do you calculate the impedance
of a signal?

Since SWR does not vary along the line, except as noted above by both of us,
it does not matter where the SWR meter is placed. If the SWR 'readings' vary,
it is because of one of the items noted above, probably RF currents flowing on
the outside of the coax.

> Most manuals will instruct the operator to measure SWR at the antenna,
> where, BTW, coax impedance is irrelavent.

Why is coax impedance irrelevant at the antenna?

Thanks and 73,

Jim:

I wish they'd take that attitude with me, too.. I've been a CB'er for 25 years, and a HAM for a little over 2 months, yet the second I got my ticket (and let it be known here) people started treating me differently... as if I've changed.

Yes, guys, I still talk on CB, I also use 6M, 2M, 220, and 440 as well.

What? After saying that a safe output is 56 watts you advise the man
to try 120? What kind of self-destructive irresponsible advice is
this?

> The 6lq6 is getting rare and expensive. I'd personally try to off-load
> a sweep tube amp as soon as possible because of this problem.

Of course. After he's blown up his illegal CB amp by running too high
a power input you want he should "off load" it on some other sap. Nice
work, Tnom. You're a real asset to the group.

It opens lots of doors, most but not all marked 'Exit'. It happens to anyone who achieves anything as SSB is just discovering. Don't do well in school, don't act (insert in blank), don't pass exams or code tests, don't climb out of the cesspool. Always someone to keep you in that nice warm place in the middle of the herd.

Try searching on ebay. I don't see a model 61, but there are currently a
couple other very old models, and people put old radio shack stuff on ebay
constantly.

Well I was out of town for a few days but Im back now.

Some of the guys building alternators may not like this but here is THE source,

http://www.ennauto.com/

Every stator and rotor you will ever need and at builder prices.

For a 3cx3000a7 one 270 amp will suffice but 2 x 200 amp alts even better. you will need to make a three phase bridge with 6 brick 1.5 amp diodes. You can pick up 6 of them for about $50.00 next time you go to TRW. I will see if I can did up the part # for the group. One of the advantages of a AC is you dont need to lug all them batteries around. All you need is to light the filament 7.5 Volts @ 51.5 Amps. You will need one more alternator and couple of batteries with some high wattage resistors to drop the voltage down to a working voltage for the filament. I will see if I can did up the info on that as well. Actually perhaps we should start with a parts list and then go step by step.

this would work but you just wont get the balls out of it like a pair of 3 phase alternators. Thats the difference, 3 phase vs. single phase. I knew of a guy who ran a 3x3 with a 10 kw generator, he would bog it down at about 7.5 kW out of the 3cx3000 tube. a pair of 200 amp alts will bury a 10 kw slug in the corner.

Source record: 89589

Brainbuster <brainbuster@lineone.net> wrote:

: For the purpose of CB (this is rec.radio.cb) ....
: Which part of the system actually transmits the signal ?
: Exactly, the antenna.

Not necessarily. It can be a combination of the antenna and coax.

: So when you use your SWR meter, what are you testing ?
: Exactly, the antenna.

See above.

: So, regardless of reasons (phase, common mode signals, etc.), if your
: SWR reading is not due to reflection from your antenna alone, then
: surely it is false. If the purpose of the meter is to measure the reflection
: from the ANTENNA, then it (and the user) has surely been "fooled".

: If you want to know the reflection from the antenna, read it at the base of
: the antenna, with a very short lead (or double PL-259) from the antenna.
: This removes the worry of cable loss, phase, common mode currents, velocity
: factor, coax length, what the *~!# are all those circles, etc.

Wrong. It does not eliminate commonmode currents.

Not necessarily. If the antenna/coax impedance don't match, then there
are standing waves produced. The "signal" does not have an impedance.

Because of the way coax works, the current on the inside of the shield
must match the current on the center conductor.

There are at least 2 reasons why there may be common mode currents on
the coax. "Leakage" from one side of the antenna (or ground terminal)
onto the outside of the coax. Direct coupling of rf from the antenna
to the coax.

Um... The M16 uses the 5.56mm round, which is slightly larger, and has a bit more powder behind it... with a bolt conversion kit, it can use .223 longrifles, at much reduced range and accuracy. The AR-15/16 have a .223 barrel, or so I'm told, I've never fired one to be able to tell.

The M-14 uses the 7.62mm round, just as the AK-47/SKS do, and it has the added benefit of being made in the USA (unless you buy one of the Chinese knockoffs).

Not really, Bill... A properly resonant antenna with a proper feedpoint impedance isn't THAT hard to come by... most 1/4 wave groundplane antennae are easy to "match up" in this way, and it's not difficult (with a properly resonant antenna with a proper feedpoint impedance) to show that coax length, ignoring losses, does not matter in a single-radial system.

Changing the length of the coax does not change the feedpoint impedance of the antenna, nor does it change the antenna's resonant frequency. Checking the SWR AT THE ANTENNA is the only way to get an accurate idea of what the antenna is doing.

When the feedpoint impedance of the antenna and the resonant length of the antenna are equal to the exciter's (the radio's) output impedance and transmit frequency, the SWR at the antenna will be essentially the same as the SWR at the radio (line losses will change the SWR reading at the radio, but will not affect the SWR of the antenna).

When the feedpoint and output impedances are not equal, or when the resonant length of the antenna does not match the transmit frequency, the SWR at the antenna will differ from the SWR at the radio. The reason for this is that the complex impedance will invert when the wave inverts in the coax.

It's not really asking alot of the user to match their antenna at the antenna, so I really don't see what the problem is...

Nope, it doesn't work that way. For starters, if the coax is
completely open you have a mismatch condition, but you have no antenna
to radiate. Measure it with a field strength meter. Now if that didn't
fry your final, put your antenna back on and measure it again. Does
the antenna work better than an open-ended coax? Yep. If, as you say,
all the RF is radiated regardless of SWR, then the field strength
would remain constant. Not only that, but to say standing waves do not
affect radiated EM contradicts all the research in electromagnetics
since the days of Fermi, and doesn't shake loose any memories from all
the textbooks that I have ever studied. Maybe you should reference the
source of your information.

<taddanley@nospamatatt.net> wrote:

>High SWR does not cause coax to radiate.

Let's clarify terms: SWR is only a mathematical concept and causes
nothing -- standing waves are the problem. So let's break this down
and see where the problem is.

1. Coax works properly when all the RF conducts on the center
conductor, and it is all contained within the shield.

2. If the coax does not work properly, then all the RF does not
conduct on the center conductor, and it is not all contained within
the shield.

3. Standing waves create points of impedance (actually, it creates
waves of impedance) that are higher and lower than the characteristic
impedance of the coax.

4. Coax will not work properly using a signal impedance other than the
characteristic impedance of the coax.

5. RF that is not contained within the shield is inductively and
capacitively coupled to the shield.

6. RF that is coupled to the shield will cause the shield to conduct
RF.

7. If the shield conducts RF, some RF will radiate.

So which point do you disagree with? Like I said in my page, test it
for yourself with a field strength meter. This is a fact that has been
proven in the labs. Or just give Belden an email.

> How do you calculate the impedance
>of a signal?

I explained that in my page, just like I explained how standing waves
cause a coax to radiate. It is a very simple explanation, but then the
page was not written to discuss atomic theory or calculus.

Once again you are confusing cause and effect. Please read the page
again, and more carefully next time.

>> Most manuals will instruct the operator to measure SWR at the antenna,
>> where, BTW, coax impedance is irrelavent.
>
>Why is coax impedance irrelevant at the antenna?

Coax impedance is irrelevant at the antenna -when measuring reflected
power at the base of the antenna- because the reflected power is
measured before it has a chance to be directly affected by the coax.
It is relevant to the point that it can create the reflected waves in
the first place.

You didn't say this, but if you want to say that since the meter is
designed for 50 ohm coax, and it is off because it is reading a signal
where the standing wave creates an impedance of 16.5 or 150 ohms, then
I'll buy that -- it's not too far off from the facts.

Not only didn't you read my page, but you are way out in left field
with that statement. EVERY signal has an impedance. Standing waves are
created by the phase interaction of the forward and reflected signals,
both of which have an impedance. The result is an impedance that
varies between the sum and the difference of the two signals all along
the standing wave. Better go back and read your basics.

>Because of the way coax works, the current on the inside of the shield
>must match the current on the center conductor.

ONLY when the impedance of the signal is equal to the characteristic
impedance of the coax.

>There are at least 2 reasons why there may be common mode currents on

No, it means you can run the transmitter directly into the antenna,
eliminating the coax altogether, which will eliminate all the possible
problems of using a transmission line, as well as all the problems of
measuring SWR at the transmitter/coax connection. By reading SWR at
the antenna, the coax might as well not be there.

Good Luck to both of you. Given that you can't practice code more than an hour a day, pick up the Element 3 book and use it for bathroom reading.

Don't know how the VEs do things post-restructuring but the code test traditionally came first so while you are basking in success take Element 3 for the same $10 and you may walk out 'interim AG'.

RF currents flow equally on the center conductor and the inside of the shield. Is that what you are trying to say?

See my comments above.

What are 'waves of impedance'? Are you saying that SWR varies along the line?

> 4. Coax will not work properly using a signal impedance other than the

How do you measure the impedance of a signal? Does this 'impedance' vary along the line? At what point does the coax 'stop working properly'?

forging. Last I checked it was you and the other stooge using supernews.
I can guarantee you 3 things here, Scott, 1) I do not, and I never had a
supernews account and 2) The only thing you will ever find me doing at
1:30 in the morning is only what you wish you could be doing, but you

can't, so you are reduced to fantasizing about it and you sit here and play 'till the wee hours and 3) You may find some typos in my posts, but I assure you I would not spell the word "sanitize' incorrectly as was done. As a matter of FACT, it suspiciously resembles your repeated and incongruous spelling attempts, such as the errors I corrected in your QRZ page, among many others, as someone has already pointed out. If you will remember correctly, it was after you were bragging in one thread, of your education, that I questioned the validity of that education based on your erroneous use and frequent misspelling of one syllable words." □□□□□□□□□□

It boggles my mind to realize what I have done in the past 72 hours while you were sitting in front of your monitor freakin' obsessing on me.....oh well.

□□□□□□□□□□□□□□□

Dig it! Launched Friday AM 4:49 depart from Crystal River and head north along coast to Withlacoochie river which actually flows from the south into the Gulf at Yankeetown (love that name). Spent almost an hour throwing most back (except the 15 inch Ladyfish) and dodging raindrops. Had some mullet and squid, some smaller-than-I-like cutbait and not much else. Headed down (or up, depending on your point of view) river a small ways and it poured. We stopped and cast out near some shallows and I put the ladyfish on, alive, but gently wounded.

□□□□□□□□□□□

Talked to Mr. Widow Maker (Bluegrass) on the bowl as I was literally reaching for my rod holder which held a 7 foot custom Abu Garcia pole that was bent in half and the Penn 4000 was screaming. I set the drag and let it go. It took over 70 yards off the reel before I felt a pause. I set the hook. Fish on. 42 minutes later we had a six foot blacktip on deck. How's that for a small salt Penn and only 40 lb test? Went back to tell Mr. Widow Maker what was cooking for dinner and Supertronic said he'd pass it on for me. Conditions changed, but they were stronger. Said hello to Miss America in Va., Bounty Hunter in NC, and a few other I can't remember.

□□□□□□□□□□□□□□□

We headed inland and by 10:00 the sun was out and the river was unusually crowded for a weekday. Folks snorkeling and diving in the river not far from where dinner was caught. Killer mix of salt and fresh marine life here which makes it an abundantly rich fishing area.

□□□□□□□□□□□□□□□□□

Too many incompetent jet-skiers and several skippers who do not understand what "no wake" means and we had our fun for the day. It was 1:30, the wives were back at camp and we had a fair catch for the morning. Spent the rest of the day cutting up Jaws and getting the grill just right for one helluva an awesome fry of filet of blacktip, corn on the cob, fried bananas and boiled swamp cabbage with hot mustard.

□□□□□□□□□□

Turned on the mobile at about 8:15 PM right before we hit the sack. Now I heard everybody, but I knew where we were located (BIG trees) my signal wasn't going to get out.

□□□□□□□□□□□
Woke up at 3:15 AM and set out to the Homosassa Islands and worked some DX on SSB. Dropped lines by 4:00 and was asleep again by 4:15 (so I was told). Woke up at 5:00 and was told nothing was biting. The decision was made to head south to Weekie Wachee Springs. In the winter the Manatees are out every morning, occasionally in the summer. We docked and rented canoes at 9:00, went for a few swims, floated over the spring itself, and headed back to the boat. It was 1:00. We went back to the boat and headed back to camp.
□□□□□□□□□□
Had to get more ice to keep Jaws 'till we went home. Cooked lamb shish-ka-bobs on the grill and hung around camp until around 8 when the wives clamored for real city folk food. Drove into Crystal River (the town) and found a buffet/country-western style place. Chowed out, went back to camp and crashed hard. No cb.
□□□□□□□□□□
Woke up Sunday AM at 9:00 (half the day wasted already). Disgusted at myself for letting the morning marine feed pass me by, I stirred the ash from the campfire and figured might as well start breaking camp. Pulled out of Crystal River at 11:45 (after a huge breakfast, courtesy of Denny's) and headed home. Stopped and bought more ice for Jaws.
□□□□□□□□□□
Put it on Triple 0 over in Edna, TX, and he kept me company for about a half hour 'till that loud TENNESSEE WALKER with the mission control station at his disposal took over...I mean geez....high in the patch for over an hour straight? C'mon dude! Anyway, got my attention, not like I had much of a choice <g>!
Nutcracker was in there for a good solid hour and so was the Commander.
Life is good."
□□□□□□□□□□□□□
"And how was your weekend, Leland?"

news:7265-3B55CB64-13@storefull-121.iap.bryant.webtv.net... "What is a cotse header going to show, Leland? Exactly." Your just too chicken to post the link or message ID because you known you will be proved wrong.

Leland, beads of sweat originating from the plethora of Vicodin responsible for his all night irrational behaviors, pouring profusely from his twitching, furrowed, brow, cast off one final, self-serving plea to the group with:
And of course fingered again as the guility party.

"LMAO! Now that's a sad, pathetic attempt, but expected and predictable. You take a sentence of mine from a post you select at random that will fill your need, isolate it from it's thread, take it and apply it to whatever you make up as you go..as long as it's out of context and completely removed from it's original intent.....hahahha....poor dude..!"

Proziac to Twistedhed:
Twistie, Is Leland Talking to you?
  I don't think he is so why don't you put it wide to the side

"Hahah! Another who has a personal problem with speech, freedom, and being confronted."

  and take a stand by or your
gums still a flappin. And you guys want to blame doug, or frank or who ever for posting bullshit posts when again

"Got that right. You too, Leland."

  You do the exact same thing but worse.

"Hahahha! Puh-leeze. You stooges came in here and attempted some type of self-manifested coup that backfired and failed so miserably that the three or four of you cry daily, DAILY, over what was shoved right back at you. I love it."

Nothing cb or help related

"Sure it is, all day, everyday. It just slips under your nose because you're motives do not allow you to be part of it.
Besies, It was all cb related and helpful until stooges like you started your trash, and EVERYONE in this room agrees with that statement EXCEPT you stooges."

just a sarcastic post. Talk about get a life!

"I just gave you a few days of my life. Geez, you guys just want someone elses life. Can't blame ya'! You stooges lives suck. Ya' proved it."

Since you don't understand anything about legal electronics or otherwise you attempt to discredit him.

"I didn't attempt to discredit anyone. His ego and uncontrollable emotions got the better of himself and he made a stupid threat against the newsgroup because of his selfish ways and personable problems he can not control. Much in the same way he forged me in the hammie forum (which was the first indication of Leland's fondness for me) and was confronted by another that it was a forge, and man, did Leland wrongly yell about it's authenticity. Ask him about reading THOSE headers, since you choose to act as his (ahem) mouthpiece."

LOSER!

"I agree. It takes a low person to put their personal gain above the entire groups benefit, but I have pointed out his disdain for cbers many times before, only now it is much more illuminated, thanks to his temper"

pot=kettle=black

"Yea, I said that, too. I am quite used to your adoration, homage, imitation, plagiarizm, etc. It appears I am one of the only few left that has the patience to deal with you and educate you at the same time. So be it."

□□□□□□□"But, it did stop the flooding. That can't be denied".....in response to KC8LDO's assertion that reporting a porn posting flooder in rec.radio.cb did no good.

Subject: Re: FCC's Riley is coming. Oh Yea
Newsgroups: rec.radio.cb
Date: 1999/11/08
I will avoid personal attacks like the ones you have posted calling some
one "son". This is a direct conflict with what these postings are
SUPPOSED to be about. I will abide with the issue at hand. I
find myself quite amused that you take what you hear and read quite
literally. I have been investigating the Feds. underhanded dealings
concerning global communications for almost a year, as part of my
studies devoted to journalism.
  Have you ever heard of spin? Propaganda? The FCC is inundated with
such high-tech crimes such as cellular cloning and computer related
crimes. What you are hearing and reading is complete hyberbole and spin.
Simply put, this is another political maneuver to get the cash flowig.
It has absolutely nothing to do with enforcement of radio. I now what he
has said he was going to do. I know he is going to streamline,
reorganize, etc. Pure hype. This is akin to a politician telling his
costituents what they want to hear to pacify their whetted appetites to
appease the here-and-now. You are welcome to believe whatever you like.
Take it from somene who has been denied countless interviews, granted a
few, and no-commented to- death when it comes to who really is in charge
at the FCC. If you believe it's saviour time, you have one hell of a
wake-up call pending you my friend. I can supply you with hundreds of
hours of interviews from the NSAs covert Echelon global spy
communications system(monitors ALL modes of communication for "key"
words) clear down to the FCCs local, regional and National Directors
comments. Who you think is in charge isn't, and what you think will take
place, won't. The resources simply are not there and congress' pending
vote on the current bill is unlikely to gather the muster to pass. Even
if it does, the allocation of funds is the equivalent of just a few

dozen or so added employees. No, your messiah is a false god. What will likely take place SOMETIME in the future, is that local municipalities will be given the jurisdiction of enforcing their own areas. But this is old news. Like I said, you are free to believe what you like and no one will think ill of you for it. But these are the facts. It is my profession and my passion to educate the public.(I am a writer) Especially when it comes to Big Brothers Bull. There are many avenues for you to obtain the true information on what is truly taking place. Unfortunately, the gentleman who now claims he holds the reigns at the FCC has not the power or the status that you so graciously allow him. But with a few more posts like yours, I am sure that "Camelot" is just over that next hill...

"Heheh! Off your knees and stop apologizing. Hehehe..I ought to feel special, I had an apology from the entire anti posse in the last 4 days..hehehehe! Now I am being advertised from 99? You dig and dig (I thought that was Leland and Sparky's job) and you did exactly what Leland did. You take a post 2 years old and apply it to a post I made to some one else two years later and claim some type relevancy? Hahahha! I don't understand. If you are referring to the "liar" quote, if one lies, one is a liar. No name calling, just fact. You may rise, also. Dirty knees and all with all these apologies I get from you stooges. What else can I educate you on Zeb? Interested in learning about Echelon? There exist several Echelon articles that contain my byline. Have at it, son.
  And before you ask, I called you son because of the juvenile timing of your posts. Leland schooled you well. See, Leland sucker punches me every weekend. He knows I take off and enjoy life on weekends, and for some reason that also enrages him (maybe 'cause he is ignored when I am not here? He quit posting as himself after Friday and used aliases all weekend) and since you are so fond of going back through old posts (2 years, now impress me) check back and see how Leland's posts concerning me are always escalated on the weekends...as I said, a perfect analogy is the classic sucker punch. But it's nice to know I occupy his highly unproductive and idle thoughts. Comes with the the territory, I found."

wrote:
Hello Frank: These guys answered you about the same way I would have.
They did good.
I work too many hours to be here all time, there was just ah hepin out!

Wonderful. Then you should be able to supply all the proof

"LMAO! You are such a putz. You would like to change the subject
whenever one calls you on anything. Sorry, popcorn boy, this is about
you, and if anyione has made threats, it's you and leland. Still beside
myself that all you did all weekend was pray to me..heheheh!"

ot twisties accusations, like I am Glenn Sparks, Leland, Doug, N7VCF,
and BigBen. And you should be able to name those publications he writes
for.

"HAHHAHAHHAHAHAHAHAH! You are truly one sad, pathetic individual. Still
trying to hang on my life's tail. Step back, relax, and try not to say
anything stupid in anger like Leland does. It just eats at you to know I
do something that has apparently been an impossible fantasy of yours for
some time, judging by the importance you place on what I
do..hahaha..this gets better everyday. You want, no, you need
information on me so bad, but did you ever stop to analyze WHY? Ahaha!
You poor, poor, man!"

Does this also mean that you are going to take responsibility for his
forgings and spam? How about his threats as 1mangang?

"I wasn't one man gang, but you are too mentally challenged to realize
there were actually 3 of them. When it was exhibited how bad Dogie went
nuts over him, another appeared, then still another, all variations. Now
it appears this "gang" fellow permanently damaged your psyche along with
Dogies...he certainly left his mark and impression upon you two. Good
deal, 2 with one stone, and quite effortless."

I have suggested that you don't step into this, but you seem really
eager to mix it up. Fine

"Damn right it's fine. It's downright hilarious to watch you beg for
anything from me or about me. You truly are beneath all here Sparky,
that's not ego, junior, that's fact. You have spoke of beng subjective
in the past (which is malarkey), I suggest you take a weekend off then
return and reread your posts begging to see my work. I believe you would
be surprised by the sheer number of posts you made begging for this. You

don't even have the good enough sense to be embarrassed by it. As someone else alluded, you're wrapped around the axle just a bit too tight. God, I love this group!!"

"Did I tell you about the conditions this weekend, Sparky? Absolutely astounding. I also asked "Lost in Pa." what channel he hangs on and he lied, so I couln't talk to him this week, but I bumped it on many good folk this weekend, bowl AND 555."

5484. FRAUD ALERT:Beware Cbbase on eBay is now Turkeyseller

Newsgroup: rec.radio.cb
Date: 2001-07-23 17:00:06 UTC
From: sky444nospam@mint.net
Message-ID: <3b5c575a.45700212@news.mint.net>
Source record: 89474

Beware sellers cbbcase has changed from that to
turkeyseller.....bidding on all the auctions of people that gave
bad feedback..ebay has been notified...and also earthlink has been
notified about the mailbombs.....

Date sent: Mon, 23 Jul 2001 09:07:41 -0700 (PDT)
To: sky444@mint.net
Subject: Re: MAIL BOMBS
From: EarthLink Abuse Department
<abuse@earthlink.net>
****** This an automatic response to confirm that we have received
your
******
****** recent report regarding a Network Abuse or Security incident

******
****** involving an earthlink.net or sprintmail.com member, and are

******
****** taking the following actions to resolve the issue:

******

action in accordance with our
policies
will be taken against the offending account immediately.

ebay safeharbor::::::

I have a sneaking
suspicion this person has changed there ID to Turkeyseller and
again is bidding on one of my auctions with the intention of not
paying....here's why I think this:If you check Turkeysellers bids
right now this person is bidding on Items listed by the same people
that left Cbbase (check the feedback and compare to the
negatives)negative feedback after they refused to pay,the person is
also bidding what I consider ridiculous bids on items that are not
even close to being worth what they are bidding,I might be wrong
but my feeling is that Turkey seller and CBbase are one in the
same...this is the last message I will send to you concerning this
matter and I apologize for being what you might consider
impatient,but I am a little tired of digging through thousands upon
thousands of mail bomb messages to get to my mail...all because
I did what ebay is based on and left them negative feedback,and
then to top it all off after all this the negative feedback that they
posted cannot be changed,when it never should have been posted

in the 1st place,I appreciate your response telling me my response was proper and to the point,but a negative is a negative in the eyes of the bidders..thanks for you time and if your interested,I forgot I did save the information on this person.....it is:

Carl does this with his programs to keep them from being copied thinking
that it is cheaper to send a reg'd owner a new CD when a new install is
needed than have his program copied and bootlegged. I can see his reason for
this but I also don't agree with it.

Isn't Ebay great? I see so many stories about leaving negative
feedback and then getting flamed for it. It has gotten so that
the only thing you can do is take the loss, and re-list the item
without saying a word. I have had them flat out threaten me if
I gave them bad feedback, they would do this or that to me.

As far as excuses not to pay,
I have heard them all. From "the transmission
just went out of my car" to "I didn't know what I was buying".
(Kind of amusing when you have four pics and a detailed description,
huh?) Pretty sad state of affairs.

My best (worst) Ebay experience was when I sold a MINT D201
to a guy who said it was damaged in shipping (it wasn't) and I
sent him a refund and he sent it back so I could make a claim
with the USPS for damage. It came back with NO TUBES in it
and it looked like he took a hammer and busted the faces of the
meters out. I had to give the PO the radio and I did get my money
out of insurance, but it was the principle of the thing. That asshole
got a complete set of tubes for nothing. USPS didn't even want to
talk about it, they just paid me.

You have to be REALLY careful when dealing on the bay these days.
It's not like it used to be when it first started.

news:26454-3B5C3F68-224@storefull-127.iap.bryant.webtv.net...
"Same WHAT as before?"

It is really strange Twisted the last thing that shows up on two separate news groups, at the start of the past weekend, is a phony post where ".cotse" appears in the header path. I never mentioned anywhere exactly what would be found, but you seem to know right away because you mentioned it by name first. (See quote below). Then you proceeded to do your thing, and posted a phony message by another person that has been on your case lately. To further point the finger of suspicion in your direction I haven't had any problem with the person whom the message was made to appear to originate from. Given the contents of that message the only person whose agenda would be perfectly severed by the post was yours Twisted.

And as of right now I count 5 different threads you have started, just today only. All concerning in one way or another means to cover up your lies, or accuse people of doing you wrong. As I had alluded to before Twisted if you chose to keep this up the news group may once again find itself awash in various posts with you being the central topic. As I remember it people were just as happy to send your ISP complaints as several others to get you to shut up.

You are doing the same thing as before, accusing people of different things, then being unable to prove anything. When you're called to prove your point you just wimp out, and duck the question. I asked you point blank to post your proof as outlined in my last reply to you in the "Hey Twist" tread. Instead you took the coward's way out, and just let the thread hang there, refusing to respond.

You like to go around and point the finger Twisted, but you just can't do any better by backing up your claims. In that department you're a total loser.

Maybe I am going about this wrong. The current TRC-61 DOES work but it is dirty, the transmission key sticks, the mike cord (which also handles the tuner-in-mike tuner) cover is torn and crimped and it has been subject to about 25 years of moisture (mounted under the seat in a leaky convertible) any ideas on a cheap rehab? Thanks.

> Oops, I didn't realize. I'm actually in Canada...

The USA and Canada regulations for CB radio are nearly the same. No license required, and the contents of what is discussed on the air can be nearly anything. The range you can expect to get normally is rather limited since all communication has to be from one station directly to another. External power amplifiers are not permitted, and no repeater stations exist to extend the range of a low power hand held radio either.

Ham Radio is a different story. There are differences between Ham Radio in the USA and Canada so you need to check the addresses below for more info on Ham Radio operation and licensing in your country. The "Basic" class of license is so easy to get the even kids as young as 10 years old get licensed. The Canadian "Basic" license class is much like the USA no-code Tech license class except your limited to some what lower power levels and a few other minor differences.

I would have to agree with another poster and recommend getting a "Basic" class license. That way you can take advantage of using the many repeaters around the country to provide easy and clear communications using a small hand held radio.

What you want does not exist. Rethink your needs and opt for a mobiel that will run off the cigarette plug with a magnetic mount antenna and it might get you five miles. A hand held won't stand a chance of this.

aries wrote:

Source record: 89490

What use do you intend for it? If hooked to an external antenna, it may serve you well. If you are looking for communications with another handheld (such as hunting), you may be better served with an FRS radio. Antennas at 27 MHz on a handheld are VERY inefficient. The ground (capacitive coupling to your hand and body) is also very inefficient. A coworker of mine bought a couple of FRS radios so his wife could drive the car whilst he drove the truck pulling the boat and remain in touch with each other. He said he got good range (from INSIDE the vehicles no less!) ... over half a mile (sufficient for what he needed). Outside the vehicles, of course, the range was much better. If you want to talk to a lot of people, you might be better served with a good mobile or base installation, although an external antenna will help a LOT. Then again, if you need a lot of range and a handheld, you might consider getting your tech amateur license. My range on 6 aa batteries is a good 15 to 20 miles to any of several repeaters; from there the range extends another 40 or 50 miles in all directions. A couple of presses of the touch tone keyboard and I'm into the local phone system. We are currently looking into getting the local 750 repeater connected to the internet - once done, a couple of keypresses can connect with any of dozens of similarly equipped repeaters in the US and Canada. Sooo ... I can be out hiking in Rochester, NY, and talk with someone in Alaska.

Ok, we're splitting hairs here.
I believe the .223/5.56 NATO as well as the 7.62x39 are considered "medium power" rounds.
The M1 Garand used the good ol' fasioned 30-06. And I believe the M1-A and the M14 used 308 (7.62 NATO).
I don't know about the SKS but, the AR15 is acceptable in a high power rifle competition.
In any event, marksmanship training was my point. Just set them up with some old Springfields like grampa used. That would be fine.
When a government fears the people, we have liberty. When the people fear their government (BATF, IRS, FBI, CIA, NSA, EPA, NAACP, SPCA...etc.), we have tyranny.

The link you provided (several times -- I read it the first time) is a
page selling the book. There are no references there. If you want, I
can provide you a list of over twenty books that I personally own, and
probably several I don't, that state the reflected power is dissipated
in the source. Have you tried the public library lately?

>
>What are 'waves of impedance'? Are you saying that SWR varies along the line?

You did read the page, didn't you? As per the example, the impedance
changes along the transmission line, and can be anything from 150 ohms
to 16.5 ohms depending on the distance from the point of mismatch. And
no, I am not saying that SWR varies along the line, since I have said
several times that it doesn't. IMPEDANCE varies along the line due to
standing waves.

>> 4. Coax will not work properly using a signal impedance other than the
>> characteristic impedance of the coax.
>

>How do you measure the impedance of a signal? Does this 'impedance' vary along the
>line? At what point does the coax 'stop working properly'?

Why do I need to repeat these answers over and over? All three
questions have been answered before.

OK, one more time:

>How do you measure the impedance of a signal?

From the page: "Because of this relationship, the term 'impedance' is
often used to describe the ratio of voltage to current. So a signal
with an impedance of 10 ohms will show 10 volts for every ampere of
current."

> Does this 'impedance' vary along the line?

As stated in the page and two previous replies to your posts, standing
waves create varying impedance along the coax. The answer is 'yes'.

>At what point does the coax 'stop working properly'?

As stated in the page and two previous replies to your posts, when the
impedance of the signal is no longer equal to the characteristic
impedance of the coax.

If you have any more questions, please read the page or my posts to
see if I have already answered it.

eBay isn't the only place where this sort of crap takes place. I've listed radios for sale on a couple of well-known swap pages and a couple of scanner newsgroups and had flakes to deal with there also. The prospective buyer emails you and says they want to buy a certain radio, you go through the negotiation process and tell the buyer where to send payment, and then they don't follow through. Makes one wonder why these turkeys even bother to email a seller in the first place if they don't intend to complete the deal.

5517. SWR & Transmission Lines Q & A

Newsgroup: rec.radio.cb
Date: 2001-07-23 23:06:09 UTC
From: Helmet Sweeny <hell@sween.com>
Message-ID: <B5277.20939$EP6.5245503@news1.rdc2.pa.home.com>
Source record: 89606

The measurement of standing waves on a transmission line yields information about equipment operating conditions. Maximum power is absorbed by the load when ZL = Z0. If a line has no standing waves, the termination for that line is correct and maximum power transfer takes place.

Characteristic Impedance, Z0, is the ratio of E to I at every point along the line. For maximum transfer of electrical power, the characteristic impedance and load impedance must be matched.
A transmission line that is not terminated in its characteristic impedance is said to be FINITE.

A transmission line is either electrically LONG or SHORT if its physical length is not equal to 1/4l for the frequency it is to carry.

CHARACTERISTIC IMPEDANCE, Z0, is the ratio of E to I at every point along the line. For maximum transfer of electrical power, the characteristic impedance and load impedance must be matched.

A transmission line that is not terminated in its characteristic impedance is said to be FINITE.

A NONRESONANT line has NO STANDING WAVES of current and voltage and is either infinitely long or terminated in its characteristic impedance.

A RESONANT line has STANDING WAVES of current and voltage and is of finite length and is NOT terminated in its characteristic impedance.

Questions:

1) A nonresonant line is a line that has no standing waves of current and voltage on it and is considered to be flat. Why is this true?

2) On an open line, the voltage and impedance are maximum at what points on the line?

3) At what point on an open-circuited rf line do voltage peaks occur?

4) A transmission line is either electrically LONG or SHORT if its physical length is not equal to 1/4l for the frequency it is to carry

Yes I have tried the public library, in fact that is where I found the first edition of Walt's book. Unfortunately, I don't have my current copy here, it is in the office. I will get it and let you know what sources Walt sites, besides his own research. Some additional information is available at http://www.iag.net/~w2du/

Which of your sources explain 'waves of impedance', or how you measure the impedance of a signal?

Good luck and 73,

Helmet, So what you are trying to say is that if you had a 1/2 wave length or multiple there of the impedance you see at the load will repeat at the source and that other points along the line there will be different spots of voltage/current minimum/maximum.

Very informative link.

The line is said to be 'flat'.

>Characteristic Impedance, Z0, is the ratio of E to I at every point along
>the line.

The characteristic impedance of a transmission line is the
instantaneous network impedance that is maintained along the length of
a transmission line. It's not the same thing.

> For maximum transfer of electrical power, the characteristic
>impedance and load impedance must be matched.

Ok.

>A transmission line that is not terminated in its characteristic impedance
>is said to be FINITE.

I have never heard that before, but ok.

>A transmission line is either electrically LONG or SHORT if its physical
>length is not equal to 1/4l for the frequency it is to carry.

A transmission line is not an antenna. There is no 'electrically LONG
or SHORT', unless you are talking about stubs or some other resonant
use of transmission line. But transmission line is intended to be
non-resonant.

>A NONRESONANT line has NO STANDING WAVES of current and voltage and is
>either infinitely long or terminated in its characteristic impedance.
>
>A RESONANT line has STANDING WAVES of current and voltage and is of finite
>length and is NOT terminated in its characteristic impedance.

I think you are mixed up here. You seem to be confusing resonance with
standing waves.

>Questions:
>
>1) A nonresonant line is a line that has no standing waves of current and
>voltage on it and is considered to be flat. Why is this true?

Because a transmission line is not intended to resonate.

>2) On an open line, the voltage and impedance are maximum at what points on
>the line?

The voltage is at it's maximum and the current at it's minumum at the
open, and at every half-wave back from that point.

>3) At what point on an open-circuited rf line do voltage peaks occur?

See above.

>4) A transmission line is either electrically LONG or SHORT if its physical
>length is not equal to 1/4l for the frequency it is to carry

Like I said, you are confusing resonance and standing waves. Standing
waves are nothing more than the phase interaction between forward and
reflected power. If transmission lines were resonant devices, they
would be frequency-specific, but they are not (stubs excluded). It
makes no difference how long a line is (disregarding line
attenuation): the forward power doesn't change, the reflected power
(if any) doesn't change, and the resulting standing wave peaks will
always occur at the same places along the line from the point of
reflection. The only things that change are the length of the line and
the subsequent change of impedance at the feedpoint.

Holy Cow!!! No wonder you are confused! This guy is trying to rewrite
the entire field, throwing away every credible source of information
that even slightly disagrees with his rants, incuding the ARRL and
IEEE! Only some of the fundamentals are referenced, the rest is pure
unsupported speculation (read: BS) on his part.

I am definately going to get that book sooner or later just for
laughs. In the meantime, if you want to learn about RF the -right-
way, stay off the internet, spend a day at the library, and don't read
anything that doesn't have a college or university underneath the
author's name.

>Which of your sources explain 'waves of impedance',

If you plot the impedance of the signal at points along the
transmission line, the plot will show a wave. This wave does not move.
The phrase 'waves of impedance' was my own interpretation, but since
it can be misleading, I will not use it again.

> or how you measure the
>impedance of a signal?

For the fourth time, the impedance of a signal it the ratio of voltage
to current. It is in almost every book you will read on the subject;
except, perhaps, Walt's book.

It is useful to note that input impedance Zo varies periodically with
distance l. The maxima and minima of Zin occur at the maxima and minima of
the voltage and current standing waves.

ah seven, you can use a power converter for the filament. at about 400 watts for the filament voltage, which is very critical for tube life. for the 3000 a7, the filament voltage should be within + or - 5% or so. i think this way is better than the use of high wattage resistors but each his own. also you have the blower motor which is 110 volts also, so you have to figure it in with the power requirements for the converter. heck just get one at about 1,500 watts and you can't go wrong. also you can use the 110 volts to power up relays etc, etc.... you use one alt for this and the driver....just a thought.......

Yes I have heard of this done. Where can I find a inverter that I can dial
in the voltage? this would be good for regulation indeed.

IRLP is here in Australia, going great in all states except here in
Victoria. Today we were instructed to shut our node down for legal reasons!

The WIA Vic has declared it ILLEGAL!
1: Callsign ID
2: Un-attended transmissions (even though there are exceptions for computer
controlled devices)
3: links are not permitted below 420 MHz (they say it is a link up to the
repeater on the user freq! and we are currently on 2M)
4: They want a Repeater callsign for the node!
5: Any other excuse they can think up to prevent it from being on air!

I have been instructed to go and dismantle the IRLP node in Melbourne today
: (

I wish it could stay on air, but I have no choice in the matter. Although I
believe there are ongoing negotiations with other Amateurs, WIA Vic, WIA
Federal (who are in favour of IRLP) and the ACA so hopefully it may go back
on air in the future.

Also brush-less, and up to 450 amps output. Hell of an alternator with one
hell of a price tag!

Peace

I have a couple of those. What are you referencing? Start with Sadiku.

These guys are 35 miles from me. A good connection if you are the line of large alternators or repair of your own alternators.

Hey Gettaway, why not use a high current regulator to step the voltage down (or up if the going gets rough) to regulate the fil voltage? You can also get a 6 volt alternator and battery bank.

5542. Use Caution With Yellow Strobe Lights

Newsgroup: rec.radio.cb
Date: 2001-07-24 03:27:22 UTC
From: qrm2000@aol.com
Message-ID: <20010723232722.23760.00000916@ng-cm1.aol.com>
Source record: 89632

In a recent on-the-air training session for SKYWARN participants, the following was conveyed by Sgt. Jeff Winstead of the NC Highway Patrol:

When a vehicle is on the shoulder of the highway and has a strobe light activated, it creates what is known as the "moth effect". Simply put, motorists steer in the direction they are looking. So if you catch and hold a driver's attention with a blinking light, there is a chance they will drive into your automobile.

Sgt. Winstead said that several law enforcement vehicles per month are struck in this manner.

In North Carolina (and some other states), REACT members are authorized to use yellow lights. (SKYWARN is not authorized to use such devices). It is important that everyone be aware of the "moth effect". Make every effort to keep your car and yourself out of danger when assisting on a road's shoulder.

In addition to the physical danger, there is a great risk of a civil suit against you if your state does NOT permit you to use such emergency lighting for your activities and your car is hit by another driver. You can expect a diligent legal team to pick up on this and blame you for enticing the other driver by using an unauthorized device.

Our SKYWARN group (some of which carry yellow lights on roof bars), resolved that we would not stop along roadsides for SKYWARN activities. In our state, we are not "storm chasers". We will drive to a safe spot (such as a commercial or church parking lot), make our observations and reports, and then drive to the next spot. We will NOT make our observations while parked alongside a highway on the shoulder.

Hope this is helpful to any REACT readers.

73,
QRM

why not regulate the 14-16 volt charging system of the car down to 7.5 v .
mucho easier i think.

You should be able to find the LED's at a good warehouse, I was getting mine at A-1 untill the vegas show then I stopped dealing with them. But you can find them, I stock them for the cobra 25, 29 and 148. Also they come in green and red.

I have found a better place for radio stuff than ebay, that's if you are selling stuff. This place don't charge to place a listing, I've sold a few things there and didn't have any hassle as compaired to ebay. Try this place.... http://www.bidfind.com/cobids/cobids.cgi?siteid=cbbf1729

Since you state you are restoring a 70's vehicle, and since the CB was not
a factory item, why not just take it out and junk it, the car will be
closer to original equipment specs without it.

Anyone familiar with the Yaesu Ft101? I keep getting a crackling type POP sound every 1 1/2 seconds on most bands. It seems to fade in and out slightly but, always there. And in AM mode, I notice a POP sound at the beginning of a strong signal transmission. Any guesses? Maybe some filter prob.?
Any help appreciated.
Bob

I believe most foreign makes use amber directional signals (i.e. yellow hazard lights).
Could be another reason to buy American made cars.

Sideband <sideband@spam.me.not> wrote:
: Not really, Bill... A properly resonant antenna with a proper feedpoint
: impedance isn't THAT hard to come by... most 1/4 wave groundplane
: antennae are easy to "match up" in this way, and it's not difficult
: (with a properly resonant antenna with a proper feedpoint impedance) to
: show that coax length, ignoring losses, does not matter in a
: single-radial system.

Even if the feed point impedance does not change, check out what happens to the ground loss as you vary the height of that antenna above the ground. It is easy to design an antenna to fit specific conditions. It is not so easy to do so for the general case.

Even if the antenna is resonant, and there are no standing waves, you can still have a fair amount of rf current on the outside of the feedline. This means that the whole system, including the coax, is part of the antenna.

The only way to eliminate this is to choke off any stray currents on the coax.

: Changing the length of the coax does not change the feedpoint impedance
: of the antenna, nor does it change the antenna's resonant frequency.

See above.

: Checking the SWR AT THE ANTENNA is the only way to get an accurate idea
: of what the antenna is doing.

See above.

: When the feedpoint impedance of the antenna and the resonant length of
: the antenna are equal to the exciter's (the radio's) output impedance
: and transmit frequency, the SWR at the antenna will be essentially the
: same as the SWR at the radio (line losses will change the SWR reading at
: the radio, but will not affect the SWR of the antenna).

The output impedance of the exciter is immaterial. All that affects is how well the transmitter couples into the feedline.

See above about feedline length.

: When the feedpoint and output impedances are not equal, or when the
: resonant length of the antenna does not match the transmit frequency,
: the SWR at the antenna will differ from the SWR at the radio. The reason
: for this is that the complex impedance will invert when the wave inverts
: in the coax.

See above about feedpoint impedances.

: It's not really asking alot of the user to match their antenna at the
: antenna, so I really don't see what the problem is...

I think you mean "antenna to the coax".

That will give you a 1:1 SWR, but that does not guarantee that the antenna is resonant.

You can argue all you want. I do this stuff for a living. I will rely on my practical experiences, which happen to exactly match what transmission line theory says will happen.

:>Frank Gilliland wrote:
: <snip>
:>> huh? Disregarding line loss, are you saying that all reflected power
:>> eventually gets re-reflected back to the antenna?
:>
:>Yes.

: Nope, it doesn't work that way. For starters, if the coax is
: completely open you have a mismatch condition, but you have no antenna
: to radiate. Measure it with a field strength meter. Now if that didn't
: fry your final, put your antenna back on and measure it again. Does

It doesn't matter. Put a matching device in line between the transmitter
and coax, if you wish. With that open coax, with the theoretically
infinite SWR, all the power is lost as line loss.

: the antenna work better than an open-ended coax? Yep. If, as you say,
: all the RF is radiated regardless of SWR, then the field strength
: would remain constant. Not only that, but to say standing waves do not

You are ignoring line loss here - as well as antenna efficiency.

: affect radiated EM contradicts all the research in electromagnetics
: since the days of Fermi, and doesn't shake loose any memories from all
: the textbooks that I have ever studied. Maybe you should reference the
: source of your information.

SWR does not affect the radiated EM - excpet for the level that gets into
the antenna.

I don't think we really disagree in principle, only in how to interpret
the details of the various claims.

Frank Gilliland <sparky@cet.com> wrote:

:>:>Reflected power does not flow back into a transmitter or amplifier and
:>:>cause damage.
:>
:>: You bet it does! It may or may not cause damage, but it is dissipated
:>: in the components of the output stage, usually the final and output
:>: filter. This is why you will see SWR ratings on the datasheets for RF
:>: power transistors, which gives an indication of how much reflected
:>: power they are able to tolerate.
:>
:>Wrong. He is correct. Or, more currectly - the mistuning/miscoupling
:>cause the amp to operate at a lower efficiency than designed. This
:>means that more heat is disipated in the finals - too much and they
:>cook.

: You just described how the reflected power is dissipated in the
: transmitter -- sort of.

No. I described the consequences of the mismatch that the transmitter
sees at its output.

Here is a simple illustration:

Assume that you have a transmitter that outputs 100 watts into a
perfectly matched antenna/coax. If you measure the power levels
at the antenna, you see 100 watts forward and 0 watts reflected.

In all cases, we will assume that there are no rf currents on the
outside of the coax to confuse the simple case. We will also assume
that the coax is short enough to not cause significant transmission
line loss. Lastly, we are assuming that the transmitter can be
retuned to match the impedance it sees at the input of the coax.

Now, change the antenna tuning to cause some SWR level to appear.
Let us pretend that this produces a reflected power reading at the
antenna of 10 watts. What forward wattage do you see? You will
see 110 watts.

With a simple test setup, you can verify this.

:>: broadcast engineer. I may be a bit rusty on the specifics of theory,
:>: but I really think I know what is happening where RF is concerned.
:>
:>I wouldn't bet on it. Many RF engineers don't.

: I would say that most RF engineers know what's going on better than
: many hams and CBers.

Agreed - probably more than most Hams and CBers.

:>onto the outside of the coax. Direct coupling of rf from the antenna
:>to the coax.

: And both are the result of insufficient grounding, as I stated in my
: page. Did you even read it?

See above about your cage.

Sufficient grounding may have nothing to do with it. For example, feeding
a dipole with coax means you are feeding a balanced load (hopefully) with
an unbalanced source. Because of this, unless you take precautions, some
of the current from the inside of the shield will travel on one leg of
the antenna and the rest will travel on the outside of the coax. It does
not matter of the transmitter is grounded or not.

The same is true for coupling of rf from the antenna to the coax.

If you put a matching device on an open coax to make the coax part of
a resonant circuit, then it is no longer working as a transmission
line, but rather as an antenna. That's not the issue.

>: the antenna work better than an open-ended coax? Yep. If, as you say,

If by 'line loss' you mean the normal attenuation per parsec, then yes
I am ignoring it because it is not a variable. Since there is no
antenna on an open coax, the antenna efficiency is moot as well. Let's
not try to compound this issue.

>: affect radiated EM contradicts all the research in electromagnetics

>
>I don't think we really disagree in principle, only in how to interpret
>the details of the various claims.

I think we do disagree on one basic principle -- the fate of reflected
power.

Here's my illustration:

Given: a tube final, and an output tank converting, say, a 3000 ohm
plate impedance to 50 ohms at the coax. Create a mismatch at the
antenna. The reflected power will change the input impedance of the

coax (unless it happens to fall directly at the 50 ohm point, which doesn't happen too often, hence it will be disregarded here). This change of impedance is going to be proportional to the reflected power, and it will be either directly or inversely proportional depending on the phase interaction of the forward and reflected power at the coax feedpoint.

Now since the tank is a frequency-dependent impedance matching device, when you change it's load you detune the tank. What happens to plate current when you detune your tank? It goes up, right? What happens to plate dissipation when you increase the plate current? It goes up, right? How much you wanna bet that the additional plate dissipation is a number that is close to the reflected power?

That's just one way reflected power is dissipated in the transmitter.

>see 110 watts.
>
>With a simple test setup, you can verify this.

It will only show 100 watts regardless of reflected power, and I have verified this countless times. A directional coupler will only see current going in one direction. Since that directional coupler needs a short bit of transmission line to work, it will not read power at the exact feedpoint of the antenna. For all practical purposes, the length of the coupling is sufficient to prevent the meter from reading forward and reverse power simultaneously. Other variations caused from such a short piece of line are small enough to be ignored.

Power is transferred along the coax as voltage and current, and 90
degrees out of phase with each other. This means that the impedance is
constant at all points along the distributed network (sans standing
waves), regardless of instantaneous voltage or current. That's how
transmission lines work.

Agreed. The page pointed out other possibilities but those issues were
not part of the topic.

On 24 Jul 2001 06:00:07 GMT, Bill Nelson <billn@spock.peak.org> wrote:

I agree that unwanted RF currents induced on the shield will wreak havoc on a SWR meter. I also agree that there are many ways that those currents can happen. My page was only addressing two: standing waves, and improper ground. Antenna elements that induce currents directly on the shield is really an antenna design and/or mounting problem, and was not part of the topic.

Sure it's easy. If you are worried about overloading the stock
regulator, just use it to feed an external 2n3055. After all, it's
just the field current, and all you want is fifty-something amps for
the filament. Or pick a tube that uses 15 volts and avoid the issue
completely. Run a second HV alternator for the plate supply and you
are happening. If you can't find a HV alternator, use a standard 220-
or 440-VAC 3-phase job and find a small pig to step it up. You can
usually find those in the scrap yards of your local power company. If
you can't find a pig, build a voltage multiplier. Hell of a lot easier
than trying to figure out how to turn 400 amps into a few kilowatts of
RF....

Source record: 89656

Now that I think about it....

Find yourself a small deisel to drive the alternators directly. All you need is 40 to 50 hp (1 hp = 746 watts, so 50 hp will provide almost 40kw, more than enough). You can mount that puppy in the back of the truck or van, or put it on a small trailer. You can use the engine coolant and fan for the tube(s).

And going back to voltage multipliers, I remember a ham in NC that used motor starter caps to get his 3000V. His caps were too big and he blew a few fuses until he figured out how to bring it up slow. Using 440VAC, it should only take about 6 or 7 stages to get that 3000VDC, and it's already filtered. It's lighter and cheaper than a pig, too.

Speaking of which, a better place to find a small pig (less than 200 lbs.) would be a construction site that's cleaning up. Last year I found one at an old concrete pit for free (just dumb luck).

And another solution to the filament problem is to run push-pull and put the filaments in series.

I am not even going to dive into the safety issues here. If y'all want brain tumors and cataracts, more power to ya (pun intended). Just don't cook anyone else but yourselves.

> Bill Nelson (billn@peak.org)

No, I meant matching the antenna at the antenna, meaning putting the SWR meter at the antenna, and not at the radio. I'll draw pictures:

CORRECT:

Radio---feedline----swr meter----antenna

INCORRECT:

Radio----swr meter----feedline----antenna

Ok, so they're simple pictures.

You can play games with coax length to get a good match at the radio all you want to, Bill. The fact of the matter is that changing the coax length doesn't make the antenna any more or less efficient. If you think the coax braid is radiating, then balun or choke it at the antenna. You still need to tune the antenna for resonance and impedance at the antenna, and not at the radio. Whatever feedline problems you are having, you need to take care of them at the feedline, not inside the radio, and not at the antenna.

Oh, and you mentioned that the output impedance of the radio is immaterial? Ok.. Then do the calculations and tell me this: What would the SWR at the radio be if the radio's output impedance is 50 ohms, the feedline impedance is 75 ohms, and the antenna's impedance is 75 ohms? Assume the antenna's length is resonant at the frequency being transmitted. (HINT: There WILL be a mismatch here, but only at the

radio.)

Can you "show" a good match at the radio by mucking with the coax length? Yep, you sure can.

Does this make the antenna radiate any more efficiently? Nope, not in the least.

Does it make more sense to tune the antenna for resonance at the antenna, then deal with whatever feedline problems/mismatches you might have once two of the three parts of your station (radio, feedline, antenna) are fixed and known? Damn Skippy.

I've heard this too, how could this be possible? I believe the ground radials in this particular kit are angled down approx. 45% to lower the angle of radiation. (...or "flatten the doughnut.) Seems to me if your signal is clean, you could point a beam at a TV antenna and not do much, if any, harm. Ed, W1RFI,...wish you'd drop in on this one. :-)

Many years ago, I used an Antron A-99 and never had any trouble with it. It's a half wave vertical omni and I received very good signal reports with it. Hope thar helps.

It looked to me that the writer wanter to run the 13.8 from the car thru a series regulator. If you wanted to dedicate an alternator, it is as you indicate a whole lot easier.

Don't forget that these tubes only have their rated dissipation if air supply requirements are met. I would suspect that one's first bit of metal bending is to cut the 4-5" hole in the roof to vent it and the square foot or so supply hole in the floor. Then mount the blower with its substantial electrical supply.

The regulation of a voltage multiplier is so crappy that any attempt at linearity is doomed. On the other hand, it is probably doomed anyway so

have at it.

Hi Bob. Just a guess, but your 1 1/2 second pop sound sounds like
an electric fencer, if you live within a mile of someone using one
I have seen it happen before. (Generally HF is affected more than
10-11 Meters.) A lot of times this happens when dew is on the grass
in the morning or after a rain if tall grass is in contact with the fence.
It also occurs sometimes even if the grass does not contact the fence.
As far as the AM pop sound at the beginning of an AM transmission
that is strong, I am going to speculate it is normal. I have repaired
a good number of these and as a general rule I have discovered
they are nothing to write home about on AM, especially on the dreaded,
forbidden 11 meter band. They work really nice on sideband though.
Mr.K

Seems odd the ground plane kit would promote TVI.
I would say go with the kit, tune for lowest possible
SWR (borrow a meter if you don't have one), use
good coaxial cable, solder the connectors properly,
and make sure the connectors are tight. Try not to run
more than 1kw into it, and everything should be ok.
Mr.K

probably ebay or all over the net. i think it is called a inverter.
sorry about that. a converter is when you convert from single phase to
three phase. misuse of terms....

5579. For Sale, Italian made Antenna, 5/8 wave, vertical, made by SIRIO Model 827

Newsgroup: rec.radio.cb
Date: 2001-07-24 14:35:46 UTC
From: kej2.ct@netzero.net
Message-ID: <29b36831.0107240635.5a363a27@posting.google.com>
Source record: 89669
Cross-posted to: rec.radio.cb,rec.radio.amateur.antenna

It is used since last summer, in PERFECT condition, 27 Mhz with a 2Mhz bandwidth [25Mhz-29Mhz]. See it on Ebay the link is as follows; http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1258149635

This is the best vertical I have ever used in my 25 years as an operator. It is a Heavy Duty, all Aluminum, quality Italian made antenna. I have used this on SSB with contacts all over the world and I do not believe in MEGA watts of power. I also talked local and people could not believe the signal that was produced with the legal power I used.

Look for yourself I have a picture on Ebay of the antenna on the mast right before I took it down and disassembled it. I will ship it in the original box with it's original instructions.

Hi De Ho Drunk, Prozac, Zac Pro, Rotek,
Rodan, Capn. Jack, Helmut, etc etc.
I don't have to prove anything, you already
have, I thank you. You keep trying, keep
searching, scanning, reading, you have proved
I didn't make those post, so keep searching.
I wasn't worried about what you have posted
because I knew I didn't make those post. I
had suspected that someone had hacked my
account, why do you think I dropped that
ISP?
Yup, give you enough time I figured you
would find who did it, again Thanks!

> my neck out).

Peter:
Everything you wrote here is correct but you have to understand it
in the correct context. Generally speaking, coax length does not
change the SWR (perceived, real, measured, or otherwise). And
whenever I say this, I am speaking of the general case. But this
statement requires that all other parameters be kept constant (e.g.
antenna match, coax losses, etc.). In real life, changing the coax
length can change these parameters.

> surely it is false. If the purpose of the meter is to measure the reflection
> from the ANTENNA, then it (and the user) has surely been "fooled".

Well, not quite. For example, the reflection from your antenna is
dependent on the common mode currents (assuming they exist [these
will be minimal in a good installation]) and common mode currents are
dependent on your coax length. Thus, your SWR can be dependent on
the coax length and your reading will show it. Nothing and no one have
been fooled.

> If you want to know the reflection from the antenna, read it at the base of
> the antenna, with a very short lead (or double PL-259) from the antenna.
> This removes the worry of cable loss, phase, common mode currents, velocity
> factor, coax length, what the *~!# are all those circles, etc.

Generally, that is not necessary and not feasible. Furthermore, placing
your meter (and probably yourself) in the near field of your antenna

will most likely alter your SWR. This is not what you want to do and probably will yield an inaccurate measurement of the SWR you will have once you and your meter are removed.

If your antenna has a good counterpoise, your common mode currents will be close to zero and your SWR reading will be relatively accurate anywhere along the line. This IS the typical case.

5586. Re: Twisted's reply to Leland's usual weekend sucker punches!

Newsgroup: rec.radio.cb
Date: 2001-07-24 17:05:34 UTC
From: twistedhed@webtv.net
Message-ID: <27412-3B5DAADE-335@storefull-128.iap.bryant.webtv.net>
Source record: 89677

"Twistedhed" <twistedhed@webtv.net> wrote in message news:26454-3B5C3F68-224@storefull-127.iap.bryant.webtv.net... "Same WHAT as before?"

It is really strange Twisted the last thing that shows up on two separate news groups, at the start of the past weekend, is a phony post where ".cotse" appears in the header path. I never mentioned anywhere exactly what would be found, but you seem to know right away because you mentioned it by name first.

"Wow."

(See quote below). Then you proceeded to do your thing, and posted a phony message

"My, Leland. You can do a slow burn all you want. Your accusations duly dispositioned."

by another person that has been on your case lately.

"Is this where you wave and say,"Come on stooges, some help please, it's Twisted and I'm drowning again?"

To further point the finger of suspicion in your direction I haven't had any problem with the person whom the message was made to appear to originate from. Given the contents of that message the only person whose agenda would be perfectly severed by the post was yours Twisted.

"Why play games, Leland? Just say what you're trying to say and quit playing beat around stuttering games."

And as of right now I count 5 different threads you have started, just today only.

"Hahaha. And this bothers you why? Hahah! Look closer. They are replies to your suckerpunches over the weekend. If I am addressed, and I feel so inclined, I shall respond, you or anyone else be damned if you can't handle it."

All concerning in one way or another means to cover up your lies, or accuse people of doing you wrong.

"I asked you once before, Leland, if they are lies, who do they bother you? Easier to toss them out the window but instead you prefer to respond and Perry-Mason yourself which has resulted in your own incrimination each and every time. Don't shoot the messenger, Leland. You are burning because I pointed out your temerity and disdain, which was aptly exposed in your temper tantrum resulting in threats to the

group, not me Leland, the group. You were backed up so bad in your knee deep doo doo that you threatened the group, not me, Leland. You have a severe personal problem with me you are evidently unable to get beyond. Your childish attacks on me do nothing and your inability to phase me has you resorting to threatening the group. Get it right."

As I had alluded to before Twisted if you chose to keep this up the news group may once again find itself awash in various posts with you being the central topic.

"Heheheheh!. You are a piece Your second threat to the group. Go ahead Leland. I mean, I saw how many conversations you had while I was gone. NONE. No one likes you Leland, and your disregard and contempt to make threats to the group that further your personal agenda (me, haha) are why. Get a cb, pick a channel and relax."

As I remember it people were just as happy to send your ISP complaints as several others to get you to shut up.

"Nah, just you stooges, Leland. Just you and your alias. You even made bets when your lies would get me tossed. What happened, Leland? You are the one I affect the most because I put your bullshit where it belongs every time you attempt to sling it. As I said before, deal with it..count to ten..blow it off..chill out, you're going to injure yourself with all that bottled up anger."

You are doing the same thing as before, accusing people of different things,

"You made a threat, then another to spam the group "if I don't obey you." Hey Leland, screw you. I answer to no one. I don't have to accuse Leland, your threat is at the bottom of the page for all to see. I still want to know what type junk you are operating since you claim to be a cber and an interest. By the way, your lack of control is first rate entertainment."

then being unable to prove anything.

"See bottom of page."

When you're called to prove your point you just wimp out, and duck the question. I asked you point blank to post your proof as outlined in my last reply to you in the "Hey Twist" tread.

"Ha! I asked you months ago why you insisted on lying in a hammie room about a forge of me and why a computer grad like yourself can't tell a webtv post from another? Talk about dodging, you ho, er, hypocrite."

Instead you took the coward's way out, and just let the thread hang there, refusing to respond.
You like to go around and point the finger Twisted, but you just can't do any better by backing up your claims. In that department you're a total loser.

"Truly pains me. Now run and tell webtv how one of their users embarrasssed your computer educated carcass again. Oh, and be sure to take parts of my posts (as you did below) and apply them in another context to where they have no application."

Twist, you have totally flipped.

"Yea, but not recently. You act like this is a revelation or that you
are the first to say or think this..hahahahahahahha! You're about 40
some odd years too late, but damn, you ARE capable of thought. Why have
you still not placed an antenna on your roof? I mean, how do you test
all those alleged radios with no antenna? Dummy loads can only tell so
much."

Seek professional help

"Dipositioned with Leland's mutter."

I am not even going to poke fun at you anymore until you show some
sanity.

"Um, should this be filed in the same drawer as when you said, "I"m
outta here and going to start my own censored cb news group?" How about
where you stated you were done trolling in here and were returning to
the bowels from which you came right after you introduced yourself as
Frank? Does this current quote from you carry anymore weight or
credibility than your other sludge?"

Twisted, rolling and playing in his own warped and damaged psyche asked
of Sparky: "But that doesn't absolve you from answering the question
about repairing radios with no antenna on your place. And it also
doesn't excuse you from responding to me when I am directing a
conversation your way (Which I have never done, but just in case). In
that case, you are required to respond."

>anywhere along the line. This IS the typical case.

For starters, how about a reference for "the reflection from your
antenna is dependent on the common mode currents"? Or are you just out
trolling again?

==========

So tell the group how you mounted Doug's jock strap above your mantle. Other people mount deer head and so on there, that I can understand, but a jock strap, now that is Twisted! You really must like it a lot after all you did say "hangs proudly above my mantle". So tell the group what "special quality" it has that won't let you take it down.

You threatening to go and operate on the Ham bands now Twisted? "I will stay within the confines of the freeband for now." You have lied about everything else so far why stop here and claim you don't operate illegally on 10m?

Twisted there are some things you should not share with the group like; "The saucer men tell me I have a good signal in the pile"; but instead with your Psychologist for the former, and your Proctologist for the later problem.

Now here is a question that will follow you around like a shadow you can't get rid of.... (sounds of another big chuckle)

==========

What you say may well be true, but never underestimate the blathering stupid idiot syndrome. A friend of mine owns a construction business and one fine bright sunny day he was up in the bucket when one of the guys yelled out "look out Dicky, you're gonna get hit!". A car ran right into the back of the bucket truck. Fortunately, the bucket truck weighed several tons. The woman got out of her car and started screaming "what are you doing parked in the middle of the street?" Dick came down and pointed back and said "Look. You see all those red cones spread all over the street? You just ran all over them!". Moth effect may be real, but, I assure you, STUPIDITY reigns supreme!". Oh, BTW, the guys are just as stupid.

>I believe most foreign makes use amber directional signals (i.e. yellow
>hazard lights).
>Could be another reason to buy American made cars.

Actually, didn't they start putting the amber directional bars on cop cars when it was determined that red and blue flashers were much more prone to this effect?

Good drivers don't tend to do that, and will slow down to plan a safe path on approaching a hazard indication of any kind. Even the idiots *usually* catch themselves before they actually hit the object. Otherwise, you'd never see a police car without severe rear-end damage or an intact barricade with those little yellow flasher boxes.

Besides, amber turn signals are easier to differentiate from broken brake lights, and stand out more in situations where a lot of taillights are on. Front signals are required to be amber, anyway.

My '89 Dodge has amber turn signals all around, FWIW, and they're definitely easier to see than red ones.

5613. UPDATED MESSEGE ABOUT TRAMS TRAMS TRAMS.....

Newsgroup: rec.radio.cb
Date: 2001-07-24 21:22:49 UTC
From: jj475171@aol.com
Message-ID: <20010724172249.03217.00000803@ng-bk1.aol.com>
Source record: 89802

i TRIED FOR THE VERY 1ST TIME TO PASTE, I guess it didnt work!!!!! sorry. The Trams I have for sale on ebay are item #'s 1257641841, this is the D201A in like new cond, stock. If anyone wants to save a few $$$, I will sell it outright for $300.00 (+ ship) the 2nd Tram is item # 1257653393, and its a Hand wired version Tram D201, with the orange colored diamond on nameplate, it comes with a CRC100 digital freq counter for receive/transmitt, 3 level power switch, VOX built in, MINT MINT like new also, and i will let it go for $390.00 (+ ship) I also would like to sell a New cond Yaesu FT101EX FULLY OPEN FOR 11 meters, 100+++ watts, not even a peice of dust on it, very heavy duty radio, No amps needed with this baby!!!!! I will sell it for $300.00 (+ship) The Trams come with stock D104 mics, the Yaesu comes with an amplified "Bandit" desk mic. Anyone into scanners that are WIDE OPEN for covberage and freq's can also purchase the following like new cond receivers, a Regency MX-7000/20 chs/ full cell, a Realistic Pro-2004 400chs/wide open/full cell, and a Realistic pro-2042 1000ch's/wide open/capable of crystal clear images of cell.....the Mx-700 is $100.00, the pro-2004 is $210.00, and the pro-2042 is $199.00, all scanners are like new as well, im a collector of vintage radio receivers/Transmitters, and 1st I dont buy anything thats not MINT MINT, and 2nd I dont abuse my stuff, I take excellent care of ALL my radios. Im selling transmitters because of TVI within my condo complex, and my scanners because I want to buy a expensive wide band coverage receiver (probably a AOR 5000+) so I need to raise funds. FINALLY if anyone knows of someone who is in need of a 1 tube modulator, I have a custom built unit cpable of PEP of 150-200 watts from a 2-7 watt carrier!!!!! it can handle any input up to 7 watts, or as low as 1/2 a watt, and it WILL modulate that carrier all the way up to 150-200 watts.....(talk about audio)!!!!! Its less than a year old, and will sell it for $160.00 (+ship) all prices are FIRM, because I dont beleive ANYONE can get ANYTHING THIS MINT, for this kind of pricing. best regards, Frank.....73'

I know someone out there has a set of Sams on their shelf. Would you please look in CB-104 and tell me if this is the radio in the book. My Pace Sidetalk 1000M has 40 channels. They also have 23 channel radios with the same model number. Below is a picture of what my radio looks like on the inside. It uses the NDC40013 (NDI) PLL. Thanks for looking.

I being one who could not possiably be racists in anyway started reading some of this guys rants. Granted he has a right to an opinion about whatever he would like to talk about. I looked over many articles and a few blew me away. One was about the black panthers going to " war ' in Las vegas. I have known Black folks all my life and they seem just the same as white folks. I personally have never seen a difference in the two. Other than black folks are more into family than white folks guess that is why I would go to the black folks to eat more often than whites.Though I am southern and I know there are racists people here. I use to live quite close to the grand wizard of the KKK ..not the brightest bulb in the bunch I can tell you. When you say attack a website for which these type of people reside is like asking someone to beatup on a bunch of mentally handicapped individuals .

I went to a school where there were about 1800 blacks and 15 whites and I never had one black folk bust on me about being white. I have always remembered that.
Though I hate the stamps of " black" white" etc. They are just people who get sunburnt less than me. Being a redhead made it really funny as a kid. Always being called red. Nicknames one of those things that run amist the culture. If you had a nickname you were accepted. I guess I get along with black folks better. Being raised around cane fields all my life I was not taught to hate those around me. My point is that your enviroment shapes you. I personal will trust black people more than whites . I am sure that is going to raise a fuss and maybe some hate mail by some " radical " KKK person but owell. I guess it would piss them off even more for them to know I am part jew. If you are raised to hate it will take alot to change that brainwashed idea from your life. I know people focus on " this person killed/raped/ murdered/ etc . People tend to focus on the negative alot and not focus on the positive outlook of what multiple cultures have given our Society. I know there is atleast one person thinking ..Dam shawn how can you choose one culture over your own.I am not choosing anything over anything as a kid growing up the blackfolks would come directly at you if they had an issue with you. The whites tend to go behind your back. I guess it is just a southern thing. Who knows. Take care

It's important to make the distinction between "blink" and "flash". Turn signals, whether amber or red, *BLINK*. Strobes and rotating beacons as found on emergency vehicles *FLASH*. I am aware of no research indicating any kind of a "moth effect" with blinkers of any type, but I do believe I've read of this with flashing strobes.

Message-ID: <kAn77.471493$K5.50158767@news1.rdc1.nj.home.com>
Source record: 89822

Please help me out. Currently I own a Cobra 25 ST WX radio (mobile). My issue is that I want to increase it's power. I know a linear is the way to do it (not legally), but my issue is I know nothing about them.

My questions are simple. First, how much wattage gives how much distance (approx.) Second, if I'm looking for a linear around the 250 - 500 watt range, what should I go with? Where should I get it from? Please keep in mind this is going in a car, and needs to be mobile.

If anyone wants to give me a lesson on them or anything feel free.

TIA

viriiman

My sincere apologies, I just thought you were not looking in the right
place. I dug out a 23 channel and a 40 channel 1000M out of the scrap
heap (as well as a Regency CB-501 and an SBE Touch/Com 40 -- I forgot
just how ugly some of those radios were). The 23 channel rig (crystal,
btw) doesn't seem to have a model number on the back, and the face
plates are identical. Since I have never seen a 1000MC on a faceplate,
I would have to guess that the 40 channel is the 1000MC, regardless of
what the model number says. If I'm wrong, I'll buy the Sams you don't
need.

Bob,

Here's the "guess" you asked for. It *could* be as simple as a cracked speaker cone. As the hash and background noise rises and falls, naturally the
speaker reacts to all sounds. The POP at the beginning of strong AM signals might be the same thing. I had an HF rig that did this and the cure was a replacement speaker. The old one had a small tear in it.

I've used an Antron 99 for several years as have lots of my friends.It is a
>half wave omnidirectional with an adjustment for swr.It recently got struck
>by lightening so I'm putting up an Imax 2000 which is a 5/8 wave.Both are
>good

An I MAX will work MUCH better. Be sure to get it at least 36 feet off of the ground, or 12 feet above the roof (if you have a two-story house.) 36 feet to the BOTTOM of the antenna. That will put you to maximum LEGAL height (60 feet). I have the bottom of mine at 42 feet, with 75 feet of RG213 coax, and I've never had a problem talking to my locals, which are between 10-35 miles away... BUY THE I MAX... it doesn't have any ground radials, and has way more surface area, and length, than the Antron 99. It is a 5/8 wave, and will easily handle 2000watts deadkey.
Enjoy...
Maniac.

Yes, first understand that there is a misconception that power equals distance. You need to double the output power of a transmitter to roughly improve an S unit. In theory, if the transmitter goes from 12 to 24 watts, you have added an S unit at the receiving end. Now double that to 48 watts for 2 S units and about 100 watts for 3 S units. The intent of CB is to be generally line of sight communication. Few modifications to putput are truly helpful if you can find a quiet channel. You could (illegally) work from coast to coast with 12 watts given the right conditions, but given the wrong conditions couldn't do the same with 10,000 watts. Your best bet is to buy a good radio capable of both AM and SSB, connect it to a good antenna using proven wiring techniques, and forget the amp. And yes, that amp you are considering is illegal to manufacture, sell, buy, or use.

Gary I have to agree with you, the guys question is where can I get a linear (very few CB amps are anywhere close to linear). But he never did mention what type of antenna he was using, to me this is the heart of the system.

It is not hard to build a circuit similar to a crowbar, you use a voltage sense circuit that either controls a relay or a transistor to kill the filament voltage, a lot of power supplies utilize a circuit that will shut down if voltage exceeds a certain point.

4-10 Peek, resistors just seem to be what everyone is using around So. Ca. I guess because all you need is a simple stock alt and 12 V. battery set up and little ohms law to calculate what value resistors are needed. If I remember my box has 3 half ohm resistors going from one leg of the filiament post to ground. I was entertaining the thought of a inverter strickly for regulation, for as one gentalman mentioned, correct filiment voltage is critical for the life of the tube. A couple of % difference in voltage can take hundreds of hours off the tube.

I have built a dozen Leece and Fords from there stators and rotors. Last time I checked they had up to 270 amp stators.
To do business with them one must have a credit account established and have some knowledge of what in the hell your ordering. They only carry stators and rotors, the cases, brushes, and other components must be ordered from another source. So some cross referencing alt manuals are necessary. These are not cheap by the way. The good part is they have them all on CD rom now a days. If your in need of only one or two alts then I would not recommend going through all this, but if your going to throw a rack of alts under the hood and compete then people may consider building them themselves because in the long run you'll save yourself mucho denero there 4-10.

Correct, if you go with a pair 3cx3000's you avoid the filament issue all
together because two in series would split a stock 15v battery setup in
half. The old Christmas tree light bulb in series effect.

On the subject of blowers, Grainger part supplier carries a 12v Dayton
blowers that will work great under most decks. One blower will do but I
used two just to be sure the tube is getting cooled properly. Remember the
tube is easily capable of power outputs way above specifications so extra
cooling is a must if your going push the tube in times of need..

Also Richard B+ only appears at the anode when the mike is keyed. 12v is sent to the
field of the alternator via a set of relay contacts from a 12 v source. This is the only time
that HV appears at the top of the tube when the field is excited. Safer then allot of commercially
built boxes out there I think.

5665. Re: SWR Tuning Issues, Please Help

Newsgroup: rec.radio.cb
Date: 2001-07-25 06:17:14 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9jlo9atpt6@sevenofnine.peak.org>
Source record: 89705

Sideband <sideband@spam.me.not> wrote:

: You can play games with coax length to get a good match at the radio all
: you want to, Bill. The fact of the matter is that changing the coax
: length doesn't make the antenna any more or less efficient. If you think
: the coax braid is radiating, then balun or choke it at the antenna. You
: still need to tune the antenna for resonance and impedance at the
: antenna, and not at the radio. Whatever feedline problems you are
: having, you need to take care of them at the feedline, not inside the
: radio, and not at the antenna.

Where did I state otherwise in anything I wrote?

Personally, I don't bother with an SWR meter, except to verify that I
don't have an unexpected short or open in my feedline.

I tune my antennas using a field strength meter.

: Oh, and you mentioned that the output impedance of the radio is
: immaterial? Ok.. Then do the calculations and tell me this: What would
: the SWR at the radio be if the radio's output impedance is 50 ohms, the
: feedline impedance is 75 ohms, and the antenna's impedance is 75 ohms?
: Assume the antenna's length is resonant at the frequency being
: transmitted. (HINT: There WILL be a mismatch here, but only at the
: radio.)

The SWR will be 1:1. So what? Put an SWR meter in line at the transmitter,
and you will still see a 1:1 match. Why? Because the mismatch is between
the transmitter and the SWR meter - not between the SWR meter and the coax.

: Can you "show" a good match at the radio by mucking with the coax
: length? Yep, you sure can.

: Does this make the antenna radiate any more efficiently? Nope, not in
: the least.

If you don't have currents on the outside of the coax, then I agree.
But that is all I have been saying all along.

: Does it make more sense to tune the antenna for resonance at the
: antenna, then deal with whatever feedline problems/mismatches you might
: have once two of the three parts of your station (radio, feedline,
: antenna) are fixed and known? Damn Skippy.

Tuning the antenna for minimum SWR does not guarantee resonance. Most
antennas do not have the design impedance - for various reasons. It may
be close enough that tuning for minimum SWR will get the antenna close
to resonance, but it will not guarantee it.

In actuality, I don't care if the antenna is resonant, or not. All I
care about is that the maximum power is radiated.

What a steaming crock of shit. You clowns know that a "3cx3000a7 for the mobile" is illegal. Your posting that "experienced" people only should attempt to duplicate your thoughtless RF pollution is more an attention-seeking behavior than a legitimate warning.

Pain.

Your idea of "play" pollutes the RF spectrum. Its like dumping garbage
in a river. As long as it flows downstream you don't have to
experience the effects of it.

: I am ignoring it because it is not a variable. Since there is no
: antenna on an open coax, the antenna efficiency is moot as well. Let's
: not try to compound this issue.

Sorry, I was talking about a system with an antenna - not an unterminated
piece of coax - although that would also radiate.

:>I don't think we really disagree in principle, only in how to interpret
:>the details of the various claims.

: I think we do disagree on one basic principle -- the fate of reflected
: power.

: Here's my illustration:

: Given: a tube final, and an output tank converting, say, a 3000 ohm
: plate impedance to 50 ohms at the coax. Create a mismatch at the
: antenna. The reflected power will change the input impedance of the
: coax (unless it happens to fall directly at the 50 ohm point, which
: doesn't happen too often, hence it will be disregarded here). This
: change of impedance is going to be proportional to the reflected
: power, and it will be either directly or inversely proportional
: depending on the phase interaction of the forward and reflected power
: at the coax feedpoint.

No argument here.

: Now since the tank is a frequency-dependent impedance matching device,
: when you change it's load you detune the tank. What happens to plate
: current when you detune your tank? It goes up, right? What happens to
: plate dissipation when you increase the plate current? It goes up,
: right? How much you wanna bet that the additional plate dissipation is
: a number that is close to the reflected power?

The only way that what you say could be true would be if the power entered the tube and traveled the wrong way through it. How is that going to be accomplished?

In any event, why leave the tank in a detuned condition? Retune it, and the plate dissipation would return to the normal value.

: That's just one way reflected power is dissipated in the transmitter.

Well, more power is dissipated in the transmitter. Our disagreement is just the source of the power that has to be dissipated. I claim that it is due to the final not operating at the designed efficiency - you claim the reflected power enters the tube and is the cause.

I doubt if we will ever agree.

: On 24 Jul 2001 05:48:20 GMT, Bill Nelson <billn@spock.peak.org> wrote:

:>: You just described how the reflected power is dissipated in the

I must disagree with this. If you part with your hard earned cash for anything, you expect it to do the job it was purchased for. I don't know about the USA, but in the UK, we have laws that recognise this issue. If you buy an antenna for a 50 Ohm 27MHz radio, you expect it to be 50 Ohms, and be tuneable at 27 MHz to within negligible or stated tolerances.

As for the user, I have full confidence that this "Chad" guy is able to tune an antenna.

As a reminder .....

I must disagree with this point. The method is feasible, and has been used by many people - including myself.
I agree that it is not always necessary to use this method, and on a mobile installation it can be impractical. But I have seen cases where a mismatched antenna (>3:1) has shown as a 1.1:1 SWR reading at the radio end, and where the customer has noticed a big problem with their distance range - and this method has cured the problem.

> Furthermore, placing your meter (and probably yourself) in the near field

The meter will be directly below the antenna, and the person will also be below the antenna height I have tuned antennas this way, and a check at the radio end has always agreed with the reading at the antenna.

http://www.exportradios.com/
I think he took over coax-kid, et al.

For 250 to 500 watts, you'll be looking for a four transistor linear (four pill, the rf power transistors look like horse pills -- white, about 3/8 to 1/2" in diameter). This will run you between $250 and $350.
Another consideration is the type of car you have. What is the capacity of your alternator?
For discussion, let's say you have a 500 watt amp. This is a class AB-1 amp and it will be 50% (I think it's really 60%, but let's make the math easy) power efficent. This means that it will require 1000 watts power to operate it. Watts law says P=IxE, so I (amperage)=P(power, watts) divided by E (EMF or voltage). 1000/13.8= 72.46 amps. For a 200 watt amp that would translate into about 29 amps.
If you drive a Suburban or a full size truck, this shouldn't be an issue. But I wouldn't recommend a 500 watt amp for your Hyundai or Dodge Neon. Some vehicles computers are prone to strong rf signals. Wouldn't it be a bummer to key up and have your car die?

Please read the other posts. Many of the guys on this group are dead set against linears, but they do offer very good suggestions.
Side band operation is more efficient. If you're into side band, make sure the amp has a delay switch for SSB use.
Antenna considerations are also important. I would recommend the Wilson 1000 or a 102" stainless whip. Try to avoid the "off brand" cb antennas. A good rule of thumb is to avoid loading coils (the Wilson 1000 is base loaded, but it's still a good antenna and it will handle power) and longer is better.

Like a lot of guys in this group, I've talked a lot of skip on a barefoot sideband radio.
Work on the major points of your system (good sideband radio, good antenna and installation location)
then decide if you want to crank out $350+ dollars on a 400-500 watt linear (did I mention that if you run your amp from the driveway during the 5:00 news it will make your phone ring?).

But not as a transmission line. You are effectively removing the
transmission line and using the coax as an intentional radiator.

<snip>

>accomplished?

Transmission lines are usually analyzed as a distributed network of
inductance and capacitance, or little "tanks" for lack of a better
term. In effect, the transmitter's tank is just an extention of the
transmission line. Since power is carried in the form of voltage and
current, it's easy to see how if power can go one way it can also go
the other way at the same time, and how reflected power -- in the form
of voltage and current travelling along a distributed network -- can
end up on the plate or collector of the final. They are just waves.

Analogy, and don't be offended if this sounds to boneheaded: A person
stands at one ends of a pool. He splashes the water to create a wave.
The wave will continue until it reachs the opposite end of the pool.
Since the pool wall cannot absorb it, the wave is reflected back.
Also, when the wave reaches the far end of the pool, the person
splashes the water again, creating a second wave. Now you have two
waves racing toward each other. They will not crash and burn in the
middle of the pool, but rather they will pass right through each
other. The first wave, the one that was reflected, will end up right
back at the person that created it, and the second wave will end up at

the far end and get reflected just like the first. I really can't put
it any simpler than that.

>In any event, why leave the tank in a detuned condition? Retune it, and
>the plate dissipation would return to the normal value.

Then you are detuning the tank away from the characteristic impedance
of the coax, and you will end up with a conjugate match.

>: That's just one way reflected power is dissipated in the transmitter.

>Well, more power is dissipated in the transmitter. Our disagreement is
>just the source of the power that has to be dissipated. I claim that it
>is due to the final not operating at the designed efficiency - you claim
>the reflected power enters the tube and is the cause.

It's both. The reflected power causes the inefficiency. If there was
no reflected power, there would be no need to retune.

>I doubt if we will ever agree.

Maybe, maybe not, but at least it's a civil discussion.

The commonly used measure for "S" units is 6db, where 3db is a doubling in
power. For a full "S" unit increase in signal strength you need to increase
power by a factor of 4, not 2.

Hope you did'nt mind the posting of your page to the other NG, but I felt it was/is a better avenue for some civil discussion with a group of people who can better discuss/understand what you are saying this way we can have a good technical thread and hopefully learn something because thats why you wrote it for people to learn. Personaly, I would prefer to see you use your time in this manner than waste it on Twistie. Then at least we can learn something, it instead of laughing at him all the time.

Just curious. How can an antenna be a "splatter stick," i.e. cause splatter? I always thought the antenna's sole purpose was to radiate and receive rf energy. If you feed it a dirty signal, the IMAX 2000 should also radiate a dirty signal. Fed a clean signal, both antennas should radiate same. I was just curious as I've heard this reputation of the A99 from others as well. I owned an A99, and I experienced no such problems. I've heard the IMAX 2000 is a very good product that performs well. I have one in the basement waiting to go up due to a very high recommendation from a very antenna savvy chap. Thanks.

Tell me about it...and nine times out of ten, it's some congressman (er...congress-person) who couldn't tell rf from a hole in the wall and seldom seeks outside advise re. the same. The fact that you even received a letter re. the possibility of "phone"s-dropping (my sad attempt to alter the word eavesdropping - what a butcher job, eh?) shows he jumped the gun. Any (Well, most anyway.) radio layman would've advised him re. the difference in frequencies and that a letter re. RFI would've been more appropriate. Yeah, a bit of a mess.

I never worry about the FCC, but I do worry sometimes about a quick triggered neighbor who has nothing better to do than go on a letter writing campaign to our local representative, who doesn't know the first thing about TVI/RFI and lacks the good common sense to seek advise. Some think my TVI/RFI preventative measures are extreme overkill, but I've never gotten a call or a warning in over 24 years...even whan I was doing what I wasn't supposed to and when "Uncle Charlie's" presence was way more evident than now. Add that to the fact that my antennas are of the home-brewed wire variety hidden in the trees and you have a recipe for a great neighborly relationship. Wow, long post?...guess I babbled a bit. Take it easy.

If the antenna was designed to withstand a 70 knot wind at ten feet off the ground, it should take the same abuse at 50 feet, If it wasn't, then it won't.

5701. Road Trip - New movie based around CB Radio

Newsgroup: rec.radio.cb
Date: 2001-07-25 15:39:05 UTC
From: Power House <"Power House"@My>
Message-ID: <tltq3jee9tieee@corp.supernews.com>
Source record: 89741

Anybody seen a preview for the new movie coming out called "Joy Ride"? Looks pretty interesting. From what a I gather, a couple of younger guys (20's) are playing around on the CB with some truckers. One of the truckers happens to fall for their pranks, and ends up at a motel room where he doesn't quite find what he was expecting... The trucker ends up killing the guy he finds in the room (not either of the kids), and then goes after the kids, apparently trying to kill them or some shit...

Did a freeze frame on the preview... They are using a Cherokee Nightrider 150. Funny thing is, in the picture, they have the unit set on USB, when clearly they are communicating on what is supposed to be AM... Another interesting feature... They superimposed an LED style meter over the S-meter. It doesn't fluctuate with signal strength, but instead mimics that of the truckers voice, (IE modulation meter style,) granted, rather poorly however...

If you are interested in checking out the preview, here is the URL... First one is the small version for those of you with dial-up, otherwise, the second is the BIG one.. Broadband only, unless you want to wait a few hours for the download.. :)

Glen...I think you would be pretty happy with the IMAX-2000. I put one up at my base and i like it a lot. I also had an antron 99 and noticed a difference in receive mostly, but those i talk to also tell me my signal changed slightly. As with any antenna though if your radio is inputing a "splattered" signal into the antenna then thats what is going to come out of it. Make sure that you radio is transmitting a clean signal and you shouldn't have problems. I never really had any TVI problems with my antron 99 either. Then again i have my antenna on top of a horizontal beam antenna that is on a 60 ft. crank up tower...maybe that helps it a little bit...Either way the IMAX2000 is a great antenna...Is it a solution to your TVI problems??..probably not...hope that helps ya out a little bit...later...

Antennas get a reputation as being "Splatter Sticks" because the they do not have radials which allows for current flow on the outside of the feedline.

Current flow on the feedline causes feedline radiation. Feedline radiation causes interference because is brings the RF energy down closer to ground level, often much closer to power, phone, cable lines etc.. This causes these other "antennas" to be subject to a much higher RF field density then they would be if all the radiation were occurring up at the antenna.

Many manufactures claim that their antennas don't need radials to operate, and in a sense it is true. They don't "need" them to get a good SWR. But SWR tells you nothing about about a antennas radiation efficiency or pattern. Both of which can be improve by the addition of radials to a any end fed antenna.

Any manufacture that tells you their 5/8ths wave antenna, with no radials, has the same advantageous low angle of radiation that is attributed to one with radials, is lieing though their teeth.

Solarcon has recently released a radial kit for their I-max 2000 & I-max 99 antennas. (see they know the truth) They consist of a special metal plate that can be retrofitted to antennas that have already been installed and Four 6' fiberglass radials.

We have them in stock $37.95 plus shipping

Agreed. And we could add, "Non-distracted Drivers" would take evasive action.

> Even the idiots
>*usually* catch themselves before they actually hit the object.

Apparently, based on NC Highway Patrol statistics, there are SOME idiots who do NOT catch themselves. Even if it's one in 10,000, you don't want to be the one they hit.

>Otherwise, you'd never see a police car without severe rear-end damage

In North Carolina, Law Enforcement personnel do not drive around in patrol cars which have been hit. The cars are repaired (if possible) before going back on the road.

Ok, I'm sorry that I didn't give any more info then this. Here we go.

I own a 2001 Jeep Cherokee Sport. Whether or not the alternator can handle a linear, I don't know. Talking about getting a new radio with AM and SSB is out of the question. I have one already I paid $80 for, and I really don't feel like investing into another one when there's nothing wrong with this one.

The antenna I plan on using is a 4 ft. firestick II (www.firestick.com) antenna. It's rated to handle 900 watts. I think this would be able to handle a linear. Why firestick? Because I need a good antenna that will also be durable for when I go off-roading.

I need the linear because I feel as though when I use my CB, I'm transmitting (at best) 2 miles ahead and behind me. I've upgraded all my cables. I also moved from the magnetic mount antenna to a perm. install (hole in the roof of my car)

I guess my real question would be, since I have all this done (wiring in the car, antenna, etc.) What can I do to improve transmitting distance? Just so that there's no confusion, I have the Firestick II 4ft antenna, SS-3H spring, K-4ADD roof mount, and K-8R18 antenna wire. These all firestick (www.firestick.com) products, so check their website to see what I'm talking about.

Thanks again to everyone

Viriiman

If there is nothing wrong with it, then sell it, and get an AM/SSB radio. if you can afford a 2001 Jeep Cherokee Sport then $150 to $200 is not going to break the bank. It's just like asking for the time on the CB, if you can afford the radio you can afford to buy a watch. The point others have missed on IF you can have a top notch radio and an antenna, which will do others no good to hear you, if they use crummy radios and antennas. Your second best bet is to get the others in your group to check their installations, and improve them too. You would be very surprised how a radio with a better receiver section can make a difference, same goes for the antenna. Remember, for $80 you only get what you paid for, a cheap CB. As the saying goes - If you can't hear'em, you can't communicate with them.

Source record: 89905

This is not the first time the Antron has been accused of being unneighborly. Recently someone announced that radials made his problem worse. Now I wouldn't know an Antron if it drove over my toes on its tricycle and even less about IMAX so what I would like to do is toss out a few questions and my answers and let the group tear me to shreds.

The problem is fairly obvious that direct radiation is hitting the neighbor and coupling either directly or via unshielded cables including the power lines. Other than the Astroplane, a modified discone, most antennas are good at even-harmonic rejection and equally poor at cleaning up a dirty signal.

1. Any vertical antenna lacking radials will have a primary lobe both above and below the horizon. So if the Antron is a vertical center-fed dipole you better believe that the neighbor's house is in the pattern big time unless the antenna is very high off the ground. An end-fed halfwave ala Ringo is not a lot different. But how in hell do you put radials, driven or parasitic, in the pattern without a lot of detuning?

2. Radials can be used and are as resonating elements, current sinks, and pattern directors. The ability to deflect the pattern is the basic reason for the 120 .4 wavelength radials buried in a swamp, the traditional AM broadcast verticals. So it would seem reasonable not to point the radial at your neighbor's living room. Anyone had any experience?

3. Loaded antennas in general are tough to decouple from their feedlines and 5/8 are impossible even in theory. In a previous missive I have noted how in a mobile installation -- using non-resonant or loaded antennas in the ham bands -- grounding the shield to the car body on the order of 6 feet from the antenna did the decoupling and resulted in much superior performance. I would imagine that ferrite chokes, running the coax in a ten-foot piece of pipe, or winding a choke in the coax would accomplish a similar purpose. While I do not think feedline radiation is the culprit here just how does one prevent it?

BTW, Tim at Antenna Warehouse, even though you were pimping a bit, nice post.

Dick N BK -- that's Beer Keg to you, son.

Hi Dick, You answered your own question right before you asked it.
Beads, quarter wave sleeves, and wound coaxial chokes are all effective
means of attenuating common mode currents on a antennas feedline. But
they do not address the pattern shaping / efficiency aspect of antenna
performance.

Common mode currents on a antennas feedline most certainly can cause
EMI as well as have destructive effects on the antennas radiated
energy. This has all been well documented over the years.

I'd love to get into a long discussion with you on this, but I am
sorry I just do not have the time. I was just passing through and made
the mistake of posting some facts along with a mention of a new
product. I really should know better.

Tim

I have a Palomar 225W - also a Palomar 40W.
My question: Can I use the 40W to drive the 225W.
I'm sure you're laughing at me, but I've just entered this awesome hobby.
For the record, I'm using a Uniden Washington (it's been peeked out, that does 30 Watts). I only get 150 out of the 225. So... I thought maybe I could use the 40watt to drive the 225watt - so I can get more wattage... can I do this ??
Thank you.
-Steve

From: sales@antennawarehouse.com (AntennaWareHouse)
  Hi Dick, You answered your own question right before you asked it. Beads, quarter wave sleeves, and wound coaxial chokes are all effective means of attenuating common mode currents on a antennas feedline. But they do not address the pattern shaping / efficiency aspect of antenna performance.
    Common mode currents on a antennas feedline most certainly can cause EMI as well as have destructive effects on the antennas radiated energy. This has all been well documented over the years.
    I'd love to get into a long discussion with you on this, but I am sorry I just do not have the time. I was just passing through and made the mistake of posting some facts along with a mention of a new product. I really should know better.

Tim

"By all means, post away. Not everyone considers mention of a new product "spam" and I thought your post was very informative, although I do wonder about the radial kits on the Antron. My brother had a few Antrons with and without the radials. Not saying whether it made a difference one way or another 'cause I really don't know and it didn't show any difference on my end, but claimed he saw no changes in report, receive, swr, etc. In all fairness, I have witnessed bleedover from a fiberglass antenna that was quieted after replacing with a metal antenna."

If you have to talk on a well used frequency then you've done about all you can do. If you are chatting with friends in other vehicles, search up the band for a quieter frequency and you should be able to get greater distance. Turn down the squelch some and tolerate a little background noise.

Source record: 89916

Not a good idea.
No sense in laughing at you because if you don't know, you should be told.
I will assume you have a wattmeter to check the output of your amp.
Turn your Washington back down (I hope you can do this) to like two watts on an AM deadkey. Increase the output of the Washington on a dead key and watch your meter. You should see the power increase and then start to drop when you get to the 5-10 watt range. Try this on all 3 power setting (hi, med, lo). And, oh yeah, use a dummy load (27.165 MHz will work nicely - just kidding).
The Palomar 225 is made to be driven by the four watts of an average CB radio. Even the "high drive" models they offer only take around 10 watts.
My HD 450 (I only use it on 10 meters) will drop from 300 watts (on hi) to 200 watts when you increase the input from 4 to 8 watts (now maybe someone's laughing at me). Running too much drive into a transistor (or tube) amp makes it sound like s**t. Also, it's hard on very expensive components.
Now, most of your amateur linears are designed to operate with 100 watts input. I've seen some of the older ones designed to run with 40 to 80 watts input. With those you will realize 500 to 1500 watts out.
Have a look at the Texas Star "Sweet 16" (1600EX). This amp requires 100 watts input.
http://www.texasstar.com/export/1600EX.gif
There used to be a guy around here that had one (it was funny. He drove a Pinto hatchback with a huge homebrew copper alloy whip with an oversized military surplus spring mounted on the roof). He sounded all muffled because he drove his amp with about 150 watts.

If you replace that 4' firestick with a 102" whip and a 6" spring you would probably double your range. You can tie it down while you're 4x'ing.
You shouldn't have a problem running an amp in a Jeep. But, keep in mind what Leland said: "If you can't hear them, you can't talk to them".
They'll be out of your receive long before you're out of theirs.
And, you're going to pay 3 times (or more) the cost of that radio for a 250 to 500 watt linear.

Where is this data on the vertical without radials having two major
lobes, above and below the horizon. I have always figured this, but had
no reference information or data to back it up. The A99 is half
wavelength end feed antenna with a impedance matching circuit, at its
base or feed point.

I am sure the radials will change the antennas impedance, but maybe well
with in the range of the impedance matching circuits adjustment range.
Or the two tuning rings that change the primary to secondary turns
Mutual coupling / inductance.

Again I wish I had a dime for everyone I have heard that went from a
fiberglass stick to a 5/8 wavelength ground plane antenna to eliminate
or significantly reduce the interference to his neighbours.

> your neighbor's living room. Anyone had any experience?

Great question. Wish I had a answer.

I have a 60 foot tower that I will have different antennas put on and will rotate them to see just what does the ground plane radials do to the azimuth energy pattern. Also will be able to rotate the antennas in elevation to see what the real measured elevation angle is, as compared to a analytical elevation pattern. These measurements will be tricky, because I don't think anyone really knows all the Hoo Raw involved! And a close eye must be kept on the data to verify the measured data isn't trash.

> 3. Loaded antennas in general are tough to decouple from their feedlines and
> 5/8 are impossible even in theory.

I have read this, but don't know if I understand all I know about it.

I had a customer who needed a special antenna in for a very ruff service, in the VHF Low Band, somewhere near 31 or 32 MHz, I think?!?!?! The antenna had to be installed in a Jungle type environment, and ground radials where out. After repeated attempts and several months, in a coil / capacitor impedance matching device, the antenna could only be tuned with a known length of mast, that was obviously acting like a counter poise.

The fix was to include the ground plane radials, that where able to pivot up for the antenna installation, and then put in the down and stowed position for the antenna use. This was quit a design undertaking. I am sure I hurt myself doing all this.

But this highly modified 5/8 wavelength antenna, stayed the same SWR at 10 feet, as it did at 100 feet high in the tree's.

The 81 amp in a Wrangler has trouble with a 4 pill. A 2 pill works fine
and is all you need.

> The antenna I plan on using is a 4 ft. firestick II (www.firestick.com)
> antenna. It's rated to handle 900 watts. I think this would be able to

> be durable for when I go off-roading.

Some clubs have banned long antennas from trail runs due to the fact
they whip around. A longer Firestik works a _LOT_ better then a
short Firestik. A 4' is fine for trail runs because everyone is close.

> I need the linear because I feel as though when I use my CB, I'm
> transmitting (at best) 2 miles ahead and behind me. I've upgraded all my
> cables. I also moved from the magnetic mount antenna to a perm. install
> (hole in the roof of my car)

A Jeep is not a car. I have been taken to task for calling my TJ a "car".

It may not hurt to run a ground braid from the base of the antenna to a
seat bolt or other secure ground. Use star washers.

> I guess my real question would be, since I have all this done (wiring in the
> car, antenna, etc.) What can I do to improve transmitting distance? Just so
> that there's no confusion, I have the Firestick II 4ft antenna, SS-3H
> spring, K-4ADD roof mount, and K-8R18 antenna wire. These all firestick
> (www.firestick.com) products, so check their website to see what I'm talking
> about.

Remember that 1:1 SWR is not always resonance. Some antennas are resonant at
a 1.5:1 SWR. If your antenna is tuned to around 1.5, it is useless to attempt
1:1. No one will notice.

Happy trails. You will get mud on your Jeep. And whatever you do, don't lower it. <:

I cannot possibly see how this antenna would put anybody with half a brain through hell. Either you received a defect, which I have not heard of one yet on the 827 model, or you just don't know what the hell your doing. SORRY if I hurt your feelings but, that's the facts.

I have had the 827 SIRIO and my (4) element beam to compare it to, and of course the beam was better but, that SIRIO was performing pretty damn good. Better than every other vertical antenna I have had over the years and I have been fortunate enough to buy and try them all.

What do you BIG radio operators use, a fiberglass piece of shit like the Antron or Shakespear.

ENOUGH SAID, have a good day!!!

Those of us describing the science, not the dweeb at your insurance company.

The problem isn't with all "flashing" lights, the problem is with Xenon strobes (the kind that work with an electric discharge, like a camera flash.) These units' instantaneous rise time (time from "full off" to "full on") can create in other road users all kinds of perceptual issues detrimental to safety. It is not, as some uninformed individuals have posted, simply a "Just look away from the lights" issue. I could go into paragraphs and pages of perceptual science, but I'd rather eat dinner at the moment, so the bottom line is: Use beacons that use halogen bulbs with rotating reflectors in order to create your flashing warning lamps if your insurance allows it. You get a better safety-warning effect, and the slower rise time of these units (as an observer stands in any fixed location) avoids the vast bulk of the safety-negative aspects of Xenon strobes.

Twistie that saying has been around long

"Yep. Sure has, but I planted the seed in your little mind. Glad to see
your band of anti twisti cb wannabes paying attention and showing some
retention."

Jit Lips, don't flatter yourself I don't read your posts that closely. Ill
say it again real slow for you. I have never seen the post where you claim
to have said that.
.....

before your sorry ass but now you want to take credit for what I have
said.

>"Not at all, just for what I said."

You sure do you want credit for me saying something that wasnt even close to
what you said. Remember Bada Bing, you acted like your the only guy in the
Country to watch the Sopranos Get lost you blow hard

which isnt even close to what you said.

"You're right. You butchered what I said.

Haha Yeah Ok Just because you say it doesnt make it so.

5766. Re: For Sale, Italian made Antenna, 5/8 wave, vertical, made by SIRIO Model 827

Newsgroup: rec.radio.cb
Date: 2001-07-25 23:24:55 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B5F5547.9376C97C@qnet.com>
Source record: 89779

Hello Train:

I bought one of these antennas from a outfit back east for around $80 dollars, plus shipping. What caught my eye was, the antenna was advertised as a new replacement or look a like to the old out of production Hy-Gain Penetrator 500, 5/8 wavelength ground plane antenna.

I was sadly disappointed in its design and quality. I informed the company that sold the antenna to me of my disappointment, and they offered to return my money to keep me happy. Great Outfit!

But I am sure if you assembled it, and put it up, it would work.

While testing mobile antennas a few weeks ago, I had a step Attenuator installed between the my base antenna and the radio. I had left the Attenuator on the 10 dB position, resulting in all incoming or received signals being attenuated down by 10 dB. I didn't notice the 10 dB loss to all the received signals. Meaning that if a antenna isn't working at full strength, its hard to notice. All the more reason to have a reference signal or local station who isn't always changing his power level, so that a constant or reference signal can be seen verifying the antenna, coax, and receiver sensitivity is the same all the time. The S-meter was about 2 S-units down, and I didn't even notice!

But I am not going to install or recommend this antenna to anyone. The material the aluminum tubing is made from, is pretty bad. Not worthy of a broom handle. (My X wife, or her Attorney won't ride on a broom made with cheap shit aluminum tubing) So why should a Super CB'er or Ham install this type of antenna, only to have it blow down, and me catch heck over it. The Italian made Spectrum 1600, 5/8 wavelength antennas where tried out here in the Mojave Desert, by a few locals. All these foreign made antennas bent, or broke, at the bottom vertical element where the majority of all the mechanically stress is. They all have different antennas now.

If your not in a constant wind and sand storm, this antenna maybe all right for you.

All my advice and suggestions are only there to help the radio enthusiast, buy saving him, time, money, wearing out the ladder, roofing, and driving over the antenna assembly. If you analyze the cost and time involved, its much cheaper to install a good antenna the first time, and last many years, as compared to having to mess around, hassle the neighbours, half to put a new roof on, because you spent all summer on the roof, messing around ect.

If you want, slide on by, this antenna is complete and is free. Its in the scrap pile, with a few other foreign look a like Sigma 4's, Stardusters, and something else, foreign goof ball looking thing?!?!?!??

This is not a "right or wrong" topic. The original message was to alert REACT personnel to the danger of being parked on a roadside with a flashing stobe light.

If snow plow rules require the lights, use them. If you are a rural mail carrier in some states, or a school bus, you must have the lights.

As for the CHP with bright lights and parked at an angle, you are seeing their way of defending against the "moth effect". Many law enforcement teams nationwide are adopting the "angled parking" technique.

The bottom line is: If you find yourself stopped alongside a busy highway, keep yourself out of danger whenever possible. The "moth effect" is something the average person would not realize unless it were pointed out.

Of, if you're the driver on that highway, now that you know about the moth effect, use mental discipline and don't stare at the light. DUH.

Seems like you know all about COTSE don't you Twisted. To continue the person whom this appears to origante from I had never had a problem with BEFORE OR SINCE the post. Now mail2news@dizum.com is one of those nice E-mail to news group posting services. Works real good to hide where the message came from, particularly when it comes from some free mail account like http://freemail.cotse.com which can be used to hide one's identity. Look at the log-in page for this free mail service you will see down the page a section with.....

Members help us support the costs of the free services and keep everything ad free. In return, members get:

SSL 128 Bit encrypted connection to the webmail server.
Multiple Identities Maintain multiple identities usable in both e-mail and usenet.
Virtual Domain Unlimited email aliases.
POP POP3 access to your mail
SSL Wrapped POP Encrypted POP3 access to your mail
Mail Filters Anti-spam and general message filters
Mail Forwarding Forward mail to another account
Mail Fetch Fetch mail from another account

Notice the

"Multiple Identities Maintain multiple identities usable in both e-mail and usenet."

This made to order for you Twisted. Lets you post your rubbish where you want while hiding the trail back to your door step.

So to sum things up Twisted. You screwed up by using that service again, mentioning the domain name which you would know, posting a forged message by somebody who would have no logical reason to say what they did (N7CVF), posting it in a Ham news group (rec.radio.amateur.policy) where you have posted before as Twistedhed, the writing and quoting style matches yours, and the post was right after your posts before you disappeared for the weekend.

It seems like you figured you would fight dirty by forging a post by a Ham on a Ham news group to stir things up a bit because you're getting kicked around on this one, and nobody is rushing to help you either.

Very Green question here. What sort of handheld are you talking about
here? And where can I read up on them?

Thanks,

Curtis

<SNIP>

What do I care about good practice?
But thanks for the Advice. I was going to post the link But my point was for them to comment on the different points of Franks info, by them going to a web page they would have looked at the page and possibly make a comment. or never said a word about it instead they had the full text in front of them to add there comments where they felt appropriate. As you see it was somewhat of a big hit and brought out some good points and posters.

For you and others looking for a reason to flame -- he posted it, it's done, no harm, no foul. He didn't follow it up, so he didn't take credit for it. He also posted here that he had done so, and it doesn't take a ham license to read a newsgroup.

So he forgot to post the link, so what? Memory problems run rampant in this newsgroup. Move on already.

What was said was to do like Twisty does and read each header when you read a post. How hard was that to figure out. No one said anything about you being obsessed with twisty.

Not really in my opinion, running over the plate voltage is allot more forgiving then running a higher filament voltage. There is a book out called "Care and Feeding of Power Grid Tubes" among several others that are very explicit about running filament too high and reducing life emissions..

You'll understand I'm sure that my reference was to Jay Aquino, who said
something to the effect of "Duh! Just don't look at the lights!".

> so the bottom line is: Use beacons that use halogen bulbs

> > if your insurance allows it.
> >
> Amber warning lights,is what they advise.

Beacons as described are WIDELY available in amber. The point, sir, is
that if your insurance policy does not explicitly require Xenon flash
modules, you are better off with rotating-reflector halogen-based amber
warning lights.

Think about it, Jay. A vertical half wave, whether center-fed by running the coax up one element like a VHF antenna on a fiberglass firetruck or end-fed in true Zepp (short for Zeppelin, the wire trailing behind your hydrogen conflagration machine collecting static) fashion it is a friggin dipole. Dipoles are symmetric about the center.

So if I hang a 67 footer between two tethered blimps north and south and fire up at 7020 is there any good reason to believe I will be any better NW than SW? The patterns are symmetric about a perpendicular to the center point in a cardoid pattern. Turn the whole verstunken mess vertical and is there any good reason to believe that if I have a pattern 14 degrees above the horizon I won't also have one 14 degrees below the horizon??? I could throw away the balun with only a slight imbalance; see the Handbook.

Burying a reflector wire under a horizontal dipole is an old stunt: if you are going to radiate into the ground you may as well re-radiate it on the theory that things that can't dance should at least keep time. This is why the AM broadcast radials are .4 long not .25 -- to re-radiate ground reflections. Probably more trouble than it is worth at 27 MHz.

But it does raise an issue, is the radial a shield or a radiator? in one case you would want to point it at your neighbor, in the other you most certainly would not.

Yeah, I wish I understood all I knew about decoupling as well.

Don't fall over the cork.

Beer Keg

When you are using a directly heated cathode, when they say 7.5 they damn
well mean 7.5 with no cheesy connections allowed. Fiddling with plate
voltages is risky; fiddling with the filament is fatal.

I do not have a VR107 (AM Power) pot on the board. The circuit board is silkscreened for one, but I can't tell if there was one there and someone removed it or what. All I have is the HR 2510 service manual and it seems to be the same as the Lincoln. Is this the way it's supposed to be???

I bought the radio second hand and it has been modified for the clarifer, but I can't see any other obvious mods done to it. The radio works good and has not been butchered up. It just seems odd that there is an adjustment missing.

Well its another sweep tube amp.
The tubes are about $20 each at RFP. So around $100 to replace them.

If you really want tubes I would look into an amp that has a tube designed for RF. 811A, 572, 3-500z, 4-1000, 4cx1500A/B etc...

A pair of 572's will give you around 400 watts and cost $100 to replace. But you won't be replacing them as much as those sweep tubes. Also you will more than likely have a lot cleaner signal since you would be using a tube designed for RF TX and not RX.

The Ameritron AL-811 is a 3 tube 572B amp and runs about $650. They rate it at 600 watts. If you are looking for bang for buck than sweep tube would be the short term answer. Otherwise go for an amp with real transmitting tubes.

Of course I will have to say this is my opinion as well as most of the techs in my area.

Packrat

Greetings!

*** The following has been edited. It's been formatted to fit ***
*** this screen ***

Went to the site, and wouldn't you know it - I use dial-up being out in the boonies like I am...

Well, it was worth it to see the download...

Now, for my two cents on just seeing the trailer...

In my view, this movie is a lot like "DUEL" - a remake of "someone makes insult to another, another attempts to payback the favor" - add infinitum...

Of course, we don't have an entire clue on the juxt of the plot but it seems to center around a torrid love affair with two young adults - LeeLee being a college student away for college, contacts her boyfriend, and the boyfriend grabs the brother and off they go to Colorado.

Along the way, they acquire a vehicle with a CB - so now we're on topic...

As P.H. suggested, and I looked to verify, the Cherokee 150's alignment of one of those knobs is way off - perhaps a return re-pack for "bargain basement" [Class C repack] uses. Hilarious!

I did like that meter, but like some radios I know of, it has a very forgiving meter - lots of cherries.

Anyway, the two brothers, on their way to Colorado - invite a trucker to spend some time with them in a Motel. The method is not unlike what you hear on a given Friday or Saturday night on channel 19 around here. Gee, maybe the writer is from Michigan? ;-)

Anyways, a murder occurs, but what may give an unusual twist is the follow up. Do we know the identity of the trucker? Or is it the Murderer going after the "kids"? Just who was killed? There's a brief blip about it from the Sheriff [always has to have some pivot point regarding laws] and a missing jawbone. [Forensics take note!]

Playbill can be a Stephen King, or Ray Bradbury, or Erma Physuodymn - one extreme to another. There might be some "gaps" that we can have fun with later. Any way you play it, it shows the CB as the invisible "Connection" that DUEL didn't. Can be a good thing, or a bad thing, you decide. DUEL left you with the questions about character, Joy Ride

may leave you with questions about the characters.

Watching the trailer left me feeling better knowing that there are limits. When a spectrum is abandoned by the FCC, what is left behind is up for grabs. Like "Mother Natures way of thinning the herd" - R. Greene, this movie falls into that "Anarchist" category I have for such movies containing inplausible motives with precisely planted morality twists that are portrayed to exist deep within minds that have had way too much coffee before bedtime. [Hey, even writers need a paycheck] This may help in believing why I don't take the radio too seriously.

May leave you with more questions than answers, or worse, you may have better answers to the questions the movie leaves.

On Wed, 25 Jul 2001 10:39:05 -0500, while the modem was busy tying up IRQ's with the Mouse, "Power House" <Power House @ My House (DOT) Net> dissertated the following:

>detrimental to safety.

Is it really the rise time, or the duty cycle that's causing the
problem? From the effects I've seen, it appeared to be more of a
result of the light being on not quite long enough to actually
pinpoint it, which gave the impression that it was monving in strange
ways.

>I could go into

>strobes.

What about the LED 'strobes?' Do they exhibit the same effect, and if
so, what frequency/duty cycle would minimize the effect, while still
providing the best possible indication of a hazard. Note that I'm
referring to the flat, inside-glass-mount ones used in pairs, as are
common on some emergency vehicles.

  While you're at it, bring the headers up from the hammie room
where you forged me then argued it was real. Can you do that?

Take a look at the post below.

"Nope. You can't do it, can you? Instant change of subject."

Then start thinking of a real good lie to cover this one up Twisted.
Your getting sloppy and one day you will slip up real good with no
chance to lie your way out of it.<essay snipped>

"I'll indulge you. You accused me of making a post. Naturally, I read
the post you accused me of making. What's wrong with that? You are
always crying for proof, I simply asked that of you with the post you
accused me of making. Please do look at the dates, then go back and see
what I was responding to when I made the comment about cotse. You
snipped it and attempted to apply it somewhere else. You still amuse me,
but only because you try so hard. I did go to cotse page and check it
out. If you think I would pay someone for the sake of angering you, you
are way mistaken, junior. Hell, leland, I can do that now when I'm not
even here. I'm part of you now, Leland. You are beyond anyones help,
except mine. Get used to it."

The 572B from Svetlana is spec'ed at about 300 watts PEP for one tube in a grounded grid configuation in a linear class B design. Go to the Svetlana website and down load the PDF datasheet for the tube, and then look on page two at the top.

http://www.svetlana.com/docs/tubeframe.html
(click on 572B near bottom of middle column)

All the Ameritron AL-811 series amplifiers use 811 tubes.

Anything is possible, but short of gutting a radio and putting it in a larger box plus a single or double transistor amplifier and an external antenna, probably not. More than likely he is outside at a high point in elevation. Given straight line of site they can work for several miles.

Well...kinda sorta both. I suppose "apparent illuminated duration" would
be the textbooky/geeky referent to the cause.

> result of the light being on not quite long enough to actually
> pinpoint it, which gave the impression that it was monving in strange
> ways.

YUP. If we were to chop the rise time off the apparent illuminated
duration of a rotating beacon, we might see the same effect. The
full-intensity flash of a rotating beacon might be of similar duration,
but the rise and fade time lengthen the apparent duration, causing the
effects you mention.

> > so the bottom line is: Use beacons that use halogen bulbs
> >with rotating reflectors in order to create your flashing warning lamps if

>
> What about the LED 'strobes?' Do they exhibit the same effect

Doubtful; I haven't seen LED strobes with as short a duty cycle as Xenon
strobes.

It could have been somebody using a GMRS radio, which shares the same frequencies as FRS channels 1 to 7. The GMRS radios run much more power than the FRS radios do, and requires a license to operate at $85 good for 5 years. The one license will cover everybody in your family.

For more information about FRS radios check out "alt.radio.family" news group. This news group deals expressly with FRS radios.

It doesn't surprise me if somebody were to be able to transmit about 2
miles.
Depending on terrain (flat, hilly), it is doable. Don't know about the
"mods"
thing. That wouldn't surprise me, either. Could be he put up an external
an-
tenna, etc.

Twist, you provide me and the group with a lot of entertainment.
Honestly, I would not want to see you tossed into a rubber room. It
would deprive us of many hours of laughter and diversion. That's why I
am curious why your sudden interest in Frank's antenna. Why - of all
things - is it so important to you that Frank have a "cb" antenna?

>thing. That wouldn't surprise me, either. Could be he put up an external
>an-
>tenna, etc.

No. Not with a FRS transceiver. However, an external antenna is possible with GMRS (which shares FRS channels 1 - 7, as well as having some unique channels.)

There are no mods for FRS for several reasons--primarily related to how these units are constructed. Another reason is that it is not practical. Increased power does not give significant range improvement, and it eats up the batteries.

Where have you been fore the last 27 or so years? The KRIS amp is most certainly an FCC type accepted amp. Even if it wasn't a type accepted amp, the seller is still complying with PART 97 rules by only selling to another licensed amateur. Licensed Amateurs can possess, buy, sell, build ANY rf amplifier, regardless of type acceptance. The only time a licensed amateur must conform to type acceptance regulations is when the amateur is attempting to market multiple amplifiers to the general public.

Hit the books buddy.....

PS: I use my KRIS Power Pump amp on 6 meters FM driven with a 5 watt HT and it works beautifully....105 watts or so peak.

With FRS it's all about the terrain.
Tripling the power (if you could) is just the same as standing on a garbage can with these sets.
However they cant be beat for the price with CTCSS for skiing, fishing and boating.
At 460Mhz + half watt a small stubby 1/8 wave antenna/radio can do a decent job.
At 27Mhz a small 4 watt talkies with 5 inch 'rubber ducky" antenna's are a joke.
Must be what.....1/32 wave ?
I have a GMRS sheepskin and get 20 miles lifeguard chair to boat with 2 watts (Motorola DPS)
and Antennax 1/2 wave antennas.
The old stock FRS Talkabout +'s did 5-8 miles over calm sea then died real quick and sharp,
1/2 mile around town, 2 miles car to car open road
,Joe

> Sopranos..LMAO!

Well, that's just typical Twistedhed. You have to understand the way he operates. Twisted says whatever is convenient at the time and then employs a (we assume unconscious) reflexive evasive strategy to deny any culpability. For example:

Twisted: "I invented electricity".

You: "Oh, you're full of crap. Prove it"

Twisted: "Prove what? Hahahaha!"

You: "You said that you invented electricity!"

Twisted: "I did? Where do you see that? Show me the headers"

You: "Right here, <Twisted: "I invented electricity">".

Twisted: "You guys are so obsessed with me! You follow me around like puppies, hanging on my every word! What a joke! Why won't you answer my question about veeblefetzers? Ha!"

You: "What's this got to do with veeblefetzers? You said you invented electricity. I asked for proof. Either you have it or not".

Twisted: "Whether or not I want to give you proof is none of your business. You won't answer the question about veeblefetzers and now I see you worship me".

You: "Huh? I don't worship you".

Twisted: "You do. Your constant avoidance of the veeblefezter question is a byproduct of that worship".

Etc.

Yes, some people have tried modifying the FRS units. I have seen posts saying something to the effect that turning a certain pot will make it louder. Not so. That simply increases the deviation (modulation) - which can result in distortion in the receiver. You'd be surprised what the stock units MAY be able to do. It is really a matter of terrain. UHF is line of sight. Line of sight is quite short. Rule of thumb is take your antenna height in feet, double it. Then take the square root of that number. The result is your radio horizon. If you are 6 feet tall, the antenna will be about 6 feet high. Twice is 12. What is the square root of twelve? Around 3.5 miles. This means you can communicate over flat ground for 7 miles (another similar radio has a radio horizon about the same. As long as the radio horizons touch or overlap, you should communicate). This is the expected maximum. Expect a couple of miles, typically. A friend uses one in his truck whilst towing his boat to stay in touch with his wife who drives the car. It works well for maybe half a mile (from INSIDE the vehicles!!) - sufficient for their needs. For good range, you need the license to use commercial repeaters (or an amateur license to use amateur repeaters). Then expect 20 miles or more with a good gain antenna (maybe 15 inches long) to a repeater - and another 20 or more to another handheld unit (or 40 miles or more to a mobile). Many security services use handhelds which communicate to a base which has an antenna mounted up hundreds of feet on a tower. This, of course, allows communications over quite a wide area.

I would first make sure the mic is working properly, If memory serves me, the mic needs to plugged in to hear, and if you have a bad wire in the mic. this may be the problem.
If not, sounds like the receive amd transistor has gone bad.
Hope this helps...

Never heard a thing Twisted, and NEVER expect to either! I'll bet they're so tired of your screwed up complaints against the wrong parties that they will just can your E-mail without ever bothering to read it. I really hope you do bug the devil out of them. Then that ISP can call your ISP (WebTV), then I'll bet your account gets zapped. Want to try it?

Subject: You make me crack up laughing!
Date: 2001-03-05 14:28:05 PST

(Doug's colorful intro snipped)

>The only time anything you say matters beyond a fart in a windstorm is when
>you post something like that dead fish in the mail story, then it just cracks
>me up.
> Toledo is 100 miles from Cleveland. I am curious to know the date the
>package was mailed, as I know I have not been anywhere near Cleveland since
>November. I really dont care what you post or to whom. Bitch and moan all
>you want, cuz it is damn funny to me. Not only is it funny, it provides endless
>amusement for me and for whoever did mail you that fish.

<<This individual, who I believe
to be one Douglas Adair, of Toledo, Ohio, has also been posting pornographic filth to the ng and claiming participants of the newsgroups
to be subjects of said pornographic material. Much of what he has done in the past has been taken with a grain of salt. However, it is clear that he has become intent on doing malicious, and possibly physical damage to participants by repeatedly forging nics, domain addresses, and
threats of a more serious nature. Due to the threatening nature and tones of his more recent posts, I believe he has conspired to carry out
personal vendettas and intentional character malignments, and possible violent acts upon the group. This is not the first time he has threatened a participant in usenet, as it has always been of the usual mundane nature....IE: "I'll kick your ass". His more recent threats,

however, have to be taken on a more serous level. At present, there exist twelve participants in the ng, willing to sign sworn affidavits attesting to verbal attacks, forgeries, pornography, and threats posted
by Mr. Adair on the ng. We conveniently also have all of his threats compiled in chronographical order as well, which you will find attached
and dated. I believe this message to be of particular interest above all others, due his threat of utilizing the US Mail, and obvious growing
frustration and hostility so clearly directed towards me and demonstrated in his posts. The intent on his behalf, clearly is not for
me to decide. If any other information is necessary, please do not hesitate to contact me at the number below.

Thank You,

John M. Gyer

Hello Aaron:

Yes great advice all right!

The sweep tube amps aren't as bad as everyone thinks in spectral purity. But the cost of buying 12 or more of the obsolete sweep tubes, that use to cost 3 dollars each, and now are 50 dollars each, plus, just doesn't cut it.

Again its much wiser to purchase a ham amp, say with a single 3CX800 than to pay for multiple tube replacements and replacing the cheap designed power supply components and all the other cheap, designed to break CB Crap!

The spectral purity is better, the reliability is much better, and resale value is way much better. Is that proper eNGLISH?

The moral of the amp buying advice is:

Its cheaper and better in the long run to buy a ham amp. I think the Ten Tec amp that uses a 4CX1600, and can easily crank out 2500 watts goes for around 3 grand. Think how many times you have went to the guy to have your amp fixed, repaired, retubed, flames extinused, melted front panel replaced, melted power cord replaced ect ect. The 3 grand is a drop in the bucket, as compared to a long life of amp repairs and disappointments.

Rock on.....

Jay in the Mojave

I'm not a chicken bandit but I am curious about one thing.

It's obvious a lot of you all are running more power than ,well, the law exactly specifies. Not that I care, unlesss you interfere with my lawful activities, in which case I get out a DF loop and my 1200 Super Sue with the secret prototype IF Block Mod (Hi Prentice!)and stalk you down.

However all the books say that for maximum AM efficiency, we want to modulate the finals, not amplify an already extant carrier. So, why aren't we seeing tuned final amps that have plate modulation? Use the commercial xcvr as a rx/exciter and run it into the amp, possibly running a predriver, and modulate it.

Just curious.

5873. FS: Amperex 6907 transmitting tubes

Newsgroup: rec.radio.cb
Date: 2001-07-26 21:32:18 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20010726173218.00420.00001185@ng-mr1.aol.com>
Source record: 90012

I have a pair of Motorola boxed Amperex 6907 transmitting tubes that I want to sell. I have no way to test these, but they are in perfect physical condition. I have a picture posted on my "yardsale" website at;

http://members.aol.com/ecc81/yardsale

Asking $80 for both.

Interested? Please respond BY EMAIL to < OvrReactor@aol.com >.

Regards,
Tom Mitchell

>Is it legal, in the US, for an amateur to use a radio that can tx outside
>amateur
>bands if he only ever uses it within bands he is licensed for?

Yes, it is.

>EG. Are novices allowed to use an hf radio that covers all bands?

Yes, good example. A Tech "+" using a Yaesu that can tx from 0.5 through
29.9999MHz to tx only on the hf "novice sub-bands."

As I remember it Twisted also claimed to get a dead fish too. Now if the story about the jock strap is false then Twisted is caught in another lie. Either way he looks like a mentally disturbed clown on one hand, that talks to "saucer men" and uses "jock straps" to decorate his domicile, or a pathological liar. He dug himself a hole he can't get out of with that story.

> Expect a couple of miles, typically. A friend uses one
>in his truck whilst towing his boat to stay in touch with his wife who
>drives the car. It works well for maybe half a mile (from INSIDE the
>vehicles!!) - sufficient for their needs.

The one "bright spot" on the FRS scene is the Radio Shack Mobile Unit (currently on sale for $49 through July 28).

A unique construction technique allows the antenna to be mounted on the roof of the vehicle, while keeping the radio legal. Where you typically get .75 miles car to car, adding the RS Mobile to one vehicle can increase this to 1 to 1.5 miles, and two such units can communicate from 2 to 3 miles.

These units are powered from the cigarette lighter socket, and are not designed for handheld operation. These are full-featured radios, with .5 watts, 14 channels, 38 CTCSS codes, and scan functions.

I have a 200 GMC Sonoma that I'm putting a CB in. I pulled out the ashtray because I don't use it and it gives me a decent place to put the CB. Can I hook the CB power to the plug for the lighter? I can't see why this wouldn't work but wanted to check and make sure I wasn't missing something.

Thanks Charles

There is not one handheld 27 MHz CB worth it's weight in BS. You will be much better served with mobile CB's and decent antennas. You will get the same range HH to HH with FRS, only FRS will be clearer.

The babble above is pretty sad, isn't it?

The fact is that Twisted can't keep up with the day-to-day repartee
that hee initiates in the newsgroup. By Friday it all gets too much
for him. So he must threaten to take out his frustrations on the
weekends by going to the freeband and shouting the call letters of
hams that have wounded his ego.

(Picture an angry delinquent going into an alley and banging trash
cans around and shouting while a few of his delinquent pals look on.
Even though the noise is never heard outside the alley, the exercise
makes him feel good)

i would venture to say that most hams could care less about
rec.radio.cb or cb in general. it is just some of these techies that
seem to have a problem with us. and for that i have no explanation. i
say again. ham is ham , cb is cb. there is no connection
whatsoever.....that is why we have different
newsgroups.....

I had my two meter rig on one of the various local repeaters the other day,
A guy walked into the shop just as the "courtesy" tone came on and asked me,
"What kinda funky roger beep was that?" What a joke, you old snobby types
ain't any better than anyone else. As usual, Look in your own back yard
buddy!!!

That's okay, the CBers here really enjoy those cool multi-tone roger beeps
you try to pass off as "courtesy" tones.

Ha Ha!!!

Try again!

Charlie.....KA4CMT

5895. GemTronics AC / DC CB

Newsgroup: rec.radio.cb
Date: 2001-07-27 00:55:56 UTC
From: fmaxsc@hotmail.com
Message-ID: <3b60bb21.513112694@nntp.ix.netcom.com>
Source record: 90044

Have a 23 channel GemTronics CB. Operates on AC or DC and has a built in clock and alarm with a simulated wood cabinet. Has ANL, PA, NB, and a built in SWR meter. Looks great and works great. Would make a lovely piece for someone to collect as a 70's radio!

$45.00 plus help on the shipping.

Please e-mail

Thanks,

Fred

>"What kinda funky roger beep was that?"

Roger beeps and courtesy tones each have a use.

The presence of a tone does not make or break the user.

Even FRS radios have end-of-transmission beeps. Want to make something of it?

Over.....or shoudl I say, "BEEP"?

>work but wanted to check and make sure I wasn't missing something.

Should work okay, Charles. Make the connections very FIRM, and insulate the connections to avoid future problems if the wires rub on the rear of the dashboard.

Note that the power cable for most CB's has the fuse a couple of feet from the radio. If you are trying to keep things neat by chopping off some wire, make sure you retain the fuse for the radio. Cut the wires and remove the excess if you need to. But reinstall the fuse in the positive line during the installation.

The cigarette lighter is fused, but at a very high amperage. If something goes wrong with the radio, you'll want the power turned off much sooner than 15A.

Yup, repeaters that sound like caliopes drive me bug-fucky as well and have probably contributed to the continuing decline of 2 meters.

The repeaters I built solved the 'quick-thumb' completely differently. The IDer was keyed from the Not-COR but was kept from triggering on each transmission by a timer. A new machine IDed every three minutes or so ultimately set to seven plus transmission time. When the local quick thumbs were obliterated by 20wpm of square-wave audio CW at full deviation, QTing came to a rapid and grinding halt without the need to drive your control ops and frequent listeners to the booby hatch.

The only good use of tones I have ever encountered is to put the 3-tone 'number disconnected' burst on the head end of an answering machine, thereby causing all the telemarketers equipment to permanently take you off the lists.

Beyond that, bloops and bleeps are for children, CB or Amateur.

Dick NBK

5901. Where to find manuals?

That's what I was thinking. Plenty of juice there and I'll defiantly
keep the CB fuse.

Before you finalize the wiring setup, check the radio with the engine running to verify that you don't have noise coming in via the wiring. It often happens when connecting a radio via the wiring harness. If it is a problem, wire directly to the battery and remember to fuse liberally.

Hello.

I'm interested in the biological effects of RF.

I am not involved in any related commecial venture
in this area, but I would like to test the accuracy
of a theory. The current crude version ("Thermal
and Nonthermal Mechanisms of the Biological Interaction
of Microwaves") is posted as a preprint at:

http://xxx.lanl.gov/abs/physics/0102007

for anyone interested.

A correpondent has mentioned that a friend who
recently obtained an amateur radio license says
that he sees "stars" when he operates his 4W
handheld transmitter for prolonged periods
with the antenna close to his head.

This happens to fit to my own impressions,
which I would describe more as a case of the
"fortification illusions of migraine" (I guess
I can use technical jargon in a technical
newsgroup?).

The exact cause of these visual impressions,
which resemble sparkling afterimages after
looking at a bright light, is unknown; but, a
reasonable idea would be that they result
from changes in blood pressure in or near
the visual regions of the brain. They may
represent slowly spreading seizure activity
in the neurons, too. There is no pain or
other feeling, and they seem to disappear
after a few minutes with no obvious
long-term effect.

Question: Has anyone in the group noticed
this? If so, I would be interested in details
of the conditions under which it occurs:
Transmitter characteristics, time-transmitting
duty cycle, length of transmission until the
effect begins. Location of the antenna
in relation to the body.

Other effects also would be interesting. A government report cited in the preprint documents tinnitus (hissing or high-pitched keening sounds) caused by wideband radar pulses; tactile sensations and blood pressure effects have been reported, but any repeatable, reliable effect on the body would have significance.

I have no connection with any government, but I am very interested in (a) better understanding how RF interacts with the human body; and, (b) being able to specify proper filters for wideband RF sources, so that undesirable biological response would be prevented.

What a mix-up here:
I used (bypass) .01uf disc capacitors to shunt the RF to ground before it travels into the cars wiring harness.
This is done by placing the capacitors to ground from the window coil connections in the back window

>"Thin" RG-8u
I dont have the exact number but it a highly shielded (thin like RG-58) for VHF

Most dont know how to make em, a 100 watt Dynaco works real well with a
exciter pushing some 811's
(after you change the transformer).
Then use the R-390 to receive.

I've never taken mine mobile. Tell the truth, it doesn't look to me like it would stand life inside a vehicle. Just my opinion. I have had a year of trouble free operation. I have not noticed any problems. I have not had it checked as to accuracy though it seems to be able to pick out slight variations between radios. When switched between radios, it measures each radio the exact same, each and every time. Measures average and peak. Lighted face (110v). Nice meter! What, exactly, do you mean by "Detachable Face"?

I've got another question. In the book for the CB it says that the power and antenna wires/cables should be as short as possible. I've also been told that you shouldn't change the length of the antenna cable that comes with the antenna because they are "tuned". I don't see any harm in cutting excess power wire but what should I do with the antenna cable?

Thanks again

Hi QRM,

Every once in a blue moon, you actually find what you're looking for.
I contacted the owner of an Amateur QRP CW kit manufacturer and
explained what I wanted to do along with a brief history of our
activities to date. I didn't know what type of response to expect so I
hoped for the best but braced for the worst. I was pleasantly
surprised with an e-mail that "applauded" our efforts to use CW on CB.
He explained how to do this with his product while remaining legal and
it really wasn't all that difficult at all. The "hard sell" was never
put on me, it was his helpful attitude that made that decision easy. I
wanted to get two units but that gets a little expensive. So, lo and
behold, what do I come across while surfing through ebay?

http://cgi.ebay.aol.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1259118822#BID1

Fits the bill just about right. There's the latest update. I hope this
is a decent unit. The price is certainly right and it appears to be
just the type of affordable unit that would be nice to market to
younger folks to get them interested in Morse. Don't misunderstand me,
I've been accused of always being "middle of the road." I don't wear
any halo and I'm not a CW/Morse fanatic. While I don't violate any FCC
rule/reg "biggies," (At least, not in a very long time.) I still
occasionally sidestep two, one Part 95 and one Part 15. What I am is
very passionate about radio, be it amateur or 11 meters. I recognize
that I need CW to operate where I want to on the ham bands and I'm
very loyal to the band that got me interested in worldwide
communication via radio to begin with. If I can practice one while
improving the image of the other, then so much the better. When
corresponding with an older ham acquaintance via e-mail, he was
impressed (and admittedly enthused) that the effort to research the
rules and even attempt to make this work had even been made. This was
a guy who used to rib me that all CBers were lazy and/or afraid of the
code. I'll enjoy hf on the ham bands, but with 2003 right around the
corner, I think it's quite prudent to try and help improve the image

of the 11 meter band...one operator at a time or even if only by one dit at a time. Take it easy.

Ahh, being a bit sarcastic eh? Thats what Ive always loved about this NG.
The obvious somehow gets exploited for the amusement of others. The word was
peak not *peaks*.

As you very well know Dick, when an amp is aligned and tuned properly at
some point the amplifier will maintain a peak output. Try running your radio
or amp on FM at a 4:1 match and tell me if your FM output has
peaked...................

There are years of voodoo with regard to coax length. If the manufacturer is saying you shouldn't change the length of the coax, it means, reading between the lines, that the antenna isn't very good and that it can't be made resonant. RF is going out the shield of the coax as well, and the coax is acting as part of the antenna. In terms of pure physics, the antenna is the resonator. The coax transmits the rf to the antenna, and the only thing you want is the shortest length reasonably possible. When you get to greater lengths, say a couple hundred feet, then attenuation of signal becomes an issue. A properly tuned antenna will display the same swr characteristics regardless of coax length.

BUT AGAIN, install the radio where you think you want it and experiment a bit to make sure that engine noise is not an issue, and then adjust the length of the antenna to get the pest swr near the middle of the band, about channel 20. If you need to add electrical wiring, use larger rather than smaller to avoid voltage losses. If you need to shorten the coax, fine, but use good soldering techniques on the new PL259. Under absolutely no circumstances should you ever use one of those cheezy screw on connectors. If you don't cut the coax, coil the excell into a circular bundle with a diameter of roughly 6 inches and secure with twist ties. This creates an rf choke.

This one has been around for years... I'm sure a couple of the old timers
in here may have recognized it... It has been posted here a couple of times
in the past... Funny as hell though, I must admit.. :)

All it is is a QuickTime file... I'm surprised that you do not have QuickTime... There are three basic players out there that handle just about all media types, and everybody should have them... Windows Media Player, QuickTime, and Real Player... In any case, the file is your mailbox....

So what? Are you a ham? It appears that half the contributors to this NG are Hams.....that makes this NG a viable marketing tool.

If you knew anything about the law or the rules for that matter, you'd know there is no such thing as *intending* to break the law. One either breaks the law or they do not.

Stop your charade by making sense instead of making noise.

5938. Wanted: Raytheon/Apelco/Webster CB equipment

Newsgroup: rec.radio.cb
Date: 2001-07-27 14:53:17 UTC
From: k5dh@raytheon.com
Message-ID: <xff87.3$z%5.86@dfw-service2.ext.raytheon.com>
Source record: 90077
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.cb

Looking for Raytheon, Apelco, and Webster CB equipment,
literature, manuals, brochures, parts, crystals, mics,
and so forth, for my Museum collection. Specifically
looking for the following models:

Raytheon:
Tube-type: Raycom, Raycom II
Solid-state: Raycom III, Raycom IV, TWR-9, TWR-11
Hand-held: MW-2, Ray-ette

Apelco:
Tube-type: AR-9, AR-10

Webster:
Tube-type: Bandspanner Four-Eleven
Solid-state: Bandspanner 550
Hand-held: WT-2

Please drop by my on-line Raytheon CB museum:

http://www.qsl.net/k5dh/raytheon.html

news:20010726182539.08136.00001197@ng-fp1.aol.com...
> it uses either one

I know the 811 can be replaced with the 572B, so they say, however look at the tube curves first. The 572B's are on-line and I have the ones for the 811 RF version of the tube, at home, before they were removed from the website. The 811 datasheets on-line are all for audio use. The 572B is not very "linear" at the low end. So unless the amplifier has some way to bias the 572B grid up a bit the amplifier will not work as well. If the bias circuit is left in for the 811 the tube will draw too much anode current. The referenced 572B amplifier article specifically mentions the non linear operation over a section of the tube curves. So don't believe everything you hear Tim. As I tried to point out many times before, to you, what seems a simple mod has traps waiting to catch these who don't pay attention to the finer points of design.

The consequences of using the 572B where a 811 was used, with no grid bias applied, are audio distortion and increased RF harmonic production.

The audio distortion is the result of at least two sources that I can think of at the moment. The first is clipping due to Class "C" operation of the 572B at low signal levels, and second IMD (intermodulation distortion) products due to the non linear characteristic of the tube at low drive levels.

Just from inspection of the 572B tube curves you can easily see there is no significant flow of anode current until the grid voltage is up several volts. That means the tube is in conduction less than 180 degrees, thus resulting in Class "C" operation, and clipping of the modulated RF envelope. Since the peaks of the RF envelope should follow the audio signal the recovered audio from the modulated RF envelope with be clipped, i.e. distorted.

It can be proved that any continuous periodic signal can be decomposed in to a sum of individual sine, or cosine, waves at discrete frequencies and phase angles. The resulting sum is called a Fourier Series. Just to make things simple we will assume our signal is composed of just two tones, F1 & F2, so we get S=sin(2*Pi*F1)+sin(2*Pi*F2). Since the anode curves are not linear the resulting signal can be represented as a power series like Z=A+B*S+C*S^2+.... Now if you substitute the right side of the equation for "S" for the "S" term in the right side of the equation for "Z", then perform the multiplication for the "C*S^2" term, simplifying the result, you will find terms like "cos(F1+F2)", "cos(F1-F2)", "cos(2*F1)", and "cos(2*F2)". As yopu can see you get harmonics of the two original tones "2*F1", and "2*F2". You also get the IMD terms too, "F1+F2", and "F1-F2". If you repeat this

exercise for the higer prower terms in "Z" you will find in general the IMD terms will be (n*F1+m*F2), and (n*F1-m*F2), where n and m are integers. The problem with some of the IMD frequency terms are they culster around the original frequencies, thus making the signal occupy more bandwidth than is need. That's why you hear some of the idiots using amplifiers splatering over ajacent channels, their signal is too wide, and a RF filter will do nothing to fix it either.

The problem with Class "C" operation is the increase in harmonic content of the anode current waveform itself. There is a very significant level of harmonics in the anode current waveform under Class "B" operation too. There are two main functions performed by the output section of a tube amplifier, one is load matching, second is harmonic reduction. The normal 50 ohm load as seen at the output of the amplifier is transformed to the proper load impedance for the tube's anode, which allows the tube to run within its' rate voltage and current specifications. The low pass nature of the output network acts as a filter, which eliminates almost all frequency components above the fundamental. The "Q" of this output section must be high enough to do the job. It is very easy to cobble together an output section to allow proper loading of the tube, but the "Q" is way too low to reduce any harmonics in the output to acceptable levels. Now if amplifier operation shifts from Class "B to Class "C" the level of generated harmonics increases then the output section may not do a good enough job of keeping the signal clean. Sure you still get you power out, but now the amplifier may be more "dirty". The only sure fire way to be sure is to check the amplifier on a spectrum analyzer.

Of course the same thing applies to transistors too. If you look at the data sheets you will notice some are "rated" for either Class "C" or SSB service. Yeah you could use the Class "C" rated device in a linear application, but don't expect the IMD performance to be good. Now you know why some Ham refer to those cheap CB linear amplifiers as "splatter boxes", there is a reason for it.

If you have ever looked at reviews of Ham Radio linear amplifiers you will notice that they are tested for both harmonic generation and IMD performance. Excessive harmonic generation will interfere with comminations way up the spectrum, and poor IMD performance will cause interference to stations near by frequency wise.

Isn't "mobile" a misnomer in some sense as you still have to be hooked up to a vehicle? I'm sure you could make a back pack with a "mobile" CB and a deep cycle battery, but nowhere near as portable as the hand helds.

Question: On average won't a hand held CB out perform a talkabout? Given that you use a decent external antenna for the hand held or a good (forget the right name) duck antenna...

If I were to go and get the basic HAM radio permit what sort of options open up to me for portable radios???

Thanks for any replies with information,

Curtis

MFJ makes a relatively inexpensive wattmeter for low power hf.

They don't use channel 6 that would disrupt the skip talkers etc.

Where do you see anything about hacking and stealing passwords. Did you read what he was asking for Your the big computer guy right don't you remember what you posted. Why would he hack your computer then post his own real name and e-mail address expecting a reply from a NG. Do you think we are as stupid as you were when your boyfriend made the post. Yeah ok let me hack you then post with my real name to a NG.. Hahahahahahahaha You are too funny. Fag boy!

OK. You are definitely breaking the law.

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or lease), or
import, ship, or distribute for the purpose of selling or leasing or offering
for sale or lease, any external radio frequency amplifier or amplifier kit
capable of operation on any frequency or frequencies between 24 and 35 MHz.

> Stop your charade by making sense instead of making noise.

So what band are you getting your "105 peak watts" out on? -A

>
> Just curious.

Greetings, There are several problems that you run into building such a beast or even converting a commercial transmitter. You ALMOST have to be a well versed engineer to keep the parasitic oscillations out at frequencies above 20 mhz as well as incorporating a good neutralization circuit. It's been done many times before but not usually by your avarage Joe operator. In a commercial set, this would mean completely redesigning it. As for homebrew, much large iron is needed (transformers) to get the job done. You need a modulation transformer, a modulation power supply transformer, a final amplifier power supply transformer and a filament transformer. To really do it right, you may want to incorporate chokes in your power supplies. This runs the cost way up. Some of the smaller transformers (interstage) are just plain ol' hard to find. Then there is a safety factor. You are talking about working with voltages of 1500 and above. I heard of one guy south of the border who's gold chain neckless fell across the plate of a high power tube. He didn't live to tell his kids about it. Your best bet is to use some of the 50's ham transmitters. Right now the prices for these are through the roof. So unless you are extremely passionate about your hobby, you are better off going the way most high power stations are going. Hope this answers it for you. JP

....over a wide area of spectrum, you mean. These idiots don't care
if their setups have spurious radiation, harmonics, etc. because they
have no way of measuring anything like that, so their ignorance is
indeed bliss.

As far as specific frequencies go, it might be channel 6, 8, 11, or
whatever strikes their fancy. The whole idea behind keydowns is to
interfere and overpower. Do you think they care about any other
stations except themselves? The answer is no.

Paul, Saying the Max output would have made more sense since with a FM signal your power output doesnt vary unless you change it. Any use of the word peak leads people to believe you mean peak power.

>Question: On average won't a hand held CB out perform a talkabout? Given
>that you use a decent external antenna for the hand held or a good
>(forget the right name) duck antenna...

Not in most cases. Remember that you're going to have a *lot* more
interference in the CB band than you'll find in FRS for most areas.

>If I were to go and get the basic HAM radio permit what sort of options
>open up to me for portable radios???

Lots. With the Tech ticket, you'll get access to 6m and up. FM handhelds
are easily available in most areas for 2m and 70cm. With a little more
effort, you can get 6m, 2.1GHz, and others. Power range on the handhelds
is anywhere from 200mW to 5W. A pair of 5W HT's will outtalk a pair of
FRSs any day, and even on 70cm, you can get great simplex range and
relatively few others on the band to interfere with your comm. Throw an
open repeater into the equation, and you can easily talk across town.

If you decide to get the license, you'll probably do best with a pair of
dual band HTs for 2m/70cm. That way, if you get tired of chatting on 70cm,
you can drop down to 2m where most of the action is.

Pal you are a beauty. If you could read and comprehend your own caption above you'd understand that Section 2.815 is for distrubution of amplifiers to the general public, not licensed amateurs. The original poster placed his amp for sale with a caption denoting that he would only sell to licensed amateurs, so stick to the facts. This statement complies with all Part 95 and Part 97 FCC rules and regs.

Go blow your smoke up some other chimney. You must be a big man with the 14 year olders down at the school yard because there probably the only ones that actually believe your BS.

Below are the real Part 97 Rules whick Ill post for your enlightenment: Make sure you read sections (b), 3, 4, and 5.

<excerp from FCC Part 97 Rules and Regulations>

§97.315 Certification of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of certification from the FCC.

(b) Any external RF power amplifier or external RF power amplifier kit (see §2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be certificated for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:

(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:

(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.

(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

(3) The amplifier was:

(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the amateur service may be marketed for use in the amateur service.

What device can I use to measure power output (ie Watts)? I have an old radio and am curious about it's power, it doesn't seem to be up to my new radio standards using the same antenna.

>
> Just curious.

The first thing you do is ditch Antique Modulation entirely but that is another issue. It was outlawed in 1972 for services where lives, property, or money were at stake. It lives on aircraft radio (VHF) because of tuning considerations and the unacceptability of the FM 'capture effect' but beyond that Broadcast is the last bastion of Ancient Mary except as a nostalgia trip.

Trying to Amplitude Modulate a transistor is a basically unnatural act because the relationship of collector current to collector voltage is virtually non-existent. Tubes lend themselves to AM because there is usually a range where plate current doubles when plate voltage doubles, the so-called 'square law' area. Transistor modulators are basically audio-keyed current regulators.

The biggest reason you do not see plate modulation any more is cost and technical acumen. So you have an amp running a kw in CW/FM mode. The only thing you will probably have to do to it is back it down the curve a bit to keep your output in the square-law area which will cost you a few watts and a bit of efficiency. But in the plate line you need to attach a modulator wired and matched to a 500 watt audio amp or 'modulator'. This is in effect a second transmitter with its own power supply, and a hefty one at that, and designed to incorporate both frequency and level compaction which puts even more strain on the power supply. A modulator is not a piece of tin.

Back in the days, modulation transformers were available with a ridiculous number of tap ratios to insure that at 100% modulation, the plate voltage swung from 0 to twice the normal with a similar effect on plate current.

This, of course, means you have to pay attention to the plate tank to handle the peak power; AM was often 'arcing modulation'. Now and again one of these beasts shows up at a flea market and I grin.

For that reason, broadcast stations have been trying to find a better way since the Hoover administration. Newer units use some digital magic to keep the cost and heat in bounds. Back in the days it was not uncommon to get to 50 kw with two 25kw FM (yes, FM -- hopefully without preemphasis) transmitters 135 degrees out of phase yielding about 35kw. It is not uncommon for some AM rigs to back the carrier down at an almost sylabic rate to save on final life and electric bills when the audio does not demand full-bore carrier. Some variants of this are sold to CBers who define modulation as the difference between no talk and peak power in the form of 'swing kits' -- one more way to separate a sheep from the contents of his wallet.

My amp goes to 11, man!

>distrubution of amplifiers to the general public, not licensed
>amateurs. The original poster placed his amp for sale with a
>caption denoting that he would only sell to licensed amateurs,
>so stick to the facts.

OK.....let's look at the facts. Here below is the original posters ad
(a page link). As you can see, he says he used the amp with an RCI
2950. So "pretending" he's a licensed ham using the amp on 6 meters
doesn't wash.

And no, he never states he will sell "only to licensed amateurs". Like
most outlaw CBers, he includes the phrase "legal for amateur use
only". Many illegal CBers think this makes an illegal act (selling a
contraband cb amp) legal. It does not.

==========
Kris INC. TUBE AMPLIFER
$150.00

This is a 25-55 MHz (12-6 METERS) Tube Amp. I purchased it new about
a month ago but, it destroys my neighbors TV so my loss your gain!! I
was using it with a STOCK RCI 2950 and with 4 watts in I was Getting a
60-100 watt dead key (depending on how it's Tuned) with a 125-150 WATT
SWING!! I HAVE NEVER HEARD A AMP. AS CLEAN AS THIS ONE!!!

You Don't need a meter to tune up....it has a light on the front of
it...the brighter it gets, the more power it puts out!!
ï¿½
It Weighs about 25lbs,
It GREAT WORKING ORDER!!ï¿½

Shipping is paid by the purchaser, Money Orders only

*****"LEGAL" FOR AMATEUR RADIO USE ONLY*****

Sold as is, but WILL NOT BE DOA!!!
E Mail Questionsï¿½
==========

>This statement complies with all Part 95 and Part 97 FCC rules and
regs.

What statement? Saying the amp is legal for amateur use only? Are you saying that by making that statement he is complying with Part 95 and 97 and is free to sell to CBers? Please show me where in Part 95 and 97 it says that one must make that disclaimer when selling an amplifier.

>Go blow your smoke up some other chimney. You must be a big man with
>the 14 year olders down at the school yard because there probably
>the only ones that actually believe your BS.

I'm just stating the facts. Sorry if you didn't do your research before shooting your mouth off. You must be angry for being exposed as such an ass.

>Below are the real Part 97 Rules whick Ill post for your
enlightenment:
>Make sure you read sections (b), 3, 4, and 5.

(other sections snipped to get to "3,4 and 5")
>
>(3) The amplifier was
>
>(i) Constructed by the licensee, not from an external RF power
amplifier
>kit, for use at the licensee's station;
>(ii) Modified by the licensee for use at the licensee's station.
>
>(4) The amplifier is sold by an amateur operator to another amateur
>operator or to a dealer.
>
>(5) The amplifier is purchased in used condition by an equipment
dealer
>from an amateur operator and the amplifier is further sold to another
>amateur operator for use at that operator's station.

So sorry. You've struck out on ALL COUNTS.

*The person selling the amp does not state he is an amateur, gives no call letters, and further admits that he used the amp with an RCI 2950, and boasts about its "swing".

*The person selling the amp does not state he will limit sales to licensed hams.

*The person selling the amp did not construct the amp himself or from a kit.

The regs you quote have no bearing in this situation. One must conclude that you are either a fool or have intentionally misinterpreted FCC regulations in an effort to falsely justify illegal distribution of an RF amp meant to be used on CB.

Subject: Swap File and MaxPhysPage(in system.ini) settings
Newsgroups: comp.os.ms-windows.setup
(This is the only article in this thread)
Date: 1995/05/28

I need to know the proper MaxPhysPage setting for the system.ini for
WFWG 3.11. I have 20Mb of physical RAM (20352Kb). The format is:
MaxPhysPage=<hex page number>, where <hex page number> is the maximum
physical page of RAM. I read that windows only recognizes the first
16Mb of RAM. I have an 11Mb Perm Swap file, but when I start windows,
I have only 23Mb free. Any help is greatly appreciated.

And you know the spectrum of the guys 2950? Is he running a transverter? How do you know this.....Crystal ball? Jeanne Dixon your aunt?

> And no, he never states he will sell "only to licensed amateurs". Like
> most outlaw CBers, he includes the phrase "legal for amateur use
> only".

You make many assumptions and guesses before you summate a conclusion which equates to nothing more than a *best guess*. Violation of laws are based on evidence, not guesses.

>Many illegal CBers think this makes an illegal act (selling a
> contraband cb amp) legal. It does not.

The seller never stated he was or wasnt a ham, so all of your rhetoric is for naught.

>Please show me where in Part 95 and
> 97 it says that one must make that disclaimer when selling an
> amplifier.

I dont have to. Its up to *you* to legitamely prove the seller isnt a ham. Guys like you should spend a night reading the Constitution. It might make for some informative reading.

> I'm just stating the facts. Sorry if you didn't do your research
> before shooting your mouth off. You must be angry for being exposed as
> such an ass.

Youve presented no facts. First, you guess that the seller isnt a ham, which is nothing more than an assumption. Then you try to justify your *best guess* by citing a non-applicable administrative statute from Part 97 in a weak attempt to make yourself appear knowledgeable of the rules, which, by the debotchery of facts that you presented, you clearly are not. Then, to finish off your usual *dog and pony show*, you attempt to divert the burden onto whom you are debating, which works pretty well in the eight grade however some of us have matured past this type of behavior.

All it took was 3 postings for you to demonstrate your total inability to debate and comprehend written facts and administrative law. I would have thought with your experience at bamboozling people on this NG that it would have taken at least 6 or 7 postings for the jig to be up. You're not even a challenge.

> >amateur operator for use at that operator's station.
>
> So sorry. You've struck out on ALL COUNTS.

How so? Man you love to make wild guesses. You have absolutely no idea of what is applicable, especially Sections (4) and (5) above which can very easly apply.

> *The person selling the amp does not state he is an amateur, gives no
> call letters, and further admits that he used the amp with an RCI
> 2950, and boasts about its "swing".

He doesnt have to identify his call in his ad. Part 97 clearly states that it is the burden of the purchasor to investigate whether the selling source is reputable and legitimate. If not, then a violation has occured.

> *The person selling the amp does not state he will limit sales to
> licensed hams.

You dont get it do you?......He doesnt have to prove *anything* to you, he has to prove it to the purchaser.
Why dont you start buying these amps from these people and prove what you are saying is correct instead of guessing?

>*The person selling the amp did not construct the amp himself or from
> a kit.

And how do you know he didnt by the amp from a licensed dealer (Section 5) or from another amateur (Section 4)? The bottom line is that you can't. You can play this smoke and mirror game with everyone on this group however you should understand that your actions clearly demonstrate your abilty and experience with Part 97 Rule and Regs, which is weak at best.

My suggestion to you is to get real.............

> high power stations are going. Hope this answers it for you. JP

This is partially accurate and partially bullshit on stilts.

The same HT supply could run the modulator and the PA. You do not
need more than hi-fi amp voltages for a hundred watts Class C RF
power, a pair of 6L6s PP for the mod and another pair in parallel as
finals. The practice of using two pairs of the same tube-or three,one
set strapped as diodes for rectifiers-is somewhat common. Classic
Gates uses two pairs of 833s in just such an arrangement.

Choke filtered P/S preferable but not absolutely necessary.

Yes, some solid engineering is needed but, when hams were hams, they
did this all the time. (The 6L6 may be a little over its head at 11
meters-I know 6146s aren't.)They didn't have spectrum analyzers
either, today, everyone in RF does.

5983. Any Good Small CBs?

Newsgroup: rec.radio.cb
Date: 2001-07-28 02:39:53 UTC
From: KirkCaptain@webtv.net
Message-ID: <6057-3B6225F9-126@storefull-104.iap.bryant.webtv.net>
Source record: 89972

I want to put a small CB in my vehicle to listen to channel 19 on long road trips. Transmitting isn't as important as reception for me. I just don't want it to take up much space. Are there any good ones currently available, or are there any good older no longer made ones I should look out for? I have this feeling about most electronic devices that "new" means
"built so you'll have to buy another one from us in a couple of years."

5984. High swr

Newsgroup: rec.radio.cb
Date: 2001-07-28 03:06:26 UTC
From: GIMPYS@webtv.net

Source record: 89973

Just put up a radio shack base antenna. Have high swr across all channels. Coax shows no shorts. Even grounded radio to a ground rod with no improvement. Would trimming the antenna help, even though I have 3+ readings on all channels?

> In the book for the CB it says that the power
>and antenna wires/cables should be as short as possible. I've also been told
>that you shouldn't change the length of the antenna cable that comes with
>the antenna because they are "tuned".

Hi, Charles. You can leave the antenna wire "as is" without worrying about the effect. The cable which comes with mobile antennas is generally less than 25 feet long. There is no significant loss of power in a cable of this length.

If you were installing a base station and curled 150 feet of coax on the floor behind the desk, that would be another story.

As for the other question: Here's the "straight scoop".

The length of the feedline is not significant except in a few special cases. A typical base or mobile installation is NOT one of the special cases. (If the words "coax balumn" or "phasing" appear in the description, then it IS a special case).

Think about what you saw in the instruction booklet. If the length were critical, the manufacturer would not have told you to keep the coax "as short as possible". Instead, the book would have specified an exact length. As you can see, the book did NOT specify an exact length.

Meanwhile, another responder brought up an excellent point about listening for "alternator whine" with the engine running. If you find this condition, you can solve it as he suggested by running the wires to the battery. Or, you can install a simple filter in the power supply line, right at the radio. Radio Shack has several types of "noise filters" which are inexpensive and which work very well.

Did we mention that you must mount the radio to the dashboard using SOLID GOLD hardware? (Just kidding).

QRM

I was explaining to a real estate prospect that he needed to get pre-qualified by his bank before I showed him a duplex which is listed for sale. "We don't want any tire kickers," I explained.

Then I realized I was at his place of business--a tire shop!

> if you had any real world hf experience youd know for sure without having to
> hear what people say

Has nothing to do with HF Tim. It's a straight forward engineering exercise to digitize the tube curves and do the calculations. I have already done so about a year and a half ago, with the 811, and was in the process of doing the same for the 3-500Z after that. What I was after was a good Spice model to run simulations with. The 811 model was good enough to verify the datasheet values for the 811 running in a grounded grid design. The model also shows the elliptical load line that results from running the tube in a grounded grid amplifier, exactly as shown in various engineering text books covering vacuum tube circuit design. The model also seems to be good enough to show the IMD generation too. However the datasheets don't have any IMD data, so I can't verify the results. The results did fall in to the range from amplifiers that have been tested.

I take it from your quoted comment above that you don't bother to check your work. So as along as it don't go up in smoke you're satisfied everything works just fine. I would advise people take their equipment to somebody else who has more of an interest in being sure there is no problem.

>> OK.....let's look at the facts. Here below is the original posters
ad
>> (a page link). As you can see, he says he used the amp with an RCI
>> 2950. So "pretending" he's a licensed ham using the amp on 6 meters
>> doesn't wash.

>And you know the spectrum of the guys 2950? Is he running a
>transverter? How do you know this.....Crystal ball? Jeanne
Dixon
>your aunt?

You're right. We don't know anything about him for *certain*, except
that he posted a "for sale" ad for an amplifier clearly targeted at
the CB crowd. But if you want to play semantic games where anything
can be anything (i.e. pigs can fly) then the point is indeed moot. The
seller might not even exist. (After all, you cannot prove it).

>> And no, he never states he will sell "only to licensed amateurs".
Like
>> most outlaw CBers, he includes the phrase "legal for amateur use
>> only".

>You make many assumptions and guesses before you summate a conclusion
>which equates to nothing more than a *best guess*. Violation of laws
are
>based on evidence, not guesses.

And since one cannot conclusively prove evidence of ANYTHING
(including innocence) anything further you say here is speculation and
bullshit. Agreed?

>>Many illegal CBers think this makes an illegal act (selling a
>> contraband cb amp) legal. It does not.

>The seller never stated he was or wasnt a ham, so all of your
rhetoric
>is for naught.

The seller also never stated he was a space alien from the Planet
Mongo. Are you telling me we should assume he might be?

>>Please show me where in Part 95 and
>> 97 it says that one must make that disclaimer when selling an
>> amplifier.

>I dont have to. Its up to *you* to legitamely prove the seller isnt a
>ham. Guys like you should spend a night reading the Constitution. It
>might make for some informative reading.

Before I start reading maybe you can give me the benefit of your
experience with the document. Where in the Constitution does it say
that you can't criticize a "amp for sale" ad in a CB newsgroup?

>> I'm just stating the facts. Sorry if you didn't do your research
>> before shooting your mouth off. You must be angry for being exposed
as
>> such an ass.

>Youve presented no facts. First, you guess that the seller isnt a
ham,
>which is nothing more than an assumption.

Assumption based on facts. (a) no call (b) 10 meter amp advertised in
cb newsgroup. (c) Bunch of lame excuses for it posted by guys like you

>Then you try to justify your *best guess* by citing a non-applicable
>administrative statute from Part 97 in a weak attempt to make
> yourself appear knowledgeable of the rules,

The cite was accurate and concerned amps capable of transmitting in
the frequency range in question.

>which, by the debotchery of facts that you presented, you clearly are
>not. Then, to finish off your usual *dog and pony show*, you attempt
to
>divert the burden onto whom you are debating, which works pretty well
in
>the eight grade however some of us have matured past this type of
>behavior.
>All it took was 3 postings for you to demonstrate your total
inability
>to debate and comprehend written facts and administrative law.

Your position is based on your assumption that the seller is a ham
restricting his sales "only to hams".

*You said that his ad included a notice that he would only sell to
other hams. I showed you the ad - which did not include any such
notice.

*I further pointed out that he did not post a call sign or indicate in
any way that he was a ham.

LOL. I would wager a guess that most people see an ad in a CB
NEWSGROUP for an amp (noting "swing" as a selling feature) that covers
the 27 mhz band and know right away who and what it's intended for.
It's for CBers who want to break the law and don't care about the
consequences. You know it. I know it. Everyone knows it. However if
you insist on perpetuating the ridiculous charade that this is "a ham
looking to sell a 27 mhz amplifier to a fellow ham" then I'll

certainly consider any further data you have to offer.

However if you have no other factual data to use in your argument I expect you will probably direct your efforts to a personal attack against me.

>I would
>have thought with your experience at bamboozling people on this NG that
>it would have taken at least 6 or 7 postings for the jig to be up.

Has anyone out there ever put one of these together. If so, I have a couple of questions, please. How broadbanded was yours after you put it together? Is there any way to increase this? Where were your gama rods set for resonance? I just have some general questions for someone who has built one of these. I get a flat match on the horizontal side at channel 20 but it goes to about a 1.7 on channel 1 and about a 2 on channel 40. Is this normal. The vertical is a little worse but I didn't flip it one the side yet. I was told by someone that this antenna should go from 25 to 32 megaherz. I don't know if I believe this but I think it should go 40 up and 40 down below about a 1.7:1.

Thank you!!!

: And you, Bill Nelson <billn@spock.peak.org> replied with ....
: " Correct. "

: Here you seem to agree that ALL power is transmitted by the antenna.
: Are you playing "Devil's Advocate" ?

No, I was just unclear - which often happens when I try to make too short
a response. I was assuming that you meant the "antenna" proper, when you
stated "antenna" - without allowing the outside of the shield of the coax
to also be part of the antenna system.

The interesting thing about common mode currents is that no mismatch is
required for them to occur. They also may, or may not, affect the SWR
reading you obtain.

But if there are currents on the outside of the coax, then the coax is
part of the antenna system.

If the common mode currents due to "leakage" at the coax/antenna joint
are blocked - then all reflected current will travel back inside the
coax. In this case, my short answer is correct.

:> : If you want to know the reflection from the antenna, read it at the base
:> : of the antenna, with a very short lead (or double PL-259) from the
:> : antenna. This removes the worry of cable loss, phase, common mode
:> : currents, velocity factor, coax length, what the *~!# are all those
:> : circles, etc.
:>
:> Wrong. It does not eliminate commonmode currents.

: I have not said that it "eliminates" commonmode currents, just that if the
: antenna SWR is measured at the antenna then the above technicalities are not
: a major concern.

It doesn't matter. Your statement would be true, if the mismatch were between
the coax and the SWR meter - and there were no common mode current. This is

generally not the case.

If there are common mode currents, then the coax is part of the antenna. Vary the length of the coax and you vary the input impedance of the antenna, thus changing the SWR.

Even being in the near field of the antenna will cause a change in the SWR.

To me, the only place where the SWR matters is at the transmitter, where it must be low enough that the transmitter will load properly. If an antenna "tuner" is used, then SWR becomes even less important. Of course, this requires that you have a reasonable length cable run.

As a further caveat, a low SWR does not guarantee that the antenna is radiating with peak efficiency. And maximum radiated power is really all that matters.

Frank Gilliland <sparky@cet.com> wrote:

:>: If you put a matching device on an open coax to make the coax part of
:>: a resonant circuit, then it is no longer working as a transmission
:>: line, but rather as an antenna. That's not the issue.
:>
:>No more so that if there is no matching device. And I said nothing
:>about making the coax resonant. The purpose is simply to allow the
:>transmitter to efficiently transfer power to the coax.

: But not as a transmission line. You are effectively removing the
: transmission line and using the coax as an intentional radiator.

Are we talking about common mode currents here. I forget the original
part of the thread. If there are no common mode currents, then the
coax is not part of the antenna - with or without a matching device.

: <snip>
:>: Now since the tank is a frequency-dependent impedance matching device,
:>: when you change it's load you detune the tank. What happens to plate
:>: current when you detune your tank? It goes up, right? What happens to
:>: plate dissipation when you increase the plate current? It goes up,
:>: right? How much you wanna bet that the additional plate dissipation is
:>: a number that is close to the reflected power?
:>
:>The only way that what you say could be true would be if the power entered
:>the tube and traveled the wrong way through it. How is that going to be
:>accomplished?

: Transmission lines are usually analyzed as a distributed network of
: inductance and capacitance, or little "tanks" for lack of a better
: term. In effect, the transmitter's tank is just an extention of the
: transmission line. Since power is carried in the form of voltage and
: current, it's easy to see how if power can go one way it can also go
: the other way at the same time, and how reflected power -- in the form
: of voltage and current travelling along a distributed network -- can
: end up on the plate or collector of the final. They are just waves.

Except, when looking back into the transmitter from the coax, you do
not see 50 ohms.

... deleted ...

:>In any event, why leave the tank in a detuned condition? Retune it, and
:>the plate dissipation would return to the normal value.

: Then you are detuning the tank away from the characteristic impedance
: of the coax, and you will end up with a conjugate match.

Sure. But the characteristic impedance of the coax does not matter to
the transmitter. What matters is the input impedance to the coax that
the transmitter sees. When there is a mismatch, that is not 50 ohms.

:>: That's just one way reflected power is dissipated in the transmitter.
:>
:>Well, more power is dissipated in the transmitter. Our disagreement is
:>just the source of the power that has to be dissipated. I claim that it
:>is due to the final not operating at the designed efficiency - you claim
:>the reflected power enters the tube and is the cause.

: It's both. The reflected power causes the inefficiency. If there was
: no reflected power, there would be no need to retune.

I can accept that. But just because it is the cause of the inefficiency
does not mean that it gets back into the tube.

:>I doubt if we will ever agree.

: Maybe, maybe not, but at least it's a civil discussion.

Nothing is gained by name calling or other such tactics - except as
momentary entertainment for those easily amused. It tends to cause the
other person to close their mind to further rational discussion. I
would much rather that the other person continue to consider my views,
just as I continue to consider theirs. Hopefully, we can both gain
something useful from the exchange.

Brainbuster <brainbuster@lineone.net> wrote:
:> Bill Nelson wrote:
:> >
:> > If the antenna is designed to be 50 ohms at resonance - and the antenna
:> > is tuned properly. That is asking a lot from both the manufacturer and
:> > the user.

: I must disagree with this. If you part with your hard earned cash for
: anything, you expect it to do the job it was purchased for. I don't know
: about the USA, but in the UK, we have laws that recognise this issue. If you
: buy an antenna for a 50 Ohm 27MHz radio, you expect it to be 50 Ohms, and be
: tuneable at 27 MHz to within negligible or stated tolerances.

It is impossible to design an antenna that will have one impedance over a
quite varied range of conditions - such as ground loss variation or distance
of the ground plane from the ground.

I once had a 1/4 wave whip in my vehicle. I could tune the antenna to get
a 1:1 SWR, like most people want to have. But I never did so, except to
verify it was possible, because the antenna radiated more power when it
was tuned for almost a 2:1 SWR. Since I was using a transmitter with a
tube final, there was no problem with this mismatch - and the signal was
over 3 dBm better than when "matched".

Now this may be atypical - but I have rarely seen an antenna that performs
best when tuned for the best match. Exceptions here are various multi-element
antennas that are mounted multiple wavelengths above ground.

This has got to be one of the all-time Twistedhed Classics, aptly answered by Dwight Stuart. - A
==========

From: Dwight Stewart (stewartx@sccoast.net)
Subject: Re: Respect For Freebanders
Date: 2001-04-30 02:40:03 PST

Twistedhed wrote:
>
> We are good operators and have knowledge
> of propagation and skip conditions.

First of all, to be a good operator, one has to obey the radio rules and regulations. Since "freebanders" don't do that, it is absolutely impossible for them to be "good operators."

> We use Yasus, Kenwoods and Icomm radios
> just like you do, so we know technical
> issues as well or better.

Technical knowledge doesn't come from the radio you own. By the way, the correct spelling is "Yaesu" and "Icom."

> However, the attitude of some hams toward
> us is rude and condescending. We are
> treated like 2nd class citizens.

When you openly violate the law, you deserve nothing more than rudeness from those who understand the value of those laws. And people who violate the law are generally treated as 2nd class citizens, so if you want something more than that, don't violate the laws.

> We have the same rights under the
> constitution as legal hams do.

And you also have the same responsibilities as everyone else has - the responsibility to obey the laws of this land. If you don't like a law, you're free to advocate it's change. However, you're never free to violate it without suffering the consequences. One of those consequences is the very loss of respect you claim is shown to "freebanders."

> For those that do not wish to be under Uncle
> Sam's thumb, freebanding is a viable alternative
> to getting a ham radio license.

In a country of 280 million people, laws are required to maintain order. That is not just the government's position, Twisted. Those people, who realize the alternative would be madness, demand it. And that (maintain order) is exactly why the radio regulations were written. Your alternative, the use of whatever frequency suits your fancy at the moment, is madness. Likewise, your use of the "freeband" frequencies deprives those who have a legitimate need for those frequencies of their use. And that can have serious consequences - for example, one common "freeband" frequency is assigned as a Coast Guard Hurricane operations frequency.

> What I am saying is that maybe the next time
> you meet a freebander it might be wise to
> talk with him before you condemn him.

Yes, it would be good to talk to him - anything to convince him that his behavior is both wrong and potentially harmful. However, many of us have tried that in the past, and are simply tired of trying to convince the village idiot that his behavior is harmful to this community of radio operators.

> I am QRT and standing by. (No flames
> answered. Please reply via email)

Twisted, what kind of scam are you trying to run? You've posted this messages several times before, each time asking Hams to contact you via email. What happens to those poor souls that actually do contact you via email?

: adj..

More to the point is that the manufacturers have never adhered to the proposed standard. This is true for Ham gear, as well as CB. It is not hard to check your own meter - assuming that you can accurately measure the output power of the test transmitter.

Given the desire of many CBers to want "more S-units", the manufacturers have catered to this desire and skewed the scale so it is closer to 3 dB per S-unit.

Hello Aaron: Yes I'll let you into a little tib bit of information here.

I listen to QRP all the time. While doing antenna comparison testing, the 10 meter beacon band is listened to very closely, as different antennas are switched on and off, line to the receiver. This is a fantastic test. The beacons are only low power 1 to 5, maybe 10 watts. Many are only neck and neck with the noise floor, and when a antenna is switched on line and the received signal shoots up a few dB, this is a great field strength indicator to know.

6 Meters is alive and well. My Interceptor Ten Thousand or I-10K, works on 6 metres, after adjusting the antenna lengths shorter, and retuning. The lack of impedance matching loss's are more evident on the 6 meter higher frequencies.
The I-10K/2M-MURS works on the 2 meter band and the Murs frequencies, with a low SWR. And I can receive the local Murs stations about 20 miles away on the I-10K/2M-MURS 5/8 Wavelength Ground Plane Antenna.

Hello Dick:

Yes ok good deal. I have printed out your reply and will go thru the books today, with it.

The end feed, half wavelength antenna, the A99 Fiberglass Antenna is different than the Shakespeare Fiberglass Antennas.

The A99 and the I-Max 2000, are very close in design. The A99 being a halfwave, and the I-Max 2000 being a 5/8 wavelength antenna. They use the same type of impedance matching circuit. I'll send you a jeg photo if you would like.

Does this statement come from someone who has run side-by-side tests? In North Carolina, we have conducted several checks of Amateur equipment which had been moved up to GMRS/FRS frequencies.

I won't bore you with the details. Suffice it to say that the specs don't hold up when you leave the ham band.

Some, like the Alinco brand, loose transmit power when moved out of the designed frequency range. All models tested suffered from poor receive sensitivity and were plagued by intermod.

If you have found something which can hold its own against a transceiver designed for a specfic frequency, congratulations. Most folks are not that fortunate.

> You're right. We don't know anything about him for *certain*, except
> that he posted a "for sale" ad for an amplifier clearly targeted at
> the CB crowd.

You seem to be bent on non-topic items posted to this group which is far from illegal.

>But if you want to play semantic games where anything
> can be anything (i.e. pigs can fly) then the point is indeed moot. The
> seller might not even exist. (After all, you cannot prove it).

Again, I dont have to. If you're going to make yourself look like a buffoon by posting someones presumed guilt, at least have some hard evidence to back up your claim. You have absolutely NONE. Try watching some Matlock re-runs.

> And since one cannot conclusively prove evidence of ANYTHING
> (including innocence) anything further you say here is speculation and
> bullshit. Agreed?

No, facts are facts and guesses and guesses. Have you ever heard the saying; "innocent until PROVEN guilty"? The key word in this statement is "PROVEN". Until the seller of the amp demonstrates via FACTS that he is violating the law, your crusade has no merit. No one with any kind of understanding of the law will ever take you seriously. Have you noticed that none of the HAM contributors to this NG have backed up your threads.....mmmmmm, ever wonder why?

> The seller also never stated he was a space alien from the Planet
> Mongo. Are you telling me we should assume he might be?

Sure Aaron whatever you say. I guess Logic and Debating weren't your strong subjects eh?

> Before I start reading maybe you can give me the benefit of your
> experience with the document. Where in the Constitution does it say
> that you can't criticize a "amp for sale" ad in a CB newsgroup?

I will. Right after you cite the convention that contains an individuals Constitutional right to be a babbling blatherskite.

> The cite was accurate and concerned amps capable of transmitting in
> the frequency range in question.

Well apparently you're the type of guy that reads half a book and jumps to a conclusion because its painfully obvious that you didn't read what I cited. If you ACTUALLY read what I cited, you'd have noticed that Section §2.815 of the FCC Rules are subordinated to Section §97.315. Stop blowing smoke.

> *You said that his ad included a notice that he would only sell to
> other hams. I showed you the ad - which did not include any such
> notice.

>
> *I further pointed out that he did not post a call sign or indicate in
> any way that he was a ham.

Backpedaling huh?.....Come-on Aaron is this the best you've got or should I go get my neighbors 14 year old daughter to finish this debate for me?

Guys like you make alittle substance and alot of noise. Besmirching, Bullying, Demeaning, Embarrassing, or trying to Scare people in an attempt to get them to do what you what them to do is not the way the system works.....at least for those of us who clearly aren't intimidated by the likes of you..... Once again, GET REAL. Put your money where you mouth is and start buying these amps to validate your assumption with facts. Hell, Im sure Riley Hollingworth will pay you back.

The bottom line is that your behavior is actually an embarrassment to the Ham community.

Ill let you rant from here on in so feel free.

Thanks for the reply Jeff.Why do you say you don't think it will not survive in a mobile environment?Does it have a flimsy case? By detachable face I meant you don't have to run the coax to the meter case,which is a plus in my case.

Jeff Mayner wrote;
I've never taken mine mobile. Tell the truth, it doesn't look to me like it would stand life inside a vehicle. Just my opinion. I have had a year of trouble free operation. I have not noticed any problems. I have not had it checked as to accuracy though it seems to be able to pick out slight variations between radios. When switched between radios, it measures each radio the exact same, each and every time. Measures average and peak. Lighted face (110v). Nice meter! What, exactly, do you mean by "Detachable Face"?

Ham RADIOS below 30Mhz DO NOT have to be "Type Approved" in the sense that
CB sets do. They do have to meet the standard part 15 self compliance ect...
If they scan/rcv above 30Mhz they have to be Accepted for the "cellular block"
ect....
That is why there is NO "FCC ID" # on a Radio Shack HTX-10M or A ranger
2950, unlike a Cobra 148 or a Uniden PC78.

Actually, slight technicality aside, the poster is correct in that amateur radio equipment need not be type accepted.

Commercially made amateur radio equipment must be type accepted.

However, as an licensed amateur, we are free to build and operate our own, non-type accepted equipment. The only requirement, is that the equipment we purchase and/or build, is operated within the confines of the rules and technical requirements.

The exception to building equipment is if we, as an amateur radio operator, start to mass produce and sell radios for the use in the hobby, we then become a manufacturer, and therefore must have type acceptance for that "product".

Now, to be honest, I do not know at what point/quantity is considered to be "manufacturing", but I suspect that if somebody built more than a handful of radios, specifically to market and sell, the FCC would probably take interest. Offering kits, as is commonly done, is not a violation of this rule, as you are not manufacturing the device.

The bottom line is, we, Amateur Radio Operators, are not required to use Type Accepted Equipment.

Only commercially made external power amplifiers must be type
accepted. Complete transmitters and transceivers *do not* require type
acceptance.

Other than normal compliance with Part 15 standards, the only category requiring certification is external amplification as noted in 97.315 and 97.317. Check the law and then argue otherwise.

Would you please. I have done a bit of research on the 99 and I think I see how it is done. End-feds in my experience have been a little pissy about the weather.

A radialless 5/8 scares the living shit out of me.

You will see some stickers that refer to Part 15 (the receiver is not a transmitter) which tend to cause some confusion and often ham gear is a mod or sub-set of something that is certificated and gets the stickers in the course of events but ham gear is not subject to rules designed for services in which the user is a user and not a control op. Bert is correct. Amplifier rules are a bit arcane but do not involve certification by the manufacturer.

Admirable! Bet you now are known for sappy audio on the ham bands; you can't win! With most of the world stumbling to the 12.5 kHz standard, 2.5-3 deviation (dare I call it swing) will ultimately rule on the ham bands but don't hold your breath.

Along those lines the calibration, db's per "S" unit, may not even remain constant through out the whole range of the meter either.

>: of voltage and current travelling along a distributed network -- can
>: end up on the plate or collector of the final. They are just waves.
>
>Except, when looking back into the transmitter from the coax, you do
>not see 50 ohms.

My point was that the output tank of the transmitter can be considered
to be part of the transmission line because RF power can be shoved
through it in either direction.

>... deleted ...
>
>:>In any event, why leave the tank in a detuned condition? Retune it, and

>
>I can accept that. But just because it is the cause of the inefficiency
>does not mean that it gets back into the tube.

Well,... yeah, it kinda does. When something is wrong at the antenna
and it affects the tube, then I would have to say it gets all the way
back to the tube. The error at the tube is proportional to the error
at the antenna.

>Vary the length of the coax and you vary the input impedance of the antenna,
>thus changing the SWR.

Some in the radio community have misunderstood common-mode currents (CMCs) and made it the scapegoat in many SWR witchhunts. So at this point I would like to reiterate that CMCs are -not- currents that flow on the outside of the shield, but they can be one -cause- of RF appearing on the wrong side of the shield. CMCs have a specific meaning in RF engineering, and I have included the relevant part of the definition in my page.

RF can 'leak' onto the coax from the antenna in a base setup, but that rarely happens in a mobile. The roof of a vehicle may or may not be a good counterpoise/ground plane, but it -does- make an excellent RF shield. Since RF only conducts on the outside of a conductor, and since most car bodies are ferrous, it is almost impossible for RF to slither down through the crack between the antenna mount and roof, through a half-inch hole (also remembering wavelength), back out through another crack, and end up on the coax shield. That RF is coming from somewhere else.

The two most likely culprits are standing waves and poor grounding at the transmitter. Standing waves will directly induce RF onto the shield via coax containment failure, as I have pointed out in my page. And when the transmitter is not properly grounded (an RF ground) to the vehicle, the radio will 'float', and that will -most definately- cause CMCs. This is common where handhelds are used with a roof-mount antenna. But here again, just because RF currents are on the shield doesn't necessarily mean they are caused by CMCs. The difference is phase.

Since there is no easy way to detect CMCs, or even to identify them apart from any other type of shield current, the term 'common-mode current' shouldn't even be a part of the CBers vocabulary. In other

words, forget about CFCs because there are bigger fish to fry.

>Even being in the near field of the antenna will cause a change in the SWR.

>all that matters.

Agreed, and a field-strength meter is a much better investment than a
SWR meter. It's cheaper, too.

Nope. Just pointing out the truth.

There is no legal loophole that enables you to sell (for example)
Davemade CB amps by saying the magic words "This is a ham amp and I am
a ham selling only to hams". This is just another CB myth...like the
one about "the magic coax length".

Source record: 90195

Hello Moskals:

Not a real friendly response you got on rec.amateur.radio.antenna
newsgroup.
Amateur radio suffers from unfriendly people at times, a real pity.

I am sure the guys at MaCo could tell you what that antennas bandwidth
should be. Be advised that the length of the coax will slightly effect
the bandwidth. The longer the coax the slightly wider bandwidth will be
measured. This is due to the added resistance in the transmission line,
but is insignificant in most antenna installations.

In your case, it sounds to me like you need to check all the antenna
length dimensions, per the assembly instructions. It is possible to have
the antenna elements not properly installed, and the Gamma match makes
up for some matching beyond what it was designed for. At least worth a
try to go and double check the antennas dimensions, ah? Also look at the
elemet spacing lengths.

What else can you say or describe about your antenna installation, is it
near other objects, are all the clamps tight (I have seen a lot of guys
toss the factory MaCo clamps, and replace them with good marine quality
stainless steel hose clamps) how high is the antenna off the ground,
anything else?

The antenna will not work from 25 to 32 MHz, with a decent SWR. What
they mean is that the antenna can be adjusted to work in the range from
25 to 32 MHz.

If you are having problems with the guys at MaCo, I'll call them for
you.

No doubt. Tim has tried to pass himself off to me as some kind of CB tech guru during several E-mail exchanges a long while ago. It is becoming increasingly obvious he knows just enough to get himself in to hot water, and fakes the rest. I'll bet you money Tim didn't understand more that 10 percent of my post regarding harmonic suppression or IMD issues. It seems to fit his character. If the FCC isn't knocking down his door he doesn't care what kind of problems he is causing somebody else.

I've run in to this type too many times before on the job, where they get in to equipment, and start messing around with control settings etc. One or two I met thought they knew more about the equipment than the people who designed it! Then when it was messed up beyond their ability to fix it I get a phone call. I then spend the rest of my day trying to figure out what they screwed up, and trying to talk them through the procedure to return the equipment to proper operation. When that doesn't work because the guy I was talking to doesn't understand diddle, I either will have to fly out to the site to fix the problem personally, or get a Field Engineer to go. When it's at the point where you have to teach the so-called " tech guru" on the phone how to use his meter and a scope, you know you're wasting your time with them.

QRM has a hidden agenda here...

Go to alt.radio.family, mention using a Ham HT on FRS and the FRS cops will come swooping down on you - QRM is one of them...

I have done side by side tests with an Alinco DJ-V5 and DJ-S41 - the DJ-V5 easily out performs the Motorola 6300 series, Motorola T289s, Cherokee FR-465's, Drake 99's... The DJ-S41 is head-to-head with them since its max output is 300mW (there is a slight advantage with the DJ-S41 since it is set for slightly higher FM deviation and it sounds louder on a normal FRS radio).

I have tested the TX output and the RX sensitivity of the DJ-V5 - it does not drop off like QRM would have you believe... Over in the alt.radio.family group QRM will be glad to tell you that you are evil and immoral for using Ham HTs on the FRS band.

I forwarded that to my buddies that are big RCI fans.
How come Ranger doesn't make an optional tone board? If I was in charge of such things I would have them factory install the things like the big boys do.

Interesting post, Leland. I'll add this to my archives on tube amp
subjects.

I would like to add that one shouldn't attempt to replace a 572B with an
811A.
Also, why would someone replace a $20 811A (in an amp designed to use that
tube) with a $45 572B?

Hello all, Im selling a Brand New modulator (1 tuber/8417 GOLD TUBE) this thing is insane......it will take an input carrier of anything from 1/2 a watt up to 10 watts, and swing the living heck out of it...up to 130watts PEP, its just freikin amazing the amount of audio it makes.......its actually louder then ANY JB 150/ JB200 ive EVER HEARD!!!!!!!!! I dont care what kind of radio you hook it up to. I cannot send pics, I have no P.C. based camera to send them but I swear......this thing is NEW fully vented on 3 sides of cover, its custom built by a fellow named Gregg Barket in Trinity Alabama, EVERYTHING IS CUSTOM MADE, and to top it off you can also cut down or increase the carrier level from the modulator itself, its capable of AM/USB/LSB modes, it has a beautiful red lamp to show intensity of modulation, but if you own a PEP reading watt meter, you'll be amazed at how this thing STOMPS ON EVERYTHING OUT THERE!!!!!!!!!! I paid $225.00 for her, and Id be willing to part with it for $125.00 plus you pay shipping costs. This is an absolute STEAL/BARGAIN of a deal, I cannot run this any longer because Im using an indoor dipole antenna (I live in a Condo Unit) and the antenna/radios/and all extras, interfere with T.V's/Phones. otherwise Id NEVER EVER get rid of it. any serious buyers can only reach me at my e-mail address/JJ475171@aol.com, and thanks for reading my posting, Regards, Frank.....73'

Got the pictures. The A99 apparently purports to be a half over a quarter co-linear with the phase delay done in the 'variable mutual transconductance' circuitry. Hokay. And all in 18 feet no less.

In case you have never heard the term, co-linear means arranged along the same line; it is not an amp. Flat radiation pattern but usually used with radials.

Gonna take some study; at the moment, damfino

And you know the spectrum of the guys 2950? Is he running a transverter? How do you know this.....Crystal ball? Jeanne Dixon your aunt?

> And no, he never states he will sell "only to licensed amateurs". Like
> most outlaw CBers, he includes the phrase "legal for amateur use
> only".

You make many assumptions and guesses before you summate a conclusion which equates to nothing more than a *best guess*. Violation of laws are based on evidence, not guesses.

>Many illegal CBers think this makes an illegal act (selling a
> contraband cb amp) legal. It does not.

The seller never stated he was or wasnt a ham, so all of your rhetoric is for naught.

>Please show me where in Part 95 and
> 97 it says that one must make that disclaimer when selling an
> amplifier.

I dont have to. Its up to *you* to legitamely prove the seller isnt a ham. Guys like you should spend a night reading the Constitution. It might make for some informative reading.

> I'm just stating the facts. Sorry if you didn't do your research
> before shooting your mouth off. You must be angry for being exposed as
> such an ass.

Youve presented no facts. First, you guess that the seller isnt a ham, which is nothing more than an assumption. Then you try to justify your *best guess* by citing a non-applicable administrative statute from Part 97 in a weak attempt to make yourself appear knowledgeable of the rules, which, by the debotchery of facts that you presented, you clearly are not. Then, to finish off your usual *dog and pony show*, you attempt to divert the burden onto whom you are debating, which works pretty well in the eight grade however some of us have matured past this type of behavior.

All it took was 3 postings for you to demonstrate your total inability to debate and comprehend written facts and administrative law. I would have thought with your experience at bamboozling people on this NG that it would have taken at least 6 or 7 postings for the jig to be up. You're not even a challenge.

>
> >Below are the real Part 97 Rules which Ill post for your

> dealer
> >from an amateur operator and the amplifier is further sold to another
> >amateur operator for use at that operator's station.
>
> So sorry. You've struck out on ALL COUNTS.

How so? Man you love to make wild guesses. You have absolutely no idea of what is applicable, especially Sections (4) and (5) above which can very easly apply.

> *The person selling the amp does not state he is an amateur, gives no
> call letters, and further admits that he used the amp with an RCI
> 2950, and boasts about its "swing".

He doesnt have to identify his call in his ad. Part 97 clearly states that it is the burden of the purchasor to investigate whether the selling source is reputable and legitimate. If not, then a violation has occured.

> *The person selling the amp does not state he will limit sales to
> licensed hams.

You dont get it do you?......He doesnt have to prove *anything* to you, he has to prove it to the purchaser.
Why dont you start buying these amps from these people and prove what you are saying is correct instead of guessing?

>*The person selling the amp did not construct the amp himself or from
> a kit.

And how do you know he didnt by the amp from a licensed dealer (Section 5) or from another amateur (Section 4)? The bottom line is that you can't. You can play this smoke and mirror game with everyone on this group however you should understand that your actions clearly

demonstrate your abilty and experience with Part 97 Rule and Regs, which is weak at best.

My suggestion to you is to get real.....

> Over in the
>alt.radio.family group QRM will be glad to tell you that you are evil and
>immoral for using Ham HTs on the FRS band.

I don't pass judgement on people's morals, Phil. The practice is illegal, without question. But equally important, it is stupid.

If you're a ham, why risk your ticket by running the gear out of band--CB, FRS, GMRS, MURS?

If you're not a ham, why spend several hundred dollars on a radio which you can duplicate for much less?

>QRM has a hidden agenda here...

Wrong. It's Phil C who has the agenda. REVENGE. He dropped into alt.radio.family last year, encouraging folks to adopt an "anything goes" attitude toward the law, especially with FRS. The entire group jumped on him about spreading mis-information and advocating illegal operation on FRS. Eventually, he left with his tail tucked. And that was sad, because he occasionally contributed something of value, and we all enjoyed hearing about his adventures in the photography business.

>the DJ-V5
>easily out performs the Motorola 6300 series, Motorola T289s, Cherokee
>FR-465's, Drake 99's...

Icom and Alinco each include disclaimers with their equipment concerning specs not being guaranteed outside the Amateur bands. If you've found an individual unit which does not operate at reduced power and/or receiver sensitivity, you are fortunate. Even the rubber duck antennas are operating off frequency.

While Amateur HT's may "hold their own" on transmit due to having 1.5 watts instead of the FRS .5 watt, it sure is an expensive way to travel.

Do I have an agenda, Phil? Yeah. Two, actually.

Keep the airwaves available for everyone to use, instead of having a few idiots ruin things for everyone through high power, wide signals, and illegal operating.

And don't spread mis-information over the Internet in NG's frequented by newcomers to the radio hobby.

73,
QRM

fine, ok then what are the rules about selling stuff that you build.
say you build yourself a 3000 a7 amplifier and you decide to sell it.
is it legal for you to sell it to anyone you choose or do the rules
stipulate that you must sell it to only licensed amateurs?

I believe for amplifiers the FCC rules stipulate that a licenced
amateur can build ONE device per year for personal use. You ARE
allowed to sell it to someone else. There is no restriction on who you
sell to. THEY are responsible for operating it in a legal manner.

I do not know how radios are handled.

I was arrested for hitchhiking in 1985, but the charge was dismissed.
Does that count?

Assuming you have followed the instructions for tuning, my guess would be that your coax has an open, or that your antenna is very close to a large metal object (within ten feet). But if the coax came from rs, that's the best bet.

I found a very decent mini a couple months ago, the Colt 357A. Good
sensitivity and adjacent channel rejection. I have never seen one of
these before, and I haven't seen another one since.

Frank Gilliland <sparky@cet.com> wrote:

: RF can 'leak' onto the coax from the antenna in a base setup, but that
: rarely happens in a mobile. The roof of a vehicle may or may not be a
: good counterpoise/ground plane, but it -does- make an excellent RF
: shield. Since RF only conducts on the outside of a conductor, and
: since most car bodies are ferrous, it is almost impossible for RF to
: slither down through the crack between the antenna mount and roof,
: through a half-inch hole (also remembering wavelength), back out
: through another crack, and end up on the coax shield. That RF is
: coming from somewhere else.

It can happen on mobiles as well. It is most common for magnetic mounts.

: The two most likely culprits are standing waves and poor grounding at
: the transmitter. Standing waves will directly induce RF onto the
: shield via coax containment failure, as I have pointed out in my page.

Why would "containment failure" occur with standing waves, but not the
normal rf that travels through the coax?

:>Even being in the near field of the antenna will cause a change in the SWR.
:>
:>To me, the only place where the SWR matters is at the transmitter, where it
:>must be low enough that the transmitter will load properly. If an antenna
:>"tuner" is used, then SWR becomes even less important. Of course, this
:>requires that you have a reasonable length cable run.
:>
:>As a further caveat, a low SWR does not guarantee that the antenna is
:>radiating with peak efficiency. And maximum radiated power is really
:>all that matters.

: Agreed, and a field-strength meter is a much better investment than a
: SWR meter. It's cheaper, too.

:>Are we talking about common mode currents here. I forget the original
:>part of the thread. If there are no common mode currents, then the
:>coax is not part of the antenna - with or without a matching device.

: You agreed with Tad's post saying that all RF power, even reflected
: power, eventually works it's way out the antenna.

I also followed up to your questioning this - and clarified what I meant.

:>: Transmission lines are usually analyzed as a distributed network of
:>: inductance and capacitance, or little "tanks" for lack of a better
:>: term. In effect, the transmitter's tank is just an extention of the
:>: transmission line. Since power is carried in the form of voltage and
:>: current, it's easy to see how if power can go one way it can also go
:>: the other way at the same time, and how reflected power -- in the form
:>: of voltage and current travelling along a distributed network -- can
:>: end up on the plate or collector of the final. They are just waves.
:>
:>Except, when looking back into the transmitter from the coax, you do
:>not see 50 ohms.

: My point was that the output tank of the transmitter can be considered
: to be part of the transmission line because RF power can be shoved
: through it in either direction.

Possibly, but with difficulty. Just like when an antenna "tuner" is
properly adjusted. RF does not get shoved back through it toward the
transmitter. It is either reflected back toward the antenna or is
absorbed by the tuner itself.

:>:>: That's just one way reflected power is dissipated in the transmitter.
:>:>
:>:>Well, more power is dissipated in the transmitter. Our disagreement is
:>:>just the source of the power that has to be dissipated. I claim that it
:>:>is due to the final not operating at the designed efficiency - you claim
:>:>the reflected power enters the tube and is the cause.
:>
:>: It's both. The reflected power causes the inefficiency. If there was
:>: no reflected power, there would be no need to retune.
:>
:>I can accept that. But just because it is the cause of the inefficiency
:>does not mean that it gets back into the tube.

: Well,... yeah, it kinda does. When something is wrong at the antenna
: and it affects the tube, then I would have to say it gets all the way
: back to the tube. The error at the tube is proportional to the error
: at the antenna.

Which has been my only disagreement all along.

Your argument is like stating that when the temperature at the output side of a heat exchanger rises, that heat gets all the way back into the boiler. The only way this could happen would be if the temperature of the output radiator of the heat exchange became higher than the temperature of the boiler (and thus the temperature of the fluid that is conducting the heat to the output radiator).

In reality, what happens is that the boiler cannot transfer heat to the exchange fluid as efficiently. The result is that it cycles on and off more frequently. If it didn't, it would overheat, due to the inefficiency of the heat transfer.

My home is nearly paid for, my income is such that I could afford to be a Republican if I so chose, you can buy a copy of my dissertation from contentville.com, I currently serve on city boards and commissions as I have for the past 12 years or so, I know most of the cops in the city at a professional level, and everyone on the city council knows me on a first name basis. I have never been arrested for anything, nor do I think I have ever been in a position to deserve such, and the last time I got a traffic ticket was about 10 years ago. I've been involved in things electronic since 1963, have enjoyed all aspects of radio, still recall my original CB callsign, now long dead, and earned my amateur extra many years before anyone thought about dumbing down the code test requirements. None of the amplifier junkies think much of me, but then I don't think much of them either.

Lets see........

Collage graduated .... Nope

Gainfully employed .... sometimes.

weigh less than 250 .....Nope

DUI Arrests.... yes, but never any convications.

Possession of Illegal Drugs....Nope

Nuisance ordinances.....the neighbore down the hill complaned about all
the antennas, and shootin, but it got thrown out since they found em
growing there own, not a smart move on their part. The guy had long hair
and was named Aaron.

But iffins ya slide on over to the Peach Farm here in the Great Mojave
Desert, I'll buy ya a cold beer, get ya out of the 110 degree sun and
into the shade. We got both kinds of music I pipe in to all over the
place here. And if ya get your beak too deep into the goon juice, ya can
stay over a while. I'll BBQ ya up a bunch of our famous chicken, got
home made wine and beer.

We got ah shootin range just in back the trailor here. But iffins ya
want we can take the 64 Buick up to Gobblers Knob, shoot rabits and have
a few.
And shoot a lot skip off Gobblers Knob, got a nive view there also.

Jay in the Mojave

I think they have changed it now to be "certified in the FCC database". I don't think they use "type acceptance" anymore. I know they don't for rf amps. But yes, all new radios or amps that exceed the "one per year" rule, and are sold to the public in the US must be certified. You will notice this in ad's where the radio is shown but they say sales pending due to fcc certification or whatever. But once a ham owns a radio, he can do whatever he wants with it. Also a ham can make anything he/she wants, but if they sell more than one a year to other hams, they have to go though the certification. I'm fairly sure anyway...Don't take this as gospel...:/ MK

As usual, it is QRM who is spreading misinformation. I answered a question about using Ham HTs on the alt.radio.family newsgroup and a FEW (four) radio cops jumped in and proclaimed it to be "immoral". In their opinion, using a Ham HT on the FRS band puts you right up there with rapists, child molesters and other criminals. I did not spread misinformation - I just said that it was possible to use Ham HTs on FRS and explained my results.

As far as leaving the frs group with my tail tucked - that is funny, but typical of the kind of misinformation that QRM spews forth. I exposed QRM and his radio-cop friends (four individuals) on alt.radio.family for the hypocrites that they are. They spew crap about their group's charter and then refuse to follow the charter themselves! One member of alt.family.radio went as far as hacking my web site to try to get me to leave. That little trick backfired on him ,though. Instead of logical arguments they resorted to personal attacks which only made them look bad in the end. I eventually got tired of the frs radio-cops on alt.radio.family and visited the group less often.

The alt.radio.family group is typical of any newsgroup - there are a minority of loud mouthed individuals that do the majority of the posting and make the newsgroup unpleasant for everyone. They can't wait to jump on anyone and everyone who posts a message that they can find some way to disagree with. QRM is one of those kind on alt.radio.family. Anyone can do a deja search and read those threads that QRM refers to and see for themselves... or better yet go to alt.radio.family and ask a question about an external FRS antenna, HAM HTs on FRS, FRS simplex repeaters, etc... and see how you are treated.

Phil C

One thing we might add to this - even if you run 40 watts on an FRS frequency, these frequencies are essentially line of sight. So even running 40 watts or so, it is doubtful one could maintain reliable communications with another car 20 miles away (unless one of the cars was parked on a VERY high hill and the other didn't go into a valley!). Commercial UHF users (and amateurs) use repeaters to circumvent these limitations. Through a repeater, one can reliably maintain communications out 30, 40, 50 miles (sometimes more) to a repeater - and communicate with anyone else within the repeaters range. Earlier today, during a break at work, I heard KB2SOZ (Charlie) on the repeater and had a chat with him. He was on an HT also. Between us, we had a total of 12 double a batteries (his 6 NiCads, mine 6 alkalines). We were located about 30 miles apart. One thing to bear in mind - commercial repeaters are monitored nearly constantly by their owners (and users) and they do chase people off them (assuming the intruder knew the sub-audible tones to transmit in the first place). Same goes for the amateur repeaters. BTW, my handheld is heard (through the repeater in Rochester, NY - located near Lake Ontario) in Wellsville, NY - a location 9 miles North of the Pennsylvania boarder (around 110 miles away by car - probably 80 or so as the crow flies). Yes, I can talk to Canada on less than 1 watt.

You bet. Radio pirates, freebanders, renegade hams, and illegal CBers
who expect a warm reception for their philosophy in newsgroups (other
than rec.radio.cb) typically are in for a shocking surprise. Normal,
law-abiding citizens don't sympathize with abusers of the rf spectrum.

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or lease), or
import, ship, or distribute for the purpose of selling or leasing or offering
for sale or lease, any external radio frequency amplifier or amplifier kit
capable of operation on any frequency or frequencies between 24 and 35 MHz.

>I answered a question
>about using Ham HTs on the alt.radio.family newsgroup and a FEW (four) radio
>cops jumped in and proclaimed it to be "immoral". In their opinion, using a
>Ham HT on the FRS band puts you right up there with rapists, child molesters
>and other criminals.

Phil, you did far more than answer a question about Ham HT's. You ranted for two weeks about your rights, and about where to locate mod information about every Amateur transceiver capable of being moved to FRS.

Meanwhile, there was no mention of, or comparison to, "rapists, child molesters, and other criminals". To the contrary, folks asked you to stop promoting Amateur radios for FRS use. Participants encouraged you to get back on topic with discussions about legal radios. And many expressed an interest in your photography business and the worldwide travel it entails.

When you're on topic, Phil, you're an interesting person to correspond with. But you are very unattractive when you play the role of "sniper", hiding in the bushes, waiting to take a pot shot without warning.

It's all so unnecessary, OM. You have achieved a lot in life--as evidenced by the car you drive, the awards you've racked up, and (last, but not least) the attractive models you get the honor of photographing.

Can a Ham radio be moved to FRS? Sure.

Is it legal? No.

Is it practical? Not really, unless you already own one.

Is encouraging folks to do this, the kind of thing you should build your life around? Not in my opinion, but you get to make that choice for yourself.

The FRS newsgroup and this NG conduct business differently. I wrote parts of the FAQ for both, and this was taken into account when each FAQ was created.

We are getting off topic for rec.radio.cb. It is apparent that after many months, you and I continue to disagree about Amateur gear on FRS. I take abuse of the airwaves seriously because history shows that without rules, the system breaks down and becomes useless. I take mis-information seriously because I was new at this hobby once and folks took me under their wing and taught me how to do things the right way. I've always appreciated that.

Yes, I am heavily involved in FRS--from last year's article about me in the NY Times, to the mention of me and FRS radios in a recent issue of US News & World Report, to the comments I make in the August issue of Popular Communications. FRS is filling a much-needed gap in family communications. It does not need "alligator" (high-powered) stations operated by Hams. Nor does it need

"newsgroup cheerleading" which encourages illegal operation.

If you are convinced that you are taking the "high road", and that your comments will have a positive impact on the situation, then continue. I'm tough and can handle the name calling. Just remember the old saying, "When you're slinging mud, you're losing ground."

73,
QRM

>say you build yourself a 3000 a7 amplifier and you decide to sell it.
>is it legal for you to sell it to anyone you choose or do the rules
>stipulate that you must sell it to only licensed amateurs?

As long as you're not a commercial manufacturer, (...by the FCC's interpretation, i.e. common sense thrown to the wind.) you may sell that amp to anybody your heart desires. The onus is on the buyer/owner NOT to use said amp in such a way that violates FCC rules/regs.

> > Ham radio equipment SURELY DOES have to be type-accepted !!!

Where in Part 97 does it say that anything other than an external power amp operating below 144 Mhz needs to be certified or type accepted? Please give us the reference. The ARRL's FCC Rule Book specifically states on page 4-39 that external RF power amps are the only amateur equipment requiring type acceptance.

All VHF and above receivers require compliance with part 15 rules so your HT probably does have a certification.

Paul, it is sufficient to say (when asked about using Ham HTs on FRS) that it is possible but it is also in violation of the FCC rules governing the Family Radio Service. And saying that it is impractical if you don't already own a Ham HT is reasonable too. But saying that the performance of a Ham HT on the FRS band is inferior to the FRS radios or that it will cause all kinds of interference is spreading misinformation...

Here is the beginning of the whole "Ham radios converted to FRS" thread on alt.radio.family:

http://groups.google.com/groups?hl=en&safe=off&th=801aa3db9180f6ca,116&start=0

QRM wrote:

Please show me where I posted any information about "where to locate mod information for every Amateur transceiver capable of being moved to FRS". I posted information on how to convert 1 HT, the Alinco DJ-S41 340mW!!! radio to demonstrate how easy it was since Randy Hefner was spreading misinformation about how hard it is to do. You are exaggerating badly here, Paul...

> Meanwhile, there was no mention of, or comparison to, "rapists, child

with all due respect JJ just what is this piece of shit designed to do? It seems it is an interesting example of non-linearity for those who think audio is the difference between no speak and full-bore output on the theory that this is real Amplitude Modulation. I am sure the first guy to steal a carbon mike out of a payphone and wire it into the keyjack of his MOPA sometime about 1916 thought so too. Fakes the living shit out of a receiver's AGC line but beyond that it doesn't do a hell of a lot for the price of beans in Borneo. If it manages 130 PEP that is a thunderous 35 watts which just might double your range if you don't mind your contacts being short as you irritate the daylites out of anyone you talk to.

Clue me, man

> 811A.
> Also, why would someone replace a $20 811A (in an amp designed to use that
> tube) with a $45 572B?

The 572B can produce double the amount of RF power that the 811 can. However, as you pointed out why do it, well there is no point because the DC power supply in the amplifier was originally designed to supply only enough power for the original 811 tube(s), not the additional power produced by the 572B. To get more output power, using the 572B's, the output network needs to be redesigned too. So if you can't get more out of a 811 tubed amplifier, using the 572B, there is no point in putting tubes, 572B's, that cost double the money for the same power output.

> This is partially accurate and partially bullshit on stilts.

-snip-

I sure hate that you see it as BS OM. It certainly was not meant to be BS as you put it...just an opinion...just like your statements. So I guess I have to launch an arrow back you, isn't that how the game is played? Tell me, are you really going to cut through QRM on 27 mhz with a pair of 6L6's? I don't think so. 6146's...yea maybe. A 4-400? Yup, most likely. As for the transformers, sure you can use the same power supply for both the AF and RF sections. The point was it is darn expensive to do as well as rather dangerous for a average Joe to get into. Since you were in such a jovial mood as to pick at my posting and call it BS (kinda thought that meant lying), why in the heck didn't you mention that if you use a triode(s) you don't need neutralization? I kind of wanted to keep the answer understandable and not a high tech lecture that someone who would be interested might blow off. That's the problem with posting to a newsgroup...there is ALWAYS someone waiting to shoot their silver bullet. Human nuture I guess. JP

> anybody your heart desires.

Ah, no. See section 97.315 (b4), and section 97.315 (b5).

Section 97.315 (b4)
===============
The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

Section 97.315 (b5)
===============
The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

If you will notice Bert the FCC is VERY specific about whom an amplifier is sold too, either an equipment dealer or another amateur.

> Also, why would someone replace a $20 811A (in an amp designed to use that
> tube) with a $45 572B?

The 572B can produce double the amount of RF power that the 811 can.
However, as you pointed out why do it, well there is no point because the DC
power supply in the amplifier was originally designed to supply only enough
power for the original 811 tube(s), not the additional power produced by the
572B. To get more output power, using the 572B's, the output network needs
to be redesigned too. So if you can't get more out of a 811 tubed amplifier,
using the 572B, there is no point in putting tubes, 572B's, that cost double
the money for the same power output.

--

KC8LDO

I think it is more likely that he is cooking 811s on Ancient Modulation.
The 160 watts per tube plate dissipation vs the 65 of the 811 is the
appealing part to one not willing to leave well enough alone. Most of the
811 amps can be loaded to more than they will stand with Antique Mary.
Getting the heat out of the cabinet is the next question.

I think if you look closely at the ads, with the disclaimer about waiting for FCC approval, you will notice that the equipment is either a receiver or a transceiver. In that case the FCC has to check for conformance with the restriction on cell phone monitoring etc. An amateur receiver can be manufactured under Part 15, which can require the type acceptance. In fact I remember seeing a Part 15 sticker on my Icom IC-706MKIIG when I first opened up the box. Hummmm.....

You are welcome.

Why do you say you don't think it will not
> survive in a mobile environment?

I did not mean to give the impression that it wont. I just mean I don't know. It may very well be true that it works fine. IMO, and that's all it is, my opinion, looking at the case it just doesn't look sturdy enough. I will not have a problem with it if I'm wrong. :-)

Does it have a flimsy case?

Not particularly. I just would not choose to subject it to the rigors of mobile operation. Perhaps if it weren't as expensive as it is. That being said, I did use a Diamond SX-100 for about three years and it held up pretty well. The Autek is probably at least as sturdy as the Diamond.

By

The remote-like nature of the coax connection is a major plus. I agree 100%.

If that's the case then I'll bet the anode supply voltage sags a lot, which would require running more anode current to get the power. Most of the amateur amplifiers I have seen don't have enough filter capacitor to keep the anode voltage from sagging way too much under a high duty cycle load like AM or RTTY. In other words the voltage regulation of the anode supply sucks. Seems like most of them are designed mainly with either CW or SSB operation in mind where the anode voltage filter time constant is low, short interval high peak power to low average power. The guys that run the amplifiers than can produce 2.5KW to 3KW run them at the legal limit to take advantage of the improved anode voltage regulation, i.e the loading on the amplifier is less thus less anode voltage sag, so they can use them in a high duty cycle application like AM or RTTY, and still get the power.

> Getting the heat out of the cabinet is the next question.

Humm.... 3 X 160 watts, or 4 X 160 watts makes a nice room heater in the winter time.

Message-ID: <9k0jkcuoe2@sevenofnine.peak.org>
Source record: 90202

: However all the books say that for maximum AM efficiency, we want to
: modulate the finals, not amplify an already extant carrier. So, why
: aren't we seeing tuned final amps that have plate modulation? Use the
: commercial xcvr as a rx/exciter and run it into the amp, possibly
: running a predriver, and modulate it.

The reason for the higher efficiency is that plate modulation of the final stage allows the amplifier to run Class C - and still be linear.

The reason it is not used, except in commercial stations, is that the modulation circuitry is very expensive. For a 1000 watt amplifier, you need a 100 watt audio modulator - plus circuitry that can handle this much AM power while blocking RF from getting into the modulator.

6117. Re: D&A Phantom 500

Newsgroup: rec.radio.cb
Date: 2001-07-29 09:41:23 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3B63DA43.8E855CB0@qnet.com>
Source record: 90210

Hello UK.N: Great question.

I have a few old Maverick 250's as well. I have looked at the 6146B or 6146W tubes as to modify the Maverick 250's. But the Suppresor grids are internally connected to the Cathode, not allowing grounded grid operation, as the original tubes 6LQ6 or 6JE6C.

The Svetana tube EL509/6KG6 made in Russia, has been used to replace the 6LQ6 tube, but be advised circuit modifications are required.

Here are a few reference web sites ta get ya goin:

http://www.svetlana.com/docs/tubeframe.html
http://www.svetlana.com/docs/TechBulletins/technoteNo49.html
http://www.svetlana.com/docs/TechBulletins/technoteNO.32.html
http://www.rfparts.com

If you decide to modify the amp, a full report back is requested. I suggest that only a experienced Tech do the mod, or at least have one coach you.

The problem with the sweep tube amps, is of course the high price of the tubes, and the high price of the tubes, repairs, and short life span of the tubes.

We just had a discussion on the larger amps using sweep tubes as compared to using a ham amp. Ten Tec makes a amp using the 4CX1600 tube that will do 2500 with no problem, and can certainly be throttled back to do say do a 1000 all day long. The cost is around 3 grand, for a life time of amplifier use. This is used as a example. But in your case with a Phantom 500, that uses what 10 or 12 6LQ6 tubes, thats $800 to 960 dollars for the original tubes at 80 dollars each. You can see that that the cost of a ham amp is justified.

Please let us know how you make out there.

Pardon?

Amateur licences are issued by the ACA. Whether or not you choose to join the WIA (any division) is up to you.

Exactly - it contains a VHF receiver so it's certified to Part 15.
That does not mean however that all commercially manufactured amateur
equipment requires type acceptance. If all amateur equipment required
type acceptance or FCC certification it would be included in Part 97,
the amateur rules.

Hello Roger Beep:

Yep the 148 is still a front runner. I have one of the oldest 148's and it just keeps on ticking.

I've used Texas Star amps with great success, and I hear nothing but good stuff on the Dave Made amps.

The most important part of the mobile installation, is not having the ignition or alternator noise masking all the locals out. The 148 has a great noise blanker on AM but it sucks on SSB. Suggest you look into this when considering a new radio.

I use a Francis Amazer 96 inch Fiberglass Whip Antenna. And after sniffing out some noisy electrical things on my truck, I use a old Emperor 5010 I believe, because it has a great noise blanker on it. And I can keep an ear on both 11 and 10 meters.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

6131. Lurker with questions and observations

Newsgroup: rec.radio.cb
Date: 2001-07-29 14:31:06 UTC
From: Roger-Beep@webtv.net
Message-ID: <14094-3B641E2A-3@storefull-234.iap.bryant.webtv.net>
Source record: 90219

Hello all,

I've read just about every message within this group that's available to me via webtv newsreader. With the exception of a few personal battles going on, I've found the group to be informative and entertaining.

I've also found that there are (or appear to be) more Amateur Radio operators in this "CB specific" newsgroup, and am curious as to why. I believe I came across quite a few Amateur Radio specific newsgroups when I searched for a "CB Radio" forum.

In any event, a little background:

I'm 33 years old and have that "CB itch" of years ago. About 10 years ago, I owned a small mobile configuration consisting of a fully modified Cobra 148GTL, a Texas Star DX350, a frequency counter, a DM104 teardrop, an 8'(?) Francis Whip, a DF-1 Direction Finder (built from a Ramsey kit), and an FM transciever (Ramsey kit) to use as a "private" channel among a small mobile group of friends.

Now, from reading the messages in this group, it's apparent that those who hold Amateur license frown on such system setup. I grant you the illegality of such, but to be perfectly honest, I don't care.

I enjoy the "toys", cheap as they are, and intend to purchase a similar setup sometime soon. Problem is- I have no idea what's available today, and what the prices for such items are.

Since I've moved away from my Brooklyn neighborhood, I'd also lost contact with those friends who were into "big radios". Of course, mine was never considered "big" by any means, but it was sufficient for my needs, and enabled talking over the "kids".

With this said, if you're an Amateur operator, and you frown on my agenda, so be it. Let's agree to disagree now and avoid any possible future flaming. It's silly.

To anyone else out there, what would you advise I purchase today? Is the Cobra148GTL still a good radio? I don't intend to get a license, so I don't need a 2950 (ie. etc.), but I would like a good AM radio that's capable of upper and lower modification. I was considering a DaveMade amp. Has anyone dealt with him recently? A few friends of mine had, about 10 years ago. Are his products still what they were?

Anyway, looking forward to any positive commentary. Constructive criticizm is also welcome, however the morality/radio/internet-fcc police are not.

Thanks!

Roger

I'm not sure what this post has to do with recreational citizens band radio, however I'll participate in the newest thread since I'm a newcomer :-)

I am college educated, albeit "Community College" (yikes!)

I am a civil-service employee for the City of New York.

I weigh 200 pounds.

I have never been arrested, detained, questioned, or otherwise contacted by any law enforcement agency (with the exception of minor parking violations and driving infractions many years ago).

I have never used any illegal drugs (and was quite the bore while lecturing my friends at parties about such usage).

Hope this helps!

Landshark, Let me ask you a SERIOUS question. Seems like anyone with a name you have never seen post before Is me ?

How do you come to this conclusion.? As I stated before even with my name changes I most certainly post from the same IP address no deception involved. If I want you to think I am someone else I would certainly use what the others are using out here to post anon, supernews,newsranger, google etc. But you do not see this from me. hell you even accuse me of having an aol account. why do I need aol I have an isp with a cable modem connection are you really reaching for something or what. Have I ever said that I don't change names regularly. I really want to know why it bothers you so much. Have you ever thought that I do this because you don't like it or because it burns your shorts. I do appreciate all the names you have attributed to me. Especially the ones which are not me and are not posted from my IP address. I have told you many times . Yes I change names like my underware but they are all the same ISP/ and IP address. Perhaps one day you will realize this, and when you do You will make a formal apology to the NG. Are you bitter that your aaron or doug posted sensitive info on you, and I twisted the screws a little harder, now you feel compelled to accuse me of being everyone in the NG. If thats the case I must really be getting into your mind..

6138. Re: D&A Phantom 500

Newsgroup: rec.radio.cb
Date: 2001-07-29 15:14:03 UTC
From: Bill <wdecker1@rochester.rr.com>
Message-ID: <%KV87.163923$T97.19148489@typhoon.nyroc.rr.com>
Source record: 90223

A little input from the sidelines, there are a lot of nice amps running 3-500's out there that will run a KW nice and easy and can be had for 3-400 bucks, had a 221 a few years back with the 10M kit that would give good results, and you also didn't need 100W to excite it. A good strong 10M rig would drive it and it would just loaf along with a couple of hundred out the wire, at that rate the bottles would, or should, last seemingly forever. It is a shame that the sweeps have been driven sky high, because there are lots of good old amps floating around that are just financially bad investments with the tube prices.

> a ham selling only to hams". This is just another CB myth...like the
> one about "the magic coax length".

Stop blowing smoke and stick to the facts. The seller of this posting was selling a KRIS FCC "Type Accepted" amp which you touted as being illegal, which it was/is NOT, in addition you accused the seller of violating FCC rules, which has NOT been proven by you or anyone else in this thread.

As far as coax is concerned, whether it be magic or not, hit the ARRL Handbook....however by what you've demonstated in this thread about your ability to comprehend what you read, I doubt the ARRL Handbook will do you much good.

6140. Re: Last day on ebay for this 10/11 meter antenna 5/8 wave

Newsgroup: rec.radio.cb

6141. Realistic TRC-48 Microphone Connector

Newsgroup: rec.radio.cb
Date: 2001-07-29 15:40:36 UTC
From: surrrfur@aol.com
Message-ID: <20010729114036.27103.00000676@mb-md.aol.com>
Source record: 90225

Does anyone have a TRC-48 schematic that shows the pin-out connections for the microphone. I need pinout assignments of the 5 pin mic connector. Would help if they could be provided reading clockwise from the keyslot on the bottom and with perspective from outside of chassis. The mic I am using is not keying the transmitter. Thanks in advance!

An amplifier built by an amateur for their personal use may be sold, but only
to another amateur, and only one per year.

Exactly otherwise you would have X-force and Davemade amps all over the
place with the manufacturer saying well they are for ham use It is up to the
end -user to use it correctly.. Nah Sorry I don't work that way fellas ..

> you have never seen post before Is me ?
>
> How do you come to this conclusion.? As I stated before even with my name
> changes I most certainly post from the same IP address no deception
> involved.

True, when posting from your account @Home you are not fooling anyone.

>If I want you to think I am someone else I would certainly use
> what the others are using out here to post anon, supernews,newsranger,
> google etc.

Who says you don't use those services? As you are fond of saying "prove it"
You can't anymore then I can, so that is a moot point.

> But you do not see this from me. hell you even accuse me of
> having an aol account. why do I need aol I have an isp with a cable modem
> connection are you really reaching for something or what.

I believe that I only accused you once or twice. If more, it was strictly to
irritate you. Other people have accused you too, but again nothing can be
proved, so moot point.

> Have I ever said
> that I don't change names regularly. I really want to know why it bothers
> you so much. Have you ever thought that I do this because you don't like
it
> or because it burns your shorts.

You might think it bothers me, but if you look I'll bet that you'll see
maybe four to five post a week. Usually before I go to work and maybe when I
get home in the evening, so I don't think I'm bothered to much by it.

> I do appreciate all the names you have
> attributed to me. Especially the ones which are not me and are not posted
> from my IP address. I have told you many times . Yes I change names like
my
> underware but they are all the same ISP/ and IP address.

Your welcome!, I thought you would like that. Sure why not throw in a few
names that might not be you, but again, as you say, you could have those

accounts and we would never know. Hell I could be those people, I might be playing both sides of the fence just to be argumentative.

> Perhaps one day you
> will realize this, and when you do You will make a formal apology to the NG.
> Are you bitter that your aaron or doug posted sensitive info on you, and I
> twisted the screws a little harder, now you feel compelled to accuse me of
> being everyone in the NG. If thats the case I must really be getting into
> your mind..
>

Actually I know you were the one that found those post and forwarded to Doug & Frank, I have been told by one of your "friends". There is no such person as Aaron, that was proved along time back. Yes you were fanning the flames and as I said, I didn't care because I didn't make those posts.
I won't apologize, I haven't done anything wrong here, anymore than you or the others you have mentioned.

I have a question for you. Am I Jason Halverson or not? I want to know who I am. You posted This:

> From: Jason Halverson (lndshark@ix.netcom.com)
> Subject: Swap File and MaxPhysPage(in system.ini) settings
> Newsgroups: comp.os.ms-windows.setup
> Date: 1995/05/28
>
> I need to know the proper MaxPhysPage setting for the system.ini for
> WFWG 3.11. I have 20Mb of physical RAM (20352Kb). The format is:
> MaxPhysPage=<hex page number>, where <hex page number> is the maximum
> physical page of RAM. I read that windows only recognizes the first
> 16Mb of RAM. I have an 11Mb Perm Swap file, but when I start windows,
> I have only 23Mb free. Any help is greatly appreciated.

Now if that is from my account as you have claimed that would make me Jason Halverson Right? But yet you have not proved what my name is, with that coming from my account, that would make my name as Jason, but I have told you it is not, so how did he post from my account?
Oh, right you proved that, ok. I guess, I proved that you have more than one account too? Moot point.

Landshark

I have been expoused to fairly high (several watts\CM)
RF at variious freqs from 100KHZ to 18GHz. And I never
"saw" any thing odd. The only oddity I ever experienced
was when I was downrange of a giant 400MHz radar that was
being tested in Ft. Knox back in 1961. I "heard" this
"buzzing" "sound" that seemed to be coming from the middle
of my head. The other recruits and the drill sargent
"heard" it also. I think it was for a DEW line installation.
BMEWS comes to mind. I was a young recruit, and though I had
been a ham for 5 years, I did not know enough to even think to
ask any questions. But as a recruit, I did know enough to
keep quite.
There ought to be a lot of ex military techs that worked on,
or service that style radar. There were many sites from Greenland
through Alaska. And I bet they have meetings where these guys
get togather every now and then.

The eyes are the most affected part of the head as they contain more water. Just as heating food in a microwave... Food with more water in it heats faster and better, something with no water in it doesn't heat up at all. With RF it is the frequency that is important. Cell phones are dangerous as they operate with the same microwave frequencies that microwave ovens use to cook your food. Older 49 Mhz cordless phone are much less of a concern.

Microwaves resonate at the molecular level.

[snip]

I see why this one tripped the Troll-o-Meter at 30 over! (grin)

On the other hand, if Roger is serious, here is a measured response and some advice (which he solicited).

1. There are hams who enjoy CB, either because that's how they got started in the radio hobby, or because they have discovered the unique nature of CB and find it enjoyable.

For instance, when I travel any great distance by automobile, I turn off the 2-meter gear and concentrate on 11 meters. The road info is more plentiful (often more timely and accurate), and it's fun to listen to other travelers, rather than breaking into a QSO of friends on a VHF repeater in a strange city.

2. As you return to the hobby, Roger, you will find that hams, in general, don't give a flip about what you're running on 11 meters (or on the freeband, for that matter). The exceptions are if you do something to adversely affect 10 meters, such as operating within the ham band without a license and without regard to the band plan (AM on a CW frequency, for instance). Another example is if a CB station is operating in such a manner that it "splatters" into 10 Meters, even though the operator's radio may be tuned elsewhere.

Obviously, in the second example, you are likely to incur the wrath of fellow CBers, also. Nobody likes a "band hog". You also may tick off your neighbors. According to the FCC's Riley Hollingsworth, neighbors are the biggest source of complaints about CBers. High power on 11 meters is notorious for getting into telephones, television sets, and stereo amplifiers. And if the neighbor happens to be a church, don't operate on Sunday morning. (Ask some of us why!)

Now, about what to buy. Be VERY careful about export radio transceivers which do not have frequency readouts--only band and channel switches. It is easy to get into the Amateur allocations with such a radio, without realizing it.

Some things have changed on CB since you last operated 10 years ago. For one thing, there is less "congestion" than before. Another change is that language

has improved--especially on Channel 19. You still find individuals who are "rude and crude". But the majority are great to listen to. Overall, you will find the modulation cleaner. Fewer of us are overdriving our radios' audio.

The measurement of standing waves on a transmission line yields information
about equipment operating conditions. Maximum power is absorbed by the load
when ZL = Z0. If a line has no standing waves, the termination for that line
is correct and maximum power transfer takes place.

Characteristic Impedance, Z0, is the ratio of E to I at every point along
the line. For maximum transfer of electrical power, the characteristic
impedance and load impedance must be matched.

A transmission line that is not terminated in its characteristic impedance is said to be FINITE.

A transmission line is either electrically LONG or SHORT if its physical length is not equal to 1/4l for the frequency it is to carry.

CHARACTERISTIC IMPEDANCE, Z0, is the ratio of E to I at every point along the line. For maximum transfer of electrical power, the characteristic impedance and load impedance must be matched.

A transmission line that is not terminated in its characteristic impedance is said to be FINITE.

A NONRESONANT line has NO STANDING WAVES of current and voltage and is either infinitely long or terminated in its characteristic impedance.

A RESONANT line has STANDING WAVES of current and voltage and is of finite length and is NOT terminated in its characteristic impedance.

Questions:

1) A nonresonant line is a line that has no standing waves of current and voltage on it and is considered to be flat. Why is this true?

2) On an open line, the voltage and impedance are maximum at what points on the line?

3) At what point on an open-circuited rf line do voltage peaks occur?

4) A transmission line is either electrically LONG or SHORT if its physical length is not equal to 1/4l for the frequency it is to carry

Helmet, So what you are trying to say is that if you had a 1/2 wave length or multiple there of the impedance you see at the load will repeat at the source and that other points along the line there will be different spots of voltage/current minimum/maximum.

Very informative link.

Jay & Lurker:

NO, the 148 is NOT a "good runner." It is NOW made in Communist RED CHINA and is a piece of junk compared to the old ones. This CB has been made in 4 countries in the last 5 years or so. When they move the factory to another country, the QUALITY definately goes down. Now being the quality CB shop that I am, I don't want to sell anyone INFERIOR JUNK. Also being an American forbids me from supporting or trading WITH THE ENEMY. Communism is our enemy (China), N8, incase you forgot because your brainwashing radio-vision that tunes to 52-890mc will tell you that Wally's world, communism, and CHINA is our friends! Maybe all or most on that potty band SIN't our friends!!!!!!!!!!

Hello Roger Beep:

Yep the 148 is still a front runner. I have one of the oldest 148's and it just keeps on ticking.

I've used Texas Star amps with great success, and I hear nothing but good stuff on the Dave Made amps.

The most important part of the mobile installation, is not having the ignition or alternator noise masking all the locals out. The 148 has a great noise blanker on AM but it sucks on SSB. Suggest you look into this when considering a new radio.

I use a Francis Amazer 96 inch Fiberglass Whip Antenna. And after sniffing out some noisy electrical things on my truck, I use a old Emperor 5010 I believe, because it has a great noise blanker on it. And I can keep an ear on both 11 and 10 meters.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Dick:
The "Clue" is this, Sunny! These young newer CB shops (Incompetants, Butchers) have the mistaken belief & religion that MODULATAION is better than power. And because of this false doctrine, they will go to 1000% and think they can sound "good" walking on anyone else (otherwise known as overpowering). I'm afraid their false beliefs will send them to RF HELL because MILLIONS of people are SICK of their loud sounding JUNK that their modulation kit installers have made!!!!! (the BEST places in the land DON'T put them in, so where does this put you, Mr. "Modge" kit installer?

with all due respect JJ just what is this piece of shit designed to do? It seems it is an interesting example of non-linearity for those who think audio is the difference between no speak and full-bore output on the theory that this is real Amplitude Modulation. I am sure the first guy to steal a carbon mike out of a payphone and wire it into the keyjack of his MOPA sometime about 1916 thought so too. Fakes the living shit out of a receiver's AGC line but beyond that it doesn't do a hell of a lot for the price of beans in Borneo. If it manages 130 PEP that is a thunderous 35 watts which just might double your range if you don't mind your contacts being short as you irritate the daylites out of anyone you talk to.

Clue me, man

Message-ID: <3b644a81@news.planetc.com>
Source record: 90245

About your survey: WHY ask if someone is College Edjumucated? The question instead should be "Do you fear God," since the fear of God is the beginning of wisdom, instruction, and understanding. Or were you trying to determine how many college graduates do not have jobs? Gainfully employed? Does this question mean "Do you have enough ambition and drive and expenses to have a job?," or were you trying to determine if the Govt. or Foreigner controlled UnConstitutional "economy" has you in dire straights in this worst slave system since ancient Egypt? And what of the 250 lb limit? Are you afraid of BIG people, or are one, like your e mail address suggests? What about "arrested for DUI?" Do drunks use CB's to avoid getting caught? Do you know that DRUNKS KILL people with their cars? I went to a benefit yesterday for a woman & kid that got hit by a drunk and damaged. The Drunk was KILLED (17th offence or more) and went straight to the lake of fire. This is your best question so far! Possession of illegal drugs? You should of asked "Are you a non-Bush-Clinton-CIA drug union drug peddlar-pusher, or with the CIA clan?" Prescription or not, DRUGS IS BAD, as the fameous black man once said! Based on some Hambo posts, I would say that some of the Hamateurs that post here must be on drugs! "Disordly conduct or nuisance ordinances?" If they is here, they don't have time for being disorderly, or for being a nuisance other than on here! And Ordinances are NOT law, by the way. They are corporate rules! WHY do you perceive CB'ers to be what your survey wants them to be? Couldn't you come up with BETTER questions?
Dave!!!!!!!!!!!!!!!!!!!!!!!!

The main effect to the eyes from the exposure to radiowaves would be that it would cause heating of the fluid in the eye. This can cause cataracts over time. The average human eye has a size that makes it a resonant cavity for radio waves at a frequency of 1270mhz. The average sized human head is resonant to radio waves at about 400mhz, a babies is resonant at 700mhz. If you operate as a 13cm amateur, don't use a handheld much, or better yet, at all.

6163. NOT made in CHINA CB's are GOOD !

The 510 is a CB and NOT a series! This is CB, not baseball, Sunny! The colt you won't find--from the early 80's, an OK CB but the 510 is better. This "feeling" that you have about "Electronic Devices" means to me that you have been brainwashed to be a CONSUMER, instead of a CUSTOMER. You will only have this problem IF you buy electronics or anything else that is MADE in RED CHINA ! Since their communist slave system is worse than ours, there is NO QUALITY so you must buy every year or 2, because the slaves all get the same wages, unless of course if you are in the party! A consumer CONSUMES JUNK, while a Customer gets his quality unit FIXED by an independant (competant) non-modulation kit installing shop ! When you buy UNIDEN CB's, you buy quality NOT made in RED China. And RED means that you will not support the reds or make your bank account go in the RED by continuing to support these criminals with their slave trade made TRASH they make, commonly called Cobras and Radyo Shack today.

>At this rate does anyone think they will come out with a 2m all mode rig?
>Has anyone tried the new 6 meter radio? Looks good to me!

That's been the rumor for some time. RF Ltd. was also rumored to be comming out with an all mode 2m rig, although they have a 40m rig under their Magnum moniker already. Here's the link.

http://www.magnumradio.com/Default.htm

Hmm, looks familiar to this 11 meter "enthusiasts." If it is true that the CW requirement is summarily dropped in 2003, then look for the AR frequencies to become the "freeband." I find it somewhat amusing that while Alinco scales back its US operations and Kachina folds its AR operation completely, companies like Ranger (RCI) and RF Ltd. (Magnum) are expanding their product lines. (Not to mention the President Roosevelt, purportedly released in the US under the Superstar name.)

I occasionally present this little "what if." Is it inconceivable that at some point in the future, we might find ourselves wishing we could turn back the clock to this very period, while we still have an opportunity to come up with some semblance of a "workable" truce? Hint: operative word in preceding sentence being "we." (all inclusive) Take it easy. Aristotle clear on your final.

If Dave was as religious as he so claims, he wouldn't be writing diatribes on Sunday afternoon. Perhaps we should all begin a collection to buy Dave a few weeks in a spiritually uplifting facility somewhere that can care for him until his body chemistry is back in balance? Anyone else living in eastern Tennessee that could help with this by visiting Dave periodically? Up until now, I had just chalked it up to abject ignorance. I guess I overestimated the poor guy.

Wouldn't hold my breath on 2003, Bert. It is not on the agenda and it is
getting late. There are rumors that some countries are not happy with the
result of the 5wpm change. You will find that things like this are settled
in advance or at the hospitality suites in Geneva so barring virtual
unanimity there is a good chance the issue will not even be considered at

the meetings.

Excellent reply.
I do not interfere with my neighbor's tv set.
nor any emergency services.
I do not have a permit or registration for my GUNS,
nor will I allow my government into my home to
take an inventory of them. This is a right guaranteed
by the US Constitution. [thus far].
The same applies to my communications devices.
Good analogy: As long as I'm not hurting anyone
or interfering with anyone's rights, I HAVE A RIGHT
to privacy, as well as any means of communication (or defense,
-> as well as defense from intrusion into or restriction of
my communications). The first signs of governmental oppression,
totalitarianism, dictatorship: they take control of the media
and over-restrict/regulate other channels of direct
citizen-to-citizen communication.
Thank de Lawd for the Internet. That genie is out of the bottle.
Maybe I should start doing all my DXing here instead! ;-)
We all know 'Big Bruddah' (Uncle Charlie, or some bureaucrat
with nothing better to do) is watching (listening) though.
Good thing our random little lives are too numerous and
too boring for them
to bother with us, or bother us. [thus far]. :-))
But... is that the only thing standing between us and
our Constitutional rights? Geez, scary thought.
-Other2

Actually, I found them on my own and I posted them without emailing
them to anyone. You didn't see that because you had me in your
killfile. Go read the archives and you will see for yourself.

> There is no such
>person as Aaron, that was proved along time back.

That's funny, didn't you just get done saying, "but again nothing can
be proved, so moot point"?

> Yes you were fanning the

>you or the others you have mentioned.

Except for being a hypocrite -- spewing profanity and flaming for
years, and then doing a 180 just so you can accuse the anti's of the
same and complain to their ISPs about it.

>I have a question for you. Am I Jason Halverson or not?

Who cares? You are a hypocrite, that's all I need to know. BTW, when
are you going to ship my Palomar? You know, the one of many you are
going to give away?

Now you are lying out your teeth, I have never ever e-mailed Doug, Frank or Leland, Aaron or anyone on this NG. Now you are telling stories I found those posts after they were already posted to this NG By one of your friends who you happened to be feuding with, so anyone can do a little research after the fact. Keep trying Strawman...

Frowning on illegal CB is not confined to those who hold ham licenses.
In fact, a few of the hams in this NG are some of the biggest CB
outlaws.

> > my setup... never considered "big" by any means, but it was
> > sufficient for my
> > needs, and enabled talking over the "kids".

I disagree with that attitude because it goes against common courtesy
and common sense. CB radio is not a competitive game where the strong
deny use of the band to the weak. An amp to "talk over" other people
should not be thought of as standard equipment.

> > With this said, if you're an Amateur operator, and you frown on my
> > agenda, so be it. Let's agree to disagree now and avoid any possible
> > future flaming. It's silly.

Sorry. Posting your opinions in a public NG makes you fair game for
criticism. There's no magic phrase you can say that relieves you of
responsibility for your actions.

> > Anyway, looking forward to any positive commentary. Constructive
> > criticizm is also welcome, however the morality/radio/internet-fcc
> > police are not.

Again, this is not about morality. When you buy a CB you agree to
"play by the rules" and respect your fellow CBers. If you want to
flaunt those rules you can expect criticism.

You have come to an incomplete conclusion -- there are also many non-amateur CBers that do not care for illegal operators.

<snip>
>Anyway, looking forward to any positive commentary. Constructive

I have a few cubic yards of scrappers. Lots of old Midlands and Cobras, as well as Kraco, Radio Shack, Pace, Johnson, etc. Even a few SSB and vintage radios. Most are for parts although a few could be fixed. Nothing high-end, no tube rigs. Lots of PLL chips, and I'll sell those seperate if interested. Too many to list, just email me with what you are looking for.

Factual disagreements aside for the moment. I am curious, what makes
you want to see amplifiers used on CB so badly that you'd publicly
defend their sale to freebanders and cbers?

I am going to chime in on this issue. I have found that the Xenon strobes
is that they are too damn bright, especially when they are blue or white.
Red or amber are not as bad, but are still obnoxious to oncoming motorists.

They might be a good thing on aircraft however, if you have ever flown you
realize real quick that other airplanes are difficult to see, and airports
are sometimes hard to spot at night. I also suspect that the airport strobe
lights are designed in a way to not blind the pilot as they are angled in
such a manner as they do not zap you right in the eyes as you approach the
runway, as the strobes on the back of a police car do.

Ive been trying to ddo some research about cbs, andf i figured that the best place was here.

i have a 99 suburban, i recently got a cobra 29 wx st(?) for my birthday. is this a decent radio?

I had a k40 whip with an old radio shack cb years ago. can i use the k40? basicly id like some good range, and id like to mount it on top of the burb, and be able to remove it, and finally do i just have to adjust the swr on the cb for it to work?

on a side note whats a decent range? 1-2 miles?

thanks
jake in illinois

Hello Dave or Debby:

I'll start here with saying I hope I wasn't to hard on Kevin, and meant no disrespect. So I apologize if I was out of line.

But when you advertise a antenna with "heavy duty all aluminum" and a 2 MHz bandwidth, this is simply not true. This is misleading, especially when you call the antenna "*AWESOME*". And you want almost or all you money back on it, yeah I am gonna squawk back about it.

These Italian made antennas use aluminum tubing that has a fine length wise ribbed design, in a attempt to make them stronger. It just doesn't stand up to the weather conditions. ALL, and I repeat ALL foreign base station antennas that I know of, have bent, or broke at the bottom vertical element. I helped install a French Made Sigma 4 look-a-like, and after a wind storm, the antenna had a permanent bend to it, making it look like we still where in a wind storm, or doing 80 MPH on the freeway, in calm weather.

It costs about a thousand dollars to have the metallurgists in Los Angles, test and tell me what type aluminum material the tubing is made from, and I already know its shit, I don't need a material readout from a lab.

Again the guys (about 6 stations) out here in the Mojave Desert, tried the Spectrum 1600, and Sirio 827 foreign made antennas, for a few months, They "ALL" bent or broke from wind damage, in a matter of only a few months.

When I purchased this Sirio model 827, I throw it all in the scrap bin. I wasn't lying come get it! I would not use this aluminum tubing for a broom handle. Knowing full well it to would break at the bottom vertical element, as all the others have. I wasn't going to let this one out of my sight, it parked itself in the aluminum scrap bin. This saved me from explaining to someone who would have bought it, put it up, and was disappointed, and wanted their money back!

All of the Prototype 5/8 wavelength antennas that I have made, to this date have had no wind, or any other damage due to the elements. Because I use the expensive 6063 T-8 aluminum tubing, and the elements are internally reinforced with the same aircraft grade aluminum tubing, 6063 T-8. We tested the vertical and horizontal elements as a fully assembled unit, in the back of a truck, and measured 104.5 MPH wind speed and nothing broke or bent. Oh yes we where worried that the Highway Patrol wanted to throw nets over us and shoot us with a dart gun, so that they could put on straight jackets.

You believe what ever the others say about me, but iffins U is askin me
"I am a bitchen guy" Ten-4.

Actually, I didn't see that, which is why I ignored the non-reply by
Whisky.

>On the other hand, if Roger is serious, here is a
>measured response and some advice (which he
>solicited).

I was, and am serious, and I thank you for your detailed response.

>1. There are hams who enjoy CB, either because
>that's how they got started in the radio hobby, or
>because they have discovered the unique nature of
>CB and find it enjoyable.

I can appreciate and understand that.

>For instance, when I travel any great distance by
>automobile, I turn off the 2-meter gear and
>concentrate on 11 meters. The road info is more
>plentiful (often more timely and accurate), and it's
>fun to listen to other travelers, rather than breaking
>into a QSO of friends on a VHF repeater in a
>strange city.

The very reason I enjoy the hobby. Additionally, my friends and I also
served as a local highway "help group" not unlike "React", although not
officially sanctioned by such.

>2. As you return to the hobby, Roger, you will find
>that hams, in general, don't give a flip about what

>you're running on 11 meters (or on the freeband,
>for that matter). The exceptions are if you do
>something to adversely affect 10 meters, such as
>operating within the ham band without a license
>and without regard to the band plan (AM on a CW
>frequency, for instance). Another example is if a
>CB station is operating in such a manner that it
>"splatters" into 10 Meters, even though the
>operator's radio may be tuned elsewhere.

I'd also found that the majority of people who repaired and sold such CB-specific amplifiers are amateur class operators. My point-of-reference was to those here in this group who frown on these units. My intention was to avoid the legality issue and net-copping of some (as I'd witnessed via lurking) by posting background information about myself, and my intentions up-front.

In any event, I have no intention on interfering with amateur class bands. My setup was fully-filtered, using premium coax and fully chasis-grounded.

>Obviously, in the second example, you are likely to
>incur the wrath of fellow CBers, also. Nobody likes
>a "band hog".

No intention to incur the wrath of anyone.

>You also may tick off your neighbors. According to
>the FCC's Riley Hollingsworth, neighbors are the
>biggest source of complaints about CBers. High
>power on 11 meters is notorious for getting into
>telephones, television sets, and stereo amplifiers.
>And if the neighbor happens to be a church, don't
>operate on Sunday morning. (Ask some of us why!)

I recall full-well the ramifications of such operation and have learned from others' mistakes :-)

>Now, about what to buy. Be VERY careful about
>export radio transceivers which do not have
>frequency readouts--only band and channel
>switches. It is easy to get into the Amateur
>allocations with such a radio, without realizing it.

Which is why, after the Cobra 148GTL was modified, I also used a frequency counter. I believe the radio was capable of a few channels below "1" and above "40".

>Some things have changed on CB since you last
>operated 10 years ago. For one thing, there is less
>"congestion" than before. Another change is that
>language has improved--especially on Channel 19.
>You still find individuals who are "rude and crude".

>But the majority are great to listen to. Overall, you
>will find the modulation cleaner. Fewer of us are
>overdriving our radios' audio.

Well this is good news! I thank you for your reply, and look forward to getting back into the "swing" of things :-)

Regarding the post about the newer Cobra 148GTL radio: I recall that this radio had changed manufacturers back when I first purchased it years ago. I sought and found an original new unit at Millies CB Stop in Brooklyn, however, today, it would be quite difficult to find such a new unit.

I'm happy to hear that DaveMade products are still what they were, as well as the Texas Star equipment. This is also good news.

Question:

If an original "new" 148GTL isn't an option, using this radio as a guide, which radio would best suit my preference?

Thanks again for all the replies. To those who offered their opinion as to my agenda without replying directly to my questions, I say, our opinion differs, and thanks for posting.

My first radio was a Cobra29LTD, used in conjunction with a (mag-mount) K-40, and a DM104 power mic, then I purchased a Wilson 2000. I preferred the Wilson, but the K-40 worked fine.

I still have the radio. Most of the antenna is still in the truck I sold years ago :-)

You know why they replace them? I can think of several reasons. The biggest is that the manufacturer along with MSHA require the harness to be replaced after ANY fall. Thanks, but I'll trust my life to only a NEW harness. You don't know what a used one has been through.

Hey Dave.....I have a question for you. Being the good quality CB shop you
are
selling only that good "quality" american made in the good old USA stuff you
are, I am curious to hear excatly WHAT BRAND you are selling?
Last time I checked NO CB's were manufactured here in the USA any more.

Chief Wimpy scared:
Your right, because of the communist policies of THE government, all US CB manufacturers were put out of biz around '77 or '78. I worked for Hy-Gain in '77 and those were jap cybernet units made in Puerto Rico. ALL American made antennas are good quality stuff, and I sell very few foreign made antennas (Harada). YOU seem to miss the MAIN QUESTION for me: DO I sell brand new CB units made in Communist RED China? NO. Even if a customer wants one I SAY NO and tell them why. Most people want quality except the liberals which are in bed with China (Billy Clinton) so most people are glad to get better built units, not JUNK made by slaves all making the SAME WAGE, except the party members of course! MacArthur came back to the Phillipines, so Uniden makes them there!!!!!!!

I don't have the schematic handy, but it is probably a standard 6-4-4
setup: 6 crystals for the master oscillator, 4 for the Rx osc, and 4
for the Tx osc. The two groups of 4 will increment or decrement by
10kHz except for the last one, which will inc/dec by 20kHz. The third
Tx crystal is your culprit. I probably have one, just let me know what
the crystal freq is.

And since you have different Tx and Rx crystals, yes you can still
receive on those channels.

> if there are still some out here.

My, my such emotion. Probably about the same level as when you realized someone sold you a bridge in Brooklyn.

The 'swing thing' is an antiquity in AM circles reaching its peak about 1940 with Taylor Modulation. In general, one or both of two things is happening: some audio power is being used to power the final (obviously not the case here) or the current draw of the tube is being varied at an audio rate or close to it so that carrier keeps up with the audio. This was usually done by fiddling with the screen voltage of a tetrode, see Clamp Tube Modulation. I would suspect that is happening here. You have a jumpy 35 watt more-or-less linear amp.

This was probably the last gasp of the 'we are varying amplitude' school of AMers as the world learned of the hetrodyne idea courtesy of Major Armstrong. Similar techniques were used in the shortwave broadcasting biz to save finals, electric power, and give an illusion of louditude; they resurfaced again in the 50's with Controlled Carrier as AM gave way to SSB. As I have noted here AM was outlawed for most non-broadcast or hobby usage in 1972. Some carrier-fiddling continues in some broadcast use today but you might be amazed at how an AM signal is produced these days.

I am reminded of an episode of the Equalizer in which McCall's groupies had just left a rival gang a smoldering ruin when the rival Boss said, "I

thought I hired professionals". McCall replied, " You did, they just weren't very good ones". You may well have forgotten more than I will ever know, it was just that it was wrong.

As far as normal, how normal do you have to be to buy a bridge in Brooklyn?

Dick N&#65533;BK

Hello Aaron,

For clarification purposes, and because you isolated the comment I made without proper context reference, my quote was intended to save those (like yourself) who have issues with my operating an AM amplifier, the time and wasted energy, and bandwidth, of attempting to discuss or debate the legalities of such action because nothing you could say will sway my intent.

I can respect one's opinion, but neither care about it, or implement it. If you took personal offense to my initial post on a usenet BBS, I can do nothing more than apologize.

In any event, I don't think I've been disrespectful to anyone.

Thanks for posting!

Hi All, I have a Palomar 90A base amplifier for sale. It is in near new condition, both cosmetic and functionality. I'm asking $75.00 plus C.O.D shipping (C.O.D. must be paid up front)

I also have a Courier Centurian 23 channel SSB base station in near new condition as well that I would sell for $50.00 plus shipping up front. I would sell both together for $100.00 plus shipping.

Email me and let me know if you are interested in either or both..
Thanks in advance.....Doug

>probably a standard 6-4-4
>setup: 6 crystals for the master oscillator, 4 for the Rx osc, and 4
>for the Tx osc.

It looks, by the physical grouping anyway, to be 6, 4, 2, 2. Most of the crystals have only a Johnson part no., and no frequency. I can find a frequency marking on 6 of the 14of them: 6.1504, 6.1904, 6.1704, 5.7250, 5.7350, and 5.6950. Does this move things along any?

Thanks again-oh- is there anyplace on the web that post schematics for equipment such as this?

Matt

From: David Kaye <dk@removethis.area.com>
Message-ID: <9k2jmf$mtl0$1@rn.area.com>
Source record: 90273

Dave or Debby wrote the quoted material below:
" SODOMITES will NOT inherit The Kingdom of God !

Gosh, I'm not a sodomite. I don't buttfuck. I only suck dick. Thus, I am not a sodomite, but apparently Christian minister Jimmy Swaggart *is* a sodomite. He's the Christian minister who was arrested with the prostitute in the New Orleans motel. She testified that she specialized in receiving anal sex.

" (That means you perverts will be CRISPY CRITTERS in THE lake of FIRE)
" !!!!!!! REPENT (Turn from) all your EVIL ways and LIVE, and GET OUT of your
" "good buddy" vile, disgusting, SICK DEATHSTYLE !!!!!!

Oh, get over it. Christianity preaches FICTION. There is no "God" who will sit in "judgment" of anyone. We create our *own* world, and our *own* heaven and hell right here. Christianity is perpetuated because it keeps the masses of people from overthrowing the government. Why? Because Christianity preaches to tow the line and accept fate today because there's supposed to be something "better" after they die. Christianity is a fiction nobody with half a brain believes.

I am not anti-God. But God and the fiction of Christianity are two very different things. Unfortunately, many people are not smart enough to know the difference.

Physically they could be grouped in just about any order.

> Most of the
>crystals have only a Johnson part no., and no frequency.

The frequency is usually marked either in ink or stamped in the metal
can. The stamped ones can be hard to read sometimes.

> I can find a frequency
>marking on 6 of the 14of them: 6.1504, 6.1904, 6.1704, 5.7250, 5.7350, and
>5.6950. Does this move things along any?

The two groups are going to be:

6.1504
6.1704
6.1804 (not marked)
6.1904

5.695
5.715 (not marked)
5.725
5.735

The order is reversed (the 20kHz gap is after the lowest freq) so your
bad crystal is either 6.1704 or 5.715, depending on which group is for
transmit. Since I don't have a value for the master osc crystals, I
couldn't tell you which is which. That doesn't matter much, since I
don't have either of these crystals right now. I can stick a note on
my bb and let you know if I find them, or you might try some of those
CB shops and crystal swap boards.

>Thanks again-oh- is there anyplace on the web that post schematics for
>equipment such as this?

There are not too many CB schematics available on the net. The problem
seems to be copyright issues with Sams.

You need to change a crystal 41.500 I believe.
Tempo One (aka Yeasu FT-200)
Hey thats not a good radio, besides cooking to death, rear panel pots, other stuff going bad:
1-The single Xtal IF filter sounds lousy in AM
2-AM audio is carrier insert with no speech processor.
3-The VFO drift is awful unless you are lucky and (got a good one with low hours)
4-the Normal/Reverse sideband reading is annoying.
5- I have yet to see one with a accurate VFO
It's Illegal for use on 11 meters.
Steer Clear !

When I refer to the antenna, I am always refering to "Mr pointy", the actual
antenna.

> The interesting thing about common mode currents is that no mismatch is

At this point it becomes a matter of perspective, and misunderstandings can
occur.
That which radiates signal is an antenna. If RF currents cause the coax to
radiate then it could be considered as an antenna or part of the antenna.
A persons view of the components often depends upon their technical
background and requirements. While some amateurs may see the coax as
antenna, most CBers want their signal to be radiated by the actual antenna,
and so will always see the coax as purely
transportation, and any radiation from the coax as unwanted.

In this ng, some references to "antenna" include coax, others do not. To
avoid this confusion, my references to "antenna" always mean that pointy

thing at the end of the coax.

I could put 150ml of water in a 300ml bottle, ask you if it is half full or half empty, and then take the opposing view. We could argue forever and become bitter enemies, but we would both be correct, there would still be150ml of water in that 300ml bottle, and we would gain nothing.

>
> If there are common mode currents, then the coax is part of the antenna.
> Vary the length of the coax and you vary the input impedance of the
> antenna, thus changing the SWR.

This may be ok for some radio amateurs, but for non-technical CBers this can, and often does cause problems (see below).
I have often been called out to cure such problems, and for CBers, the best answer is to tune "Mr Pointy", and forget the coax length. To use coax length to "tune" the coax and antenna as one at 27MHz could mean removing or adding upto 6 feet of coax, and can be trial and error. With the actual antenna correctly tuned, coax length does not matter - any length will do.

Most CBers buy pre-designed antennas. As the choice of antenna often depends upon stated performance, to detune the antenna in an attempt to change its performance seems to defeat the main reason for purchasing the antenna, and suggests that the user knows more than the manufacturer about how the antenna should be used.

> Even being in the near field of the antenna will cause a change in the
> SWR.

And if the coax is made part of the antenna, then this makes the positioning of the coax more critical as walls, trees, vehicles, or people being close to the antenna can cause reflections.

> To me, the only place where the SWR matters is at the transmitter, where
> it must be low enough that the transmitter will load properly. If an
> antenna "tuner" is used, then SWR becomes even less important. Of
> course, this requires that you have a reasonable length cable run.

To you, as a radio amateur this may be true, but to a CBer things can be different.

If the coax radiates as part of the antenna, then where the coax is routed becomes more important, as this will affect both direction and vertical angle of radiation - and can cause TVI / RFI problems.
Take for example a 1/2 wave vertical antenna mounted on the garden with a horizontal coaxial feed.With the coax radiating as part of the antenna, the antenna becomes L shaped and directional.
Most CBers will want an omnidirectional antenna, and in some countries (including the UK) directional antennas or antennas over a certain length are illegal for use on CB.

I would not recommend that a CBer tries to tune the antenna using coax length. I have never seen a reference book or antenna instruction book which suggests they should. If the antenna is tuned correctly, then a "tuner" is not needed.

> As a further caveat, a low SWR does not guarantee that the antenna is
> radiating with peak efficiency. And maximum radiated power is really
> all that matters.

What about directivity and vertical angle of radiation ?
Unless a CBer wants to "skip shoot" (and possibly break the law in US), then surely a low angle of radiation is important so as not to waste energy on the stars.

Of course, there could be different views on what the term "efficiency" includes. Personally, I would consider that antenna efficiency is about the % of power radiated, but maximum signal efficiency is only achieved if 100% of the power is radiated in the directions you wish it to go (if only it were possible). This is rather like a torch - the reflector does not make the actual bulb put out more power or become more efficient, but more of the light is sent where you want it, and so the light is used more efficiently.

Bill Nelson <billn@spock.peak.org> also wrote in message
news:9jtksr$7ug$2@sevenofnine.peak.org...
>
> I once had a 1/4 wave whip in my vehicle. I could tune the antenna to get

> verify it was possible,

So we agree - it can be done. I have also seen SWR readings of 1:1, but personally, I believe that if a reading is below 1.5, it's not worth sweating over lowering it more.

> because the antenna radiated more power when it
> was tuned for almost a 2:1 SWR. Since I was using a transmitter with a
> tube final, there was no problem with this mismatch - and the signal was

> over 3 dBm better than when "matched".

All references that I have seen state that a 1:1 SWR is 100% efficient, and a 2:1 SWR is 89% efficient (I could show you this mathematically). If you can find a valid reference which states these figures are not true, or an antenna can radiate more than 100% of the inputted power, then please give the reference.
You do not state how, and with what you measured this 3dBm extra signal, but it is more likely that the antenna radiation pattern was modified (see above) ? This does not improve antenna efficiency, but if it sends the signal where you want it, then the signal is being used more efficiently.

Hello Aaron,

For clarification purposes, and because you isolated the comment I made
without proper context reference, my quote was intended to save those
(like yourself) who have issues with my operating an AM amplifier, the
time and wasted energy, and bandwidth, of attempting to discuss or
debate the legalities of such action because nothing you could say will
sway my intent.

I can respect one's opinion, but neither care about it, or implement it.
If you took personal offense to my initial post on a usenet BBS, I can
do nothing more than apologize.

In any event, I don't think I've been disrespectful to anyone.

Thanks for posting!

I appreciate your comments Jay & Bill. I will eventually change out the current 6lq6 with something. I might even just put one 1500 watt ceramic in there. Im sure the 3 big transformers that are already in the phantom will support it. Then I could sell the current sweep tubes to help pay for the cost. Can one of you recommend a good 1500watt ceramic or similar glass?

I suppose you could use a magnet-mount antenna such as a K-40 or Radio Shack #21-9xx (check catalog for different selections). If you use a magnet-mount, use a piece of paper-towel between the magnet and roof so as not to accidentally scratch the surface.

In a leased car, it would probably be best to try and install the unit inside the glove compartment, which could then be supported by removable double-sided tape or velcro. Usually, you will find holes in the rear of the compartment which are covered by a thin piece of fabric. There may even be plastic covers fastened. You could run wiring throgh those holes, or if there's space, around the glove-box itself.

Try to avoid screwing holes into the lower dash, as this could cost you upon return of the car. Instead, use double-sided fabric tape to support a mic holder (you'll probably want to sand-down the shiny underside of the metallic base, or find a mic holder made of plastic).

You might want to use the cigarette lighter for power via lighter adaptor.

Hope this helps!

> defend their sale to freebanders and cbers?

Aaron, or whatever your real name is, there are no factual disagreements here. The facts are very clearly stated in Part 97 of the FCC Administrative Statutes. The difference between us is that I fully understand the regulations and you do not. I also fully understand when I'm dealing with a someone who tries to quell someone else's free speech by using bully tactics.

How do you automatically equate my comments with regard to the selling of a type accepted amp on a newsgroup which has an audience of approximately 50% Ham operators, to assuming I'm defending amplifier use by Freebanders/CBers?

> lasting. running ssb with 572b's in a 811a amp you will never have to
change
> the tubes

Tim you'll have to replace those 572B's sooner or later too. At some point the filament emission will drop, with usage, to the point where it can't support the anode current requirements.

If you are paying attention to specifications the more interesting question is why would a manufacture use a tube rated at 160 watts MAX RF power per tube, and use it in an amplifier where they try to get 200 watts per tube. Dha? The answer to that would seem the amplifier manufactures are playing games with the specifications based on the "typical use" for the amplifier. While the max anode dissipation rating would imply you can get 210 watts per tube, but you can't do it with out exceeding the other ratings, like anode voltage and current. To get a hint of that just look at the notes at the bottom of page one of the PDF file line below.

http://www.svetlana.com/docs/tubeframe.html
(Click on "Amateur Radio Tubes" near the bottom of the right hand column, then go to the bottom of the web page and load the PDF file.)

The notes for both the 811A and the 812A are "ICAS SSB Intermittent voice and 50% Duty CW." No where does it say anything about AM which is a high duty cycle application. I think Richard's remarks about frying the tubes due to AM service is correct. If you where smart about it Tim you would have realized that by just dialing the power down by at least 20 percent, which would not be noticeable by the other station(s), one could save the unnecessary cost involved in retubing a 811A amplifier with 572Bs at over double the cost per tube. Of course if you like to fix problems by throwing money at them..... 8-))

From: Dwight Stewart (stewartx@sccoast.net)
Subject: Re: Respect For Freebanders
Date: 2001-04-30 02:40:03 PST
Twistedhed wrote:
We are good operators and have knowledge of propagation and skip conditions.
    First of all, to be a good operator, one has to obey the radio rules and regulations. Since "freebanders" don't do that, it is absolutely impossible for them to be "good operators." We use Yasus, Kenwoods and Icomm radios
just like you do, so we know technical
issues as well or better.
    Technical knowledge doesn't come from the radio you own. By the way, the correct spelling is "Yaesu" and "Icom." However, the attitude of some hams toward us is rude and condescending. We are treated like 2nd class citizens.
    When you openly violate the law, you deserve nothing more than rudeness from those who understand the value of those laws. And people who violate the law are generally treated as 2nd class citizens, so if you want something more than that, don't violate the laws. We have the same rights under the
constitution as legal hams do.
    And you also have the same responsibilities as everyone else has - the responsibility to obey the laws of this land. If you don't like a law, you're free to advocate it's change. However, you're never free to violate it without suffering the consequences. One of those consequences is the very loss of respect you claim is shown to "freebanders."
For those that do not wish to be under Uncle Sam's thumb, freebanding is a viable alternative to getting a ham radio license. In a country of 280 million people, laws are required to maintain order. That is not just the government's position, Twisted. Those people, who realize the alternative would be madness, demand it. And that (maintain order) is exactly why the radio regulations were written. Your alternative, the use of whatever frequency suits your fancy at the moment, is madness. Likewise, your use of the "freeband" frequencies deprives those who have a legitimate need for those frequencies of their

use. And that can have serious consequences - for example, one common "freeband" frequency is assigned as a Coast Guard Hurricane operations frequency.
What I am saying is that maybe the next time you meet a freebander it might be wise to talk with him before you condemn him. Yes, it would be good to talk to him - anything to convince him that his behavior is both wrong and potentially harmful. However, many of us have tried that in the past, and are simply tired of trying to convince the village idiot that his behavior is harmful to this community of radio operators.
I am QRT and standing by. (No flames answered. Please reply via email)
  Twisted, what kind of scam are you trying to run? You've posted this messages several times before, each time asking Hams to contact you via email. What happens to those poor souls that actually do contact you via email?
Dwight Stewart (W5NET)
http://www.qsl.net/w5net

"PST again? Hahahah! Not in my posts. I would have answered in much the same way, since I didn't write it. Matter of fact, Mr. Stewart apologized to me for falling for your forge after checking the headers on this very post. Ask him. He had the sense and courtesy to apologize when wrong. He and I exchanged a few emails and I found him to be quite the pleasant gentleman and a ham who loves a good debate, and let me tell you, he puts you both to shame. He likely can also run circles around you in the technical department as well. While Mr. Stewart and I are not always in agreement, I have read many informative and knowledgeable posts by him assisting others, it would be in your best interests to follow suit. Perhaps he can assist you in a bit of diplomacy as well. Your jealousy now has you attempting to malign and drag other hams into your pile of dung. A new low, even for yourself.

Not only was Dwight able to read the proper headers, QRM saw through your crossposting BS as well:

I didn't know this was still kicking around. Check the rules
out by reading them. Also, note the difference between
"type acceptance" (commercial) and "type approval" (part 15)
for manufactured rigs and amps. "FCC certification" hasn't
been required since the 80's.

Then note FTC fair trade laws regarding discrimination.
It is not required to have a license to buy transceivers.

The laws regarding amps in recent years, is how FCC is
trying to close up ham radio as a loophole. Also beware,
getting a license for your ham radio doesn't cover illegal 11 m
operation. Along with the license is FCC inspections of
your station and equipment for compliance and signal purity.
So the whole thing falls to the licensee, or operator (if
unlicensed bootlegger). It's like a blanket search warrant,
but you can refuse, but then you lose your license and wind
up on charges for refusing a lawful inspection. The FCC
doesn't work like regular laws either. Here's how it goes.
when the FCC decides you have broken the law, they issue
a "Notice of Apparent Liability" which is basically a fine of
several thousand dollars. If you want to fight it, it comes out
of your pocket for the legal expenses to get a federal judge
to hear your case. Guilty unless you find a way to prove
yourself innocent. A lot of Hams have their radio shack out
back, separate from their house.

"Type Acceptance" applies only if the equipment is to be commercially
manufactured and distributed. Any licensed amateur can homebrew radio
equipment as long as the equipment meets spurious harmonics and/or output
standards.

Yes. The coax on a mobile magnetic mount is routed through the near
field of the antenna where RF currents can be induced on the
coax exterior.

> : The two most likely culprits are standing waves and poor grounding at
> : the transmitter. Standing waves will directly induce RF onto the
> : shield via coax containment failure, as I have pointed out in my page.
>
> Why would "containment failure" occur with standing waves, but not the
> normal rf that travels through the coax?

I already asked this question and got no answer. I asked for references
and got none. If RF can travel up the coax with no problem, why would
it start leaking when some travels down the coax?

The signals within the coax are differential (opposite of common mode
currents). That is, the inner conductor current is equal and opposite
to the internal shield current. Thus, no external fields exist
because the internal currents cancel out (Gauss' law). This is why
even unshielded balanced (differential) transmission lines do not
radiate; they do contain near field electric and magnetic fields but
no radiating electromagnetic field.

The only way RF is radiated is when there is a current imbalance -- a
common mode current. Reflected signals within the coax and standing
waves do NOT create common mode currents.

I have never found a glass mount antenna that worked well, I would
stay away from them if at all possible. They really pick up the
fuel pump noise of the vehicle I have found. My preference would
be a Wilson Lil' Wil magnetic, and stick it on the car and take
your chances with it scratching the paint. I used to lease my trucks
for the business and they always found something to charge you
for when you turn it in anyway, so a little missing paint won't hurt.

sparky@cet.com (Frank Gilliland) wrote:

> Some in the radio community have misunderstood common-mode currents
> (CMCs) and made it the scapegoat in many SWR witchhunts.

I agree that too much emphasis is put on these in this CB radio
discussion group. You probably won't have a problem with these if
you are a CB'er with a standard installation. You probably will
have confusion once these are dragged into the coax length debates.

> So at this
> point I would like to reiterate that CMCs are -not- currents that flow
> on the outside of the shield,

And you would be wrong again.

> but they can be one -cause- of RF appearing on the wrong side of the
> shield.

If you have RF appearing on the wrong side of the shield, I guarantee
that you have current on the same side of the shield. Maxwell's laws
require it. A magnetic field (part of the RF electromagnetic field)
will induce current in a conductor and vice versa.

> CMCs have a specific
> meaning in RF engineering, and I have included the relevant part of
> the definition in my page.

I don't know where your page is. You probably don't want me to see it.

[snip]
> The two most likely culprits are standing waves and poor grounding at
> the transmitter. Standing waves will directly induce RF onto the
> shield via coax containment failure, as I have pointed out in my page.

This is unequivocally false. In other words, total BS.
Where do you get this notion that standing waves cause "containment
failure"?

> And when the transmitter is not properly grounded (an RF ground) to
> the vehicle, the radio will 'float', and that will -most definately-
> cause CMCs.

More BS. The radio requires no vehicle ground. I could connect
a walkie-talkie with no vehicle ground whatsoever to the coax and obtain
perfect CMC-free operation.

> This is common where handhelds are used with a roof-mount
> antenna. But here again, just because RF currents are on the shield
> doesn't necessarily mean they are caused by CMCs. The difference is
> phase.

Hee hee! I had to giggle at this one! Are you a comedian?

Who says that common mode currents are common using a handheld with
roof-mount antenna?
How does phase make any difference?

> Since there is no easy way to detect CMCs, or even to identify them
> apart from any other type of shield current, the term 'common-mode

What the hell are you talking about? You cannot stick to the facts.
Your babbling all over the place. Look, this as (below) is what
started it all.

==========
Kris INC. TUBE AMPLIFER
$150.00

This is a 25-55 MHz (12-6 METERS) Tube Amp. I purchased it new about
a month ago but, it destroys my neighbors TV so my loss your gain!! I
was using it with a STOCK RCI 2950 and with 4 watts in I was Getting a
60-100 watt dead key (depending on how it's Tuned) with a 125-150 WATT
SWING!! I HAVE NEVER HEARD A AMP. AS CLEAN AS THIS ONE!!!

You Don't need a meter to tune up....it has a light on the front of
it...the brighter it gets, the more power it puts out!!
ï¿½
It Weighs about 25lbs,
It GREAT WORKING ORDER!!ï¿½

Shipping is paid by the purchaser, Money Orders only

*****"LEGAL" FOR AMATEUR RADIO USE ONLY*****
==========

The guy even put the word "legal" in quotation marks. LOL!!! Read it, and tell me if you honestly believe this guy is a ham selling a ham amp only to hams (in a cb newsgroup). You obviously do because you posted that opinion here. I thought you were full of shit and I called you on it. You attempted to defend the posting of a "27 mhz amplifier for sale" ad in a CB newsgroup and failed miserably. Now you're whining like a baby that big bad Voobner needs to be stopped and you want somebody to come to your rescue.

Sorry. The truth hurts.

I can't think of a reason why you'd need so much power (1500 watts) on
CB. It's illegal, of course. And it's antisocial behavior against your
fellow CBers that you share the band with.

>Yes I know its not legal on 11 meter nor ever has been. I do not

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

This radio was manufactured around 1977 give or take a year or two. I
own one just like it, got it from my aunt when my uncle passed on.
Radio has a really cool meter!

Regards,

Guntier

because youll never again have to replace that 45 dollar tube if its tuned properly into a good load. it is done to make the amp more bullet proof and not to increase the power output. i own a 4 tuber 811a amp myself that i am getting ready to retube with 572b's and replace the power supply to allow them to run full output. a friend with a ameritron 811a amp called them not too long to ask about retubing his amp with 572b's and the tech there told him to simply pop them in without any mods. if we listen to leland it would seem the techs at ameritron were lying or lelands just plain wrong

Here's one for the folks to "bat about."

I've heard that in the world of FCC enforcement, they need tape recordings or it never happened. In the immortal words of Robert Deniro, if you don't have tape..."you got nuttin!" If you submit to an inspection of your shack and all is found well and good, HOWEVER, you have QSL cards on display...is your goose cooked? What fo you think...does it depend on the dates (i.e. over 10 yrs. old) or the frequency (ch. 40 vs. 27.5050MHz) or does it not make any difference at all?

Bert you should post this to the "rec.radio.amateur.policy" news group to the attention of Phil Kane (K2ASP). Phil used to work for the FCC, now retired I think, and did CB radio busts among other things. He can give you the straight story of what exactly will get a CBer busted, and make it stick in court. Don't waste your time asking anybody here.

Hi Leland,

I was actually thinking about e-mailing Phil directly. To post it in r.r.a.p. is tantamount to inviting them to "tro me a beatin!" (My sad attempt at South Brooklynese...borough of my birth.) I know Phil will give me the "straight skinny" re. the matter, but that's too easy. Sometimes we forget about the "rec"reation part of these USENET groups and get a tad too heavy about things. This should be a nice one to, like I said, "bat about."

I never waste my time in this group. Sometimes it gets a little heavy and hurtful, but all in all I don't think anybody here really means any true malice. It may sound corny but if it's in my hands to help ANYBODY here, whether it be advise based on my humble experiences or whatever, I'll do it and enjoy it. I like to put topics out there that people can have some fun with. You've gotta admit, it was getting really hot and heavy on r.r.a.p. when I posed the "CW & 11 Meters" query. It diverted some angry people from hurling insults for awhile and allowed things to cool off. Well this question even has something in it for the most die-hard AKCers as well as the "freebanders," because in reality...there's probably no wrong answer. (...just varying opinions of what would actually happen.) Thanks for the pointer though, Leland.

>Well you answered your own question why Hams
>frown on CBer's like you.

If what you say is true, then how would you explain my purchasing said equpiment from licensed amateur radio operators? Obviously they care even less than I do about operating an amplifier on 27Mhz. For the most part, it's Hams that make these units available to the general public. This I know from personal experience, Leland.

Sounds a bit hypocritical to me.

If you quoted my full message, you'd note that the context of the above excerpt was directed to many of the amateur radio operators here in this forum. Your reply should read:

"Well you answered your own question why [some] Hams [within this particular usenet newsgroup] frown on CBer's like you."

This would be a more applicable response.

>"I grant you the illegality of such, but to be
>perfectly honest, I don't care."

>Just keep the above in mind when somebody takes
>your money, steals your ride, charges stuff to your
>ripped off credit card etc. They don't care either. It

Is operating an amplifier on 27Mhz a felony? Or is it the equivalent of Jaywalking?

If that was the case I wonder why they don't have a little 600 watt amplifier using just two 572Bs in there product line up, and why they used 3 811As. Two 572B tubes with sockets would cost about the same as three 811As with sockets. It's also much easier, and cheaper, to find two match tube pairs rather than 3.

> a friend with a ameritron 811a amp called them not too long to ask

The tech, you didn't personaly talk to, doesn't have to worry about trashing the neighbor's TV, phone, etc, nor paying any FCC fines if he's wrong either. 8-)) Did anybody think about asking the tech if the amplifier still meets specs using the 572B's, and has test data to back it up. 8-)) Hey just look at Ford and those so-called direct replacement tires they wanted to use. I'll bet some tire tech, at the manufacture, told Ford those tires were just fine too. You drive an Explorer?

How do you know that? Sure, a newsgroup is all about discussion, and
if people didn't respond to the posts of others, everyone would be
just talking to themselves. But how is it that you can predict just
what he will do next?

> Hell, this guy doesn't
>even have the backbone to use his real name in his postings which tells you
>a lot about his character.

Really? How do you know it's not his real name? And since when does
the use of an alias tell anything about a person's character? There
are many in here that just don't like to see their name up in lights,
but they will gladly provide their name in an email. So why does a
person that uses a nic on a newsgroup have no backbone?

> He's probably some PO'd guy that thinks because
>he's got his Tech ticket, he's automatically indoctrinated into the Navy
>Seal Special OP's.

First, how do you know he has a ticket at all? What's his call? And
what do the Navy Seals have to do with anything here?

> Probably watches too many Steven Segal movies.

How do you know what movies he watches? Personally, I don't give one
hoot about Steven Segal, so I don't really know what you mean by that.
Is it another Navy Seal reference? What do either of them have to do
with amps, or even CB for that matter?

>I am somewhat disappointed in the Ham contributors to this NG who don't
>actively engage this guy because although they might not realize it, he's
>also infringing on their free speech/rights as well.....If

How can any one person in this newsgroup infringe on the right of free
speech by another? Is there some sort of magic word or phrase that
will lock out someone's internet access?

>this guy is allowed to pull this stunt on this NG, what will stop someone
>else from getting away with the same on other radio based newsgroups?

What kind of stunts do you mean? Do you mean stunts like predicting one's future posting behavior, or making conclusions about the character of a person based on their nic, or assuming that someone is an licensed amateur without providing a call sign, or making comparisons to things that are totally irrelevant, or even saying that someone watches too many movies?

Yeah, those are some serious stunts -- I can see how such behavior can infringe on someones right to free speech.

It was clear that the intent of the OP was to sell the amp regardless of the legalities. 47 USC 2.815 is pretty specific, and exceptions apply only after the transaction has been completed. Also, check out paragraph (d):

"...shall not apply to the marketing, as defined in paragraph (b) of this section [offer for sale or lease (including advertising for sale or lease)...], by a licensed amateur radio operator to another licensed amateur radio operator..."

The advertisement did -not- indicate that the seller was a licensed amateur, the ad was posted in a CB newsgroup, -not- a ham newsgroup, and did -not- indicate that he was offering it for sale only to a licensed amateur. It's obvious that the amp was being offered for sale to anyone, licensed or not.

Not only that, but if you read the ad, he begins by saying, "it destroys my neighbors TV", but a few words away he says, "I HAVE NEVER HEARD A AMP. AS CLEAN AS THIS ONE!!!" Not only is that a contradiction, but he is aware that the amp puts out enough noise to cause harmful interference. Yeah, real legal.

- - - - - - - - -

So now, in this post I just wrote, did I infringe on your right to free speech in any way?

Putz.

CLP is just trolling. He can't reference anything he says, and if you argue with him long enough he will get tangled up in his own stories and start contradicting himself. It was fun the first time, but I'm not going to waste any more time with him. You can if you want, but the group will get tired of it real fast.

I don't know if it still does this, but when you intalled AOL's
browser, it would disable any other browser you had. AOL got dinged on
this in federal court for software tampering. I'm sure there are other
complaints, but that's the only one I'm aware of.

6319. Portable antenna quandry

Newsgroup: rec.radio.cb
Date: 2001-07-31 01:03:21 UTC
From: Bob Wennerstrom <bobwenn@frontier.net>
Message-ID: <3B6603D8.84198772@frontier.net>
Source record: 90404

I've been tooling around town listening to the truckers lately with various garage sale CBs and low quality mag mount antennas. I want a better antenna but I really don't want to drill a hole through the roof of my truck. I've read a lot on the web about antennas and I've narrowed it down to a couple of choices. I don't mind drilling a hole in the top rail of the bed so I've thought about getting a 5-6 foot top loaded whip like Firestick and mounting it behind the back window. Also am considering a high quality mag mount like Wilson 1000 or K40 and mounting it on the roof.

Any comments on my choices or other ideas to improve my receive range?

Thanks,
Bob

You seem to be laboring under a misconception. I'm not here to "enforce" anything and never said I was. I simply offer my opinion, and in this case, my opinion is that the for sale ad in question is for an amplifier covering 11 meters and its target is obviously unlicensed CBers. My opinion is also that such behavior is sleazy and dishonest. You are certainly free to continue to dispute this issue if you like, however I remain unimpressed by your efforts so far.

6326. Re: QSL Cards vs. Tape/FCC Monitoring?

Newsgroup: rec.radio.cb
Date: 2001-07-31 02:38:20 UTC
From: qrm2000@aol.com
Message-ID: <20010730223820.09442.00002075@ng-fa1.aol.com>
Source record: 90412

>
>I've heard that in the world of FCC enforcement, they need tape recordings or
>it never happened.

Times are changing.

Some of the items you see in the FCC enforcement logs were not based upon tape recordings. In one recent case, a courier service driver was asked to explain how he was followed by observers with DF units as he made his rounds over a four county area. The jamming of 2-meter repeaters followed him exactly, AND coincided with his work days vs off days. In answering the FCC, the driver claimed that he had no 2-meter equipment in the vehicle. However, photos of the truck clearly show antennas which approximate the dimensions for 2-meters.

Meanwhile, on July 19th, some truckers fired up new export radios which they'd purchased and were using on 28.085 AM. They begin transmitting at 10:30 in the morning and were immediately detected by volunteer monitors in the area. By 1 PM, it had been determined that they were engaged in local commerce. By 3PM they had been located and the vehicles identified by trucking company lettering on the cab and by license plates. By 8:00 the next morning, the information was in Riley's hands.

About the same time, someone "jammed" a popular wide-area VHF repeater with a weak signal on the input, causing the repeater to time out. Although the transmitter was in a moving vehicle, a DF unit located it in 30 minutes. The operator claimed his radio was "stuck on" without his knowledge. Over the next week, similar situations were observed, but no tracking was done due to other committments. However, it happened again last week at a time when the DF van could go mobile. The signal was moving and then stopped in a large shopping mall parking lot. The DF unit went straight to the car and the driver was located in an adjacent store. It was the same driver as in the previous incident, but in a different automobile. Whereas the first incident was felt to be unintentional, it began to appear that the operator was "testing" the DF unit to see how well it performed. A full report has been sent to Riley. By the way, the elapsed time from DF activation to turning off the transmitter: 21 minutes.

I realize this does not answer the question about incriminating QSL cards. But the point is, enforcement is evolving all the time. Want to argue with a Transmitter Fingerprinting Unit? A video showing that each time you pick up the microphone, the interference is heard in the monitor?

Or how about this lame excuse? In several instances, jamming was traced to, say, a parking lot. When an individual with a radio was found at the scene, he claimed that he, also, had been searching for the interference and just happened to get there first. Several times. With only a handheld. And with no

history of ever participating in local foxhunts for practice. And he beat a $2,500 DopSys doppler DF unit each time. Can we talk about oceanfront property in Arizona?

At a minimum, the things described above can serve as preliminary evidence to develop a list of suspects. Then the REAL evidence-gathering can begin. And you won't know it's happening. It can take a long time to document everything. Keep in mind that FCC fines often are expressed in dollars per day. So while evidence piles up, so does the fine.

Back to the QSL cards. Not enough to "convict" you, probably. But enough to indicate that you bear observation. Maybe, just maybe, you are the one interfering with Matilda's TV set next door!

This is not a commentary against anybody or any operating practice/equipment described in rec.radio.cb. It's just an attempt to answer the original question by saying, "enforcement ain't what it used to be!"

Actually I did, and it turns out that he is the same class of amateur
that many like yourself are so fond of trashing. Your facts are in
error.

> If your
>going to enforce rules, make sure you actually know what the rules are
>instead of looking like pompous asses.

Sure, just like you do here?

>Part 97 clearly states =
>that it is the burden of the purchasor to investigate whether the =
>selling source is reputable and legitimate.

I have never heard that before, except where it is the station
operator's responsibility to make sure the station is operated
legally. Where in Part 97 does it -clearly- state anything about any
burden being on the purchaser?

And what about this:

>The only time a licensed amateur
>must conform to type acceptance regulations is when the amateur is
>attempting to market multiple amplifiers to the general public.

Where does it say that anywhere? I can show you sections in part 97
that tell how and when an amateur is supposed to get his equipment
certificated, but I don't remember any part that says he needs to
worry about it -only- when he is mass-marketing amps. Can you clear
that up for us?

And while we are on the topic of legal interpretations, why don't you
explain how Voobner was infringing on the right of free speech by
anyone else? (hmmm...., didn't I ask that somewhere before?)

So why don't you straighten me out on those rules before you start
tossing around terms like "pompus asses".

>In closing, Ill tell you what I told Aaron.....

No, I'll tell YOU that if you are going to push someone to put up some proof of their accusations, you better be prepared to do the same, or you should expect to get labeled as a hypocrite. Now then, back to my previous post, how do you know that Voobner watches too many movies....?

You sure do like to use that word 'probably' a lot, huh? Well, I can
use it, too....

You probably don't have a clue as to what I know or don't know.

You probably have nothing better to do than to make lame assumptions
about the extent of my vocabulary (or anything else about me).

You probably don't know as much as you think you do about FCC rules
and regs.

You probably don't know the difference between 'accuse' and 'indict'.

You probably don't have a clue about free speech, since everyone in
this newsgroup practices it with every post.

You probably are just complaining for the sake of arguing, because you
didn't give any indication that you understood one word of my post,
not even the word 'putz', and

You probably are just another keyklown whose only interest in the law
is avoiding prosecution for it's violation.

You know, I'm probably just wasting my time, because you probably
don't have enough brains to know that you are probably going to run
out of legs to stand on, and probably real soon, too. So you should
probably take the advice given to so many in here when a flame war
erupts and avoid the issue altogether. If not, you probably will end
up in a lot of killfiles.

And just to clarify, nobody is infringing on your right to free
speech. In fact, I encourage you to speak your mind on the subject.
You probably would never understand why....

Wheres your proof? Please post your prook Frank...or cant you??.......He (the seller) is an amateur which means he has every right to sell his amp to another amateur. His amp was also manufactured prior to 1978 which the KRIS amp IS on the list of FCC type accepted amps. Get real Frank. You can try to be Voobners tag team partner on this one but your only embarrasing yourself.

>
> >Part 97 clearly states =

> legally. Where in Part 97 does it -clearly- state anything about any
> burden being on the purchaser?

Of course you've never heard this before because you guys dont read before you accuse. Part 97 Rules ?97.315 Sections (b), 3, 4, and 5 CLEARLY states that if one amateur sells his amp to another amateur, they both have to be amateurs. How does one find out if a seller or buyer is an amateur, they ask. The burden is on the parties to comply with the law. Its not on the buying/selling parties to prove anything to you and Voobner. CANT YOU READ??????

> And what about this:
>

Because AOL has snail mailed to damn near every home in America and they all sign up for this internet thingy the news is always talking about. Most of the people that use a normal ISP want to be on the internet and know why. Most people on AOL(not all) are there cause they got this disk in the mail some years back and it made pretty colors on their PCs.

Hi Bert,

IMHO I don't think the FCC is going after CB DXers. They will go after bigger "problems". Let's say, theoretically, they have complaints about a guy called TRAIN. Let's say this TRAIN is selling illegal CB amps on the internet, and furthermore has posted a lot of hooey about how he dares the FCC to catch him. Now, for arguments sake, let's say that the FCC has gotten a lot of complaints from concerned citizens about TRAIN. Along with these, they will collect a backlog of evidence against him (for sale ads, sales to agents posing as customers, etc). I would say that when the agents come to his home to serve the search warrant and confiscate illegal goods if they see QSL cards on the wall they will probably be ignored in favor of the more serious case they have against him. Of course this is all just theoretical. - Aaron

Might it have something to do with AOL's "privacy policy" which does
more to protect SPAMmers, abusers, child porn mongers, and the like,
than it does to protect its users and the general public?

You be the judge.

I didn't know that I needed proof to post an opinion. Hell, twistie
does it all the time, and you do it quite a bit yourself. Funny that
you didn't want prook [sic] of the seller being an amateur, which
wasn't an opinion at all.

Yes, and I still can't see where it clearly states that "it is the
burden of the purchasor to investigate whether the selling source is

reputable and legitimate." Maybe it's not as clear as you say, since
you doubled back and revised your statement to say "The burden is on
the parties [pl] to comply with the law." So where does this burden
rest, on the purchaser alone or on both parties? And if it clearly
says that the purchaser takes the blame, where does it say that?

>> And what about this:
>>
>> >The only time a licensed amateur

97.315, 97.317, and Part 2 subpart J. All that stuff is about
equipment authorization for any radio service, including amateur.
Jeez, you sure walked right into that one. BTW, what happened to the
rest of my paragraph? Are you now resorting to selective snipping? You
probably forgot what the discussion was about, so I'll just refresh
your memory. You said:

>> >The only time a licensed amateur
>> >must conform to type acceptance regulations is when the amateur is
>> >attempting to market multiple amplifiers to the general public.

And I said:

>>Where does it say that anywhere? I can show you sections in part 97
>>that tell how and when an amateur is supposed to get his equipment
>>certificated, but I don't remember any part that says he needs to
>>worry about it -only- when he is mass-marketing amps. Can you clear

Hmmm, yes, after that clear and concise explanation, I believe I can now see how Voober infringed on your right of free speech. How could I have been so blind not to see the logic before you so vividly pointed it out to me. Yes indeed, Voobner infringed on your basic human rights by writing something in a newsgroup that you just happened to disagree with. Omigosh, sound the alarm! The fate of the Constitution hangs in the balance....!!!!

>> So why don't you straighten me out on those rules before you start
>> tossing around terms like "pompus asses".

Before you break out the champagne, let's review. Here's my original
post:

>That's no "amateru" amplifier and you know it. It's a CB amp
>advertised in a CB newsgroup. How do you justify being such a sleazy
>liar?

I still feel the same way. I'll say it again: the ad was obviously
intended to sell an amplifier to a CBer and I think the poster is a
sleazy liar.

Note that my original comment was addressed to "fatman", the original
poster of the ad. But since he apparently prefers to remain incognito,
Paul dove in and took it upon himself to "defend fatman's honor" (or
defend KRIS's honor, or...whatever).

Anyhow, before I can "admit my terrible error", you must:

1. Show me I am violating anyone's rights with my comments to fatman.

2. Show me where I have made an "outright criminal accusation".

3. (And since Paul also mentioned that I am "enforcing" FCC rules)
show me where I enforced FCC rules, or ever said I intended to enforce
FCC rules.

Jeez. If I didn't know better I'd say some of you guys have guilty consciences. (You know the old saying; "the wicked flee when no man pursueth"....)

I'll chime in a bit too. I enjoy having the strobes. My vehicle is a
"slick-top" with all the lights contained inside the vehicle (no lightbar).
All of my lights are strobes including one in each of the reverse lights.
This causes them to flash clear which is extremely bright. Even if it might
be obnoxious, it causes vehicles approaching me to slow down to see to go
around. That makes it safer for me so I don't have motorists flying by.
Most of the other vehicles we have use the MX7000 lightbar which is bright
enough in itself, but is supplemented with strobes in the taillights and
reverse lights. It's bright as hell, but causes oncoming and passing
vehicles to slow down to see around it.

Why? I didn't set any example. I agree with Voobner. I think the
seller is being consciously deceptive with the advertisement, not only
to the FCC but also to the prospective buyer. If that's the same thing
as being a sleazy liar, then I won't disagree.

>Perhaps your example will teach Voobner that he has no right to

>some years back and it made pretty colors on their PCs.
>

Thank you for including a disclaimer ("not all"). I love the fact that I can click one button and see how many messages are waiting in the seven mailboxes, instead of having to log onto each mailbox separately. We use all seven, which allows us to divide work mail, hobby mail, etc.

It is much easier to respond to messages with AOL. You simply highlight the applicable text, click REPLY, and only that text goes in the new message. Probably OUTLOOK will do this, but I've never mastered it.

>Most of
>the people that use a normal ISP want to be on the internet and know why.

As with anything new, there are the "pioneers" who are the first to embrace the technology. They are followed by a next generation which enjoys technical matters. Eventually, the process comes to the masses. For instance:

Radio. Early days--build your own and spend hours adjusting six knobs in order to get a signal. Later--buy a radio with only two knobs: tuning, and volume.

Automobiles. Early days--build your own. Next generation--buy one, but you'd better be a mechanic to keep it running. Later--more concerned over the color and how many watts in the stereo than how many horses in the engine.

With 26 million subscribers, AOL obviously appeals to folks who need/want Internet access without a lot of fuss. The members of my family are a good example. They want to log on, do their thing, and not have to worry about the wires and buttons. Meanwhile, one family member (16-yrs old) would absolutely DIE if something happened such that she could not use IM to keep up with her friends! (grin)

>is mag mount ok?
>

They work okay, and are especially valuable when:
(1) You don't want to poke holes in the vehicle;
(2) There is no space for a lip mount (like on top of the pickup's cab);
(3) You move from one vehicle to another. (Rental cars, etc.)

>what antenna is good?
>

The makers of the K-series and the Wilson's are in a battle to see who builds the best antenna. As a result, both are VERY good.

>whats a good range?

This varies greatly, depending upon numerous conditions. When I'm on the Interstate, I have no problem communicating 3 miles with stock gear to a Wilson 1000. If you're talking to a base station with a good antenna, the range is greater. If you use SSB, the range is greater than AM. (Obviously, there are channels like 19 where you need to stay on AM).

In my case, I am interested in listening for road info on the Interstate. I find I can hear farther than I can talk. (Thanks, guys. I ALREADY know how to fix that--grin).

This most likely has to do with the fact that AOL was the first large commercial ISP to offer internet access to "the masses". Before that the internet was the playground for those of us who either were in college, or worked for companies that were connected to "the backbone". Many of those "techies" resented the fact that their exclusive playground was being overrun with computer neophytes, that really didn't understand what they were dealing with. This is sort of the same resentment that some hams feel toward CBers. Anytime the established order (That somehow feel they "earned" the right to be there) is threatened by newcomers that had to do nothing but write a check, you get the same prejudice. Now AOL'ers say the same thing about WebTV users so the cycle goes down the food chain as well.

ROTFLMAO!!! More of the same eh Frank?? No posting by you of any proof or any actual regulation concerning the sellers posting being illegal. Are you finally beginning to realize there are no straws left to grab. Just admit you're wrong, its ok Instead of spouting out statute numbers, why dont you actually post the text from the statute (like I did) thats the game winning substantiation to your accusation. At least that way I may have forced you to actually READ the rules.

I must say you and Voobner are very consistant, almost too consistant. Since guesses are the modus operandi on this NG, let me make a wild guess, 2 NG identities 1 person????? Not that it matters of course, this is just entertainment for me. Just curious.....

The same could be said about somebody under age who gets a 6-pack at the local 7-11, proceeds to get wasted, and then gets involved in a fatal auto crash while driving drunk. You can find examples everywhere how various laws are violated, but like the drunk above, telling the judge he/she can't be held at fault because the store illegally sold them the booze just doesn't wash. Everyone is responsible for their own compliance to the law irrespective of what others do. The old excuse, "everybody else is doing it", didn't wash with your parents when you where a kid, and I see no reason why that would change with age either.

There are much better ways to consolidate email. Outllook and outlook Express both have abilities to sort incoming mail to different folders and filter out the email you don't want. You can have multiple email accounts that send/recieve at the same time. You type in who a new message is to and then you can choose from what email account you want it to come from. Same thing goes for procmail which works quite nicely with pine for all the mailing lists I subscribe to for security listings, bugtraq, etc...

AOL'ers have to understand that their service isn't as peechy keen as it appears. You get dropped all the time. You have policies forced upon you in a comunistic way. You only have one choice for how you get your email too(THEIR WAY).

The AOL service is the largest and most popular for your average American. I sure hope it doesn't show how intelligent Americans are. Internet and CB go hand in hand sometimes because people are hiding behind something in both cases. Keyboard for one and the mic for the other. They think they are anonymous and can't be found so they stir the shit up with basically no repercussions. It's the people that take it too far and don't know when to quit that are getting the threatening smail mails or mail bombs or the friendly knock on their door from the local shotgun owning nut case. <--WHoa what a tangent I got off on!!

When I send a message from the hobby account, it puts the business account in the "From" field. Responses therefore come back to the business account rather than the hobby account. Can this be fixed?

Hello & Good Morning,
What I have heard that when you use
all of AOL features it is very simple to use.
I have never used AOL only Netscape
and Outlook, but most people that have
AOL like the ease of e-mail IE: multiple
mailboxes for all the family, easy e-mail,
child filter and such.
I have also heard that a lot of people
use them just because they have a lot of local
phone #'s, so that makes it easy for dial in, then
use what ever browser they like.
I do believe they are the largest due to
the fact that they send all those disks out to
every house hold in America and certain
parts of other countries.

From: Rick Ruhl <ricker@cssincorp.com>
Message-ID: <TGB97.2288$jL6.394103@e3500-atl1.usenetserver.com>
Source record: 90457

Log Windows 3.07.34.01 released!

Update adds support for voice packet spots and parallel port devices under Windows NT, Windows 2000 and Windows XP, MARS and 11 Meter Support!

Muscle Shoals, Alabama. July 30, 2001: Creative Services Software announced that version 3.07.34.01 of the popular logging program Log Windows has been released. The release includes fixes for the M2 Rotor, 1.2 GHZ support for Kenwood's new TS-2000, 32 bit calls to allow voice packet spots and parallel port devices access under Windows NT, Windows 2000 and Windows XP, and frequency support for both MARS and 11 meters.

"Putting MARS and 11 meter support in will allow those users to log nets and log contacts with their friends", said Rick Ruhl, W4PC, "This is the first version that we have released that will only install under Windows 95 or greater. We'll still have 3.07.34 available for those running Windows 3.1, but that is our last release under 16 bit Windows"

With Log Windows, CBers who plan to move into ham radio will only have to purchase one logging program to go between the two different services or they can just use it for CB only.

The product retails for $69.95 and upgrades from release 3.06.15 or earlier is $40.00. Those who have purchased version 3.06.50 or greater will get this upgrade free. It also appears on the Digital Trio CD. It is available from dealers around the world, as well as direct from CSS.

Log Windows is owned by SCO, Inc and is maintained by Creative Services Software.

Creative Services Software is at http://www.cssincorp.com

The Log Windows homepage is at http://www.logwindows.com

Windows, Windows 95, Windows 98, Windows Me, Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

I don't got a data sheet for this, but have worked out the following from
Jackson / Grant cct diags etc.

Pin 1 Audio input
Pin 2 Feedback (often used for muting)
Pin 3 Decoupling
Pin 4 GND
Pin 5 Audio output
Pin 6 Bootstrap
Pin 7 +ve supply

I Hope this helps.

They do not. Cell phones and microwave ovens are not even close in
frequency.

> Older 49 Mhz cordless phone are
> much less of a concern.
>
> Microwaves resonate at the molecular level.

Technical gibberish. Microwaves don't resonate.

Molecular bonds resonate. Some bonds resonate at microwave
frequencies. Many resonate at UV, visible light, and infrared
frequencies.

To be safe, we should turn off all our lights and sit in the dark.

... Rich

I'm not convinced that cell phones are dangerous. While I might agree that the frequencies the common cell phone operate on (800 mhz.) will produce tissue heating in the eyes and other equally sensitive areas, I haven't seen any evidence to support any "real" lasting negative affects. The output powers of an 800 mhz. phone can approach the 1/2 watt level at full ouput, however this power level is generally never maintained as there are numerous cells throughout most cities which, according to proximity, instructs the phone to lower it's power considerably.

The PCS phones are the units that operate nearest the microwave oven frequencies but the output power of these units is so low that, in my estimation, it's insignificant.

In scanning the results of several studies I find, what I consider, a rather remote possibility that any of these phones are responsible for health troubles.

> get togather every now and then.

Check out the Australian Govt CSIRO report on
this kind of effect:

http://www.electric-words.com/cell/csiro/title.html

Sections 2.4.1 and 7.1 describe something similar.

Others have reported "hearing" microwaves which
were broadband or pulsed. If you
think the report fits what you experienced, I'd be interested
in any details you (or buddies) can recall: Length of

time before hearing it, did the sound vanish as
soon as you left the area? How big was the antenna?
How far away? (please, nothing classified)

I call this kind of
effect a temporary "tinnitus", because the "sounds"
caused by the radar are reportedly similar to those
experienced by tinnitus patients; however, real tinnitus
usually only occurs after a physical injury causes
damage to the inner ear.

Thanks for the link: I had not visited this site for
over a year.

I could barely read the tiny graphics, but I believe the
AF dosimetry handbook I referenced in my paper
covers the same material (and more).

These standards actually are under revision, because they
don't apply very well except to narrow-band, tuned
transmissions. You should read

http://xxx.lanl.gov/abs/physics/0102007

for details. The OSHA approach, to the extent I
understood it, actually is not sound
scientifically, but it has worked in the past
fairly well--mainly, I think, because there was not
much variety or diversity in the transmitters to
which the public might be exposed.

My microwave works at 2,450 MHz. My analog cell was 806-896 MHz. My digital works somewhere between 1,800 and 1,900 MHz as pulses of power.

This may be true, but to use this method of calculation, one must know if I put only that much water in, or if it was originally full.

If I had put 225ml in that 300ml bottle then emptied 75ml, can it be considered as half empty when I have not yet emptied 1/2 the original contents?

>HEARD A AMP. AS CLEAN AS THIS ONE!!!" Not only is that a
>contradiction, but he is aware that the amp puts out enough noise to
>cause harmful interference. Yeah, real legal.

I believe that meets your standards, and it also quotes the text of
the regulation. Or have you forgotten it already?

Now, you have left many questions outstanding, and some of them have
been asked more than once. Why do you continue to ignore such simple
questions? Two of them deal with FCC rules, and after all your
bragging about how well-versed you are on that issue I would think
that those should be easy to answer. Since you place such a high
priority on admitting fault, perhaps you could answer them and provide
a good example to the rest of the newsgroup. Or maybe you don't know
shit, and can't live up to the standards you hold against others in

the newsgroup. Naw, that can't be the reason, because that would mean you are just blowing smoke.

So show us all that you aren't just full of shit and answer the questions. Just in case you get confused easily, I'll narrow the pool down to three questions:

Question #1: Where in Part 97 does it clearly say that "it is the burden of the purchasor to investigate whether the selling source is reputable and legitimate"?

Question #2: Where, in any part of FCC regs, or USC for that matter, says that "the only time a licensed amateur must conform to type acceptance regulations is when the amateur is attempting to market multiple amplifiers to the general public"?

Question #3: In what way has Voobner's posts infringed on your's or anyone's right of free speech?

These questions shouldn't be that tough for a smart guy like yourself, especially since you know the law so well that you can confidently tell others that they are ignorant. Well, show us just how ignorant we are, Paul. Quit blowing smoke and answer the questions.

>I must say you and Voobner are very consistant, almost too consistant. Since
>guesses are the modus operandi on this NG, let me make a wild guess, 2 NG
>identities 1 person????? Not that it matters of course, this is just
>entertainment for me. Just curious.....................

Be careful, since you were the one that said, "No, facts are facts and guesses and guesses."

6384. 10 Meter conversion for Mirage 88

Newsgroup: rec.radio.cb
Date: 2001-07-31 19:02:36 UTC
From: Terry <terry@mindstate.nospam.com>
Message-ID: <3b6703d3$1@news.isdn.net>
Source record: 90472

Hi folks, I am looking for advice about converting a Mirage 88 "Export" radio to cover most of 10 meters. I have come up with a plan, but I am no radio expert.

The radio I have uses the MC145106 PLL chip and has a 14.010 Mhz "downmix oscillator". It as 8 band settings and the highest frequency it can go to now is 29.205. I am thinking about changing the downmix oscillator crystal to 14.450 Mhz.

According to my calculations, I should be able to get the radio to go up to 29.645 while loosing 440Khz on the bottom end of the radio.

Does anyone know if this will work, or if I will have any other problems by changing the downmix oscillator?

Thanks!
-- Terry

>PS: Dont burn the carpet with that cigar.

Let's see now, Reptile/Crybaby/Whiskey/Helmut has used his real name,
I use my own name, Voobner uses his, Leland uses his, Doug (in his now
infrequent posts) uses his, etc. Flip the coin and you have
twistedhed, landshark, moparholic, Aaron Boobner, etc. And if that
isn't enough, you have also suggested that I am Voobner.

It looks like you have this whole identity issue backwards.

paul, ... voobner = frank, that is frank's alter ego. he uses a lot
of aliases. he is a pissed off ham radio technician class type who
hangs around here trying to impress everyone with his 'incredible
knowledge'. i mean , if you want proof , look at that bullshit webpage
he published about impedance , etc. full of half truths and over
simplistic incomplete theories. i can only think that these assholes
or this asshole which ever the case may be, just hang around here
because he has one foot in cb and one foot in ham and he doesn't know
where he belongs. hell if he talked this kind of crap on
rec.radio.policy they would ride him out of town on a rail. he is here
because this is the only place he feels confortable spreading this
kind of senseless argumetation. all he does on here is argue and try
to find someone to argue with and this has been going on for about a
year. it has always been constant bickering about finite points of law
concerning fcc rules and regulations. and to tell you the truth, this
guy must not have a happy marriage or something.........

Frank do yourself a favor. Spin your wheels on something more productive because the more you attempt to dissect my statements, the more inept you end up appearing. You've told me 3 times that I was wrong and that you are right, and 3 times Ive asked you to post evidence to your claim.....and still nothing. You guys intentionally miscite and quote only the rules that you think apply, however both you and Aaron casually leave out subordinating regulations that are clearly contra to your accusations. Thats not how the law works. Are you both that upset that someone called you on it? You must be because its painfully obvious that this thread has pissed you off bigtime. You shouldn't shoot the messenger because you hate the message.

Ill make a deal with you, you cite the FCC Part 97 rules or any other US law for that matter that unequivocally states that the seller of the KRIS amp that was for sale in this thread was in fact an illegal sale, and that any qualified person selling any amplifier on a CB Newsgroup is illegal, Ill answer whatever nonsensical questions you what to throw at me. As then, and still now, the burden has been and remains on you.

PS: The FCC Type Acceptance list denotes the KRIS amp in question as having full type acceptance and approval on January 15, 1975 Reference # 139569. Do some reading......for a change.

Until then, save the strength in your fingers.....

I see where some DaveMade amps were popped on eBay. The seller was
calling them "ham radio amplifiers". Maybe you ought to change the
name of this thread to "D&A Amateru Radio Amp" since I am sure you
guys ALL have ham callsigns and are going to use the amp ONLY on
authorized amateur frequencies, right? -Aaron-

Peter, The amount of water you put in should make no difference the bottle only holds 300ml so 150 ml is half of that so in essence the bottle should be 1/2 empty or 1/2 full with that level of water is inside depending if you are filling or emptying the jug.

Hi Bert,

>If you submit to an inspection of your shack and all
>is found well and good, HOWEVER, you have QSL cards on display...is your
>goose
>cooked?

Although I honestly don't think The FCC busts people for violating the 155.3 mi. rule anymore, those QSL cards could be construed as "evidence." So I'd imagine the answer would be a technical yes.

>What fo you think...does it depend on the dates (i.e. over 10 yrs. old)
>or the frequency (ch. 40 vs. 27.5050MHz) or does it not make any difference
>at
>all?

I'd venture that a visiting field agent would be more forgiving on the legal forty as opposed to "freeband" frequencies. Many of my QSL cards also indicate power. I'd think 100 watts and up would also be frowned upon.

Then again, it could all be academic and solely depend on the disposition of the agent in question. (All other aspects of the station being "right as rain.") After all, I know a friend who bought his second export rig, a President Jackson, from an employee of the FCC. (They went to school together. It appears that not ALL confiscated gear goes to the trash compactor.) Remember, you're dealing with human beings with all their strengths...and weaknesses. An inspecting agent may merely smile and encourage you to get a ham ticket if that's your thing. Take care and 73.

Rather than attemting to rework a cb that is poorly designed, take a look at the 10 meter radio at RS. They are built well, 25 watts out, rock solid - never wander and inexpensive.

Hello Terry: Yes this will work just fine, I believe.

If you kick around the CB Mod web sites I am sure this can be confirmed.

I had a Motorola Military radio that I converted to CB by changing the
PLL and VCO around a little, and retuning the output. Also tweaked the
receive RF amp and first mixer, input frequency, and it worked great.

The manufacture may even be able to tell you exactly how to do it.

Jay in the Mojave

Hi Bert,

You can count me in and you won't have to span the distance between L.I. and NJ. I've accepted the transfer and we closed on a home in Port Jefferson. I believe we're fairly close neighbors now. I'll be more than happy to work the two of you (and anybody else) on 27.1250MHz CW. 200 milliwatts should be just fine. Went walking around the harbor in the evening, really really beautiful. I guess I'm officially a L.I.er. :-)

Perhaps we can even carpool? I'm not overly comfortable with the commute yet. I'll follow this post/e-mail with a separate e-mail. I may need your help in procuring one of those 11 meter QRP CW rigs. (I'm not much of an ebayer.) Take care and 73.

Mark

In the words of Dick McCollum, N0BK..."damfino!"

I would imagine the answer to be a resounding, or should I say resonating, YES!
Take care and 73.

Mark

Well, IIRC the RS rig does not have FM. This radio works just fine, right now I am using it to copy PSK-31 on 28.120 USB, but I wanted to be able to monitor the FM calling freq.

I never heard anyone call the Galaxy clones "poorly designed" ;)

Thanks for the advice,
Terry

>Frank do yourself a favor. Spin your wheels on something more productive
>because the more you attempt to dissect my statements blah blah blah.

I'm not dissecting anything. I keep asking the same questions over and
over about statements you made and claimed to be factual, but you keep
ignoring those questions. On the contrary, I stated an opinion, and
when asked for the reasons for my opinion I gave them. Twice. You seem
to think that I am Riley himself and that I am sending out a NAI on
the newsgroup. As you say, "thats not how the law works."

>Ill make a deal with you, you cite the FCC Part 97 rules or any other US law
>for that matter that unequivocally states that the seller of the KRIS amp
>that was for sale in this thread was in fact an illegal sale, and that any
>qualified person selling any amplifier on a CB Newsgroup is illegal,

I have never said anything of the sort. If you read my previous posts
in similar circumstances you will see that I either make conditional
statements or simply state my opinion. However, if any person wants to
admit to certain violations, and some have, I can accept those
admissions as factual. The OP made no such admission, and I have
presented only my opinion. You can tell the difference between opinion
and certainty, can't you?

> Ill
>answer whatever nonsensical questions you what to throw at me. As then, and
>still now, the burden has been and remains on you.

I have no burden of proof, and I even went one step beyond to explain
my opinion. You were the one making factual statements of law, and you
made them before I joined this thread. Now you are ignoring every
question about those statements, questions that were asked even before
you asked me for proof of my opinion, which I have since given. Nope,
there is no burden on me at all. Quit ducking the questions.

Heck, I'm so nice that I'll even reduce the pool down to ONE QUESTION:
In what way has Voobner's posts infringed on your's or anyone's right
of free speech?

>PS: The FCC Type Acceptance list denotes the KRIS amp in question as having
>full type acceptance and approval on January 15, 1975 Reference # 139569. Do
>some reading......for a change.

I never said it wasn't type-accepted. Why do you keep pushing that
issue?

>Until then, save the strength in your fingers.................

.....and allow you time to search through Title 47 for anything that supports your statements? OK, I'll wait.

Thanks Ken. Maybe you can help me out. I don't understand why
rec.radio.cb is suddenly the preferred forum for hams to meet and
discuss amateur 10 meter operation.
